Can You Tell?

Group No. 12

- Who wrote the words of America?
- What is a Pastoral?
- Where and when was the first song recital given in America?
- Who composed the oratorio, Creation?
- For what is each of the following musical artists famous: (a) Rosa Ponselle; (b) Paderewski; (c) Kreisler?
- In what opera was the song, O Promise Me, introduced to display the talent of a popular singer?
- Who wrote the well-known piano piece, Last Hope?
- What is the English equivalent of "Der Freischütz" and who composed this opera?
- Who wrote Aloha Oe (Farewell to Thee), the popular Hawaiian song?
- Identify the following theme:

TURN TO PAGE 419 AND CHECK UP YOUR ANSWERS.

Save these questions and answers as they appear in each issue of THE ETUDE MUSIC. Maximum number after month, and you will have one entertainment material when you are host to a group of music-loving friends. Teachers can make a scrap book of them for the benefit of early pupils or others who do not by the expiration time reading table.

The Musician and the Fly

By S. G. ARTELT

HENRY T. FINCK'S "The Golden Age of Music" is full of interesting things, including a warm eulogy of Theodore Thomas who did so much splendid pioneer work for symphonic music in America. Thomas, however, had enemies as well as friends.

"He was often treated (by the critics) with downright ferocity," says Finck. He tells us also that "When Thomas brought his admirable Chicago Orchestra to New York it proved a tremendous success, financial as well as artistic—a success which I recorded glowingly. But a certain set of critics felt on him like a pack of wolves."

But in spite of attacks and disappointments, Theodore Thomas possessed a

lively disposition, and "when things went well, as they often did, he enjoyed life hugely." Finck continues, "I remember seeing him try to climb a lamp-post (Wagner used to stand on his head) long after midnight. And with what zest he used to relate funny incidents! Let me close with one of them.

"At a rehearsal the chief trombonist (who was near-sighted) startled Thomas by hurling out a tone horribly out of harmony.

"What on earth are you doing?" yelled Thomas.

"Excuse me!" the player begged. "I didn't have on my spectacles. A fly sat down among my notes and I played him!"

Maxims for Pianoforte Students

By J. C. LANGLEY

- I must come to the piano with a free mind.
- I must let rhythm come first in my playing, for music without time is music without sense.
- I must have my fingers, wrists and arms relaxed. (To practice relaxation, do the following exercise: stand erect with the left arm horizontal. Bring the right hand down smartly on the left knuckles. This will cause the left arm to swing limp to the side of the body, as if dead. It is relaxed.)
- I must understand all the Italian words, letters and signs which are printed

over the music and give them their due observance.

When studying a new piece I must omit the easy bars and practice only the difficult ones. Perfection in all parts is then obtained.

I must often practice slowly. Slow practice is sure practice, for errors are not so likely to creep in.

I must often practice separate hands, beginning with the left hand, giving it the most attention and never allowing it to slip a note.

I must frankly criticize all my efforts.

The Matter of Hour Lessons

By SARAH A. HANSON

The half-hour lesson, or one only slightly longer, is satisfactory for most pupils. They do not tire, and all the practice necessary can be got into that period. Also it is easier on the teacher.

For a backward pupil the hour lesson may be more advantageous, it being then in the nature of practice-work. Also it is

good for one who can absorb much and who is ahead of the average pupil, as well as for him who is preparing to teach and who needs the hour.

These are exceptional instances, however. For the average pupil the half-hour is most crowd in as much as possible during sufficient.

SUMMY'S CORNER

THE SUMMY "EDITION"! Whenever you see the familiar gray-green cover of the SUMMY "EDITION," you know you are in contact with music which was composed and published for those who are satisfied only with the best.

You can be sure when you buy music in the SUMMY "EDITION," you are buying music that reflects MODERN IDEALS and conforms to MODERN TEACHING METHODS.

FRANCES TERRY

has some of her outstanding Educational Works for Piano published in the SUMMY "EDITION."

Her Latest Work! FIFTEEN INTERMEDIATE STUDIES

(4th Grade. Price, \$1.00)

These Studies outline the characteristics of the piece and the study. Each Study is planned to exemplify some definite technical problem of piano playing. They are exceedingly well graded as the HELPER STUDIES for which they can be successfully substituted.

(Summy "Edition" No. 132)

Another New Work! SIXTEEN SPRIGHTLY STUDIES

(3rd Grade. Price, \$1.00)

Short Studies that are adapted to develop technical facility and also delicacy of touch. Their musical attractiveness contributes to their value.

(Summy "Edition" No. 129)

A Favorite Teaching Work! FIRST STUDIES IN STYLE

(Adv. 2nd-3rd Grade. Price, \$0.75)

Twelve Little Pieces Without Names. Through the influence of delightful melodies and short forms the technique of this grade may be advanced thoroughly and creatively.

(Summy "Edition" No. 104)

A Standard Teaching Work! LEARNING HOW TO PLAY

(Adv. 1st-2nd Grade. Price, \$0.75)

When that critical time comes that the pupil needs a real piece to play, these six pieces with suggestive titles perform an important part in early education. Adapted also to the older beginner.

(Summy "Edition" No. 95)

MUSICAL EDUCATION IN THE HOME

Conducted by
MARGARET WHEELER ROSS

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Planning the Vacation Period for Profit

WITH THE passing of another month, school will be dismissed and every mother will face a long vacation period with her brood of high-spirited, restless youngsters released from a regular time-filled routine, either to find entertainment and occupation in the home or to become a nuisance in the neighborhood.

The wise mother will begin now to plan this vacation period for profit. There is no better time for music study, from the beginning lessons to the virtuoso class. In nearly every instance where a child rises above mediocrity in pursuit of music there has been careful preparation and wise planning by the parents. True, in a few isolated cases pronounced success has come in the face of neglect and even opposition on the part of the parents. But it is only where unquenchable genius has burned. The average child, if he attains any decided success, needs someone continually at his side, planning his work and spurting him on. Notable achievement seldom attends the child who grows up habitually wasting the vacation period.

For the younger children no better season can be selected for beginning work. The days are long, and because of the heat they must stay indoors a good part of the time. They may be put at musical play—games, rhythmical exercises, hand and finger drill—and thus acquire the fundamentals while they are occupied in a happy, interesting way.

For the older children vacations spent in the summer camps that feature music study as a regular curriculum are ideal. For such an environment gives the spur of competition, the companionship of those in a like occupation and the advantage of ensemble practice which is the best drill in music study.

Good Sportsmanship

IN ALL OF these camps there is the regular routine of healthful exercise carefully supervised and shared with others so as to insure its attractiveness and take away all semblance of duty. This life, lived in terms of regular hours and systematically planned schedules, has the added advantage of a drill in good sportsmanship necessitated by daily contact with the same people in isolated camp life.

Wise parents will not allow their children to "stop music lessons" because it is vacation time. They will rather avoid this tremendous economic waste and increase the number of lessons and the length of the practice periods. They will welcome the release from school duties in order that additional time and strength may be given to the greatest of the cultural arts.

Mrs. C. A. B. Nebraska. I am pleased to note your interest in this department

and have mailed you the list of material requested. See answer to Mrs. S. Cottonwood, California, in this department, in the April, 1928, issue of THE ETUDE, and to Mrs. P. C., this issue.

Mrs. R. M. Cedar Rapids, Iowa. If you will refer to the answer to Mrs. S. Cottonwood, California, in the April, 1928, issue, you will get the information you requested. I have mailed you a list of the material you will need.

Mrs. E. F., Oakland, California. Good titles on general pedagogy are "Principles of Teaching," Thorndyke and "How to Teach," Strayer and Norworthy. Relating especially to the pedagogy of the piano is "Elementary Piano Pedagogy," Macklin. Another good book for your special purpose is "Psychology for the Music Teacher," Walter Swisher. All of these books may be obtained through The Theodore Presser Company Service Department.

Mrs. P. C., Oklahoma. Four years of age is too young for beginning music lessons. The only training you should give such tiny tots is to have them sing with you the songs especially prepared for them and to drill them in rhythmic, such as marching, skipping and hand-clapping to a variety of rhythms. If there is no one teaching the kindergarten method in your town, and, as you state, several other mothers are interested, I should think, with your musical training, you could gather these tiny tots together and let them play at music. I do not know how extensively you can go into the equipment, but you should provide yourself with charts, games and early song books, and teach the fundamentals in this way. Arrange a toy symphony. The children love this and it is fine rhythmic training. Give them hand and finger drill on the top of a table, being especially diligent that you do not strain and stiffen the tender muscles. The two dangerous features that are ever-present in too early piano work is the stiffening of the muscles and an awakening of a distaste for the subject if it is presented in the form of hard, uninteresting discipline.

Correction. This department was guilty of a grave error in the February number. Because our own birthday comes in this "month" we tried to claim as many distinguished names as possible and erroneously included that of Woodrow Wilson. A remonstrance from his native State having reached us, we apologize to Virginia and classify his name with the honored list in December. Since we must part with so famed a name from the February group, we cannot resist the temptation to add the name of Henri Victor-temps, Belgian violinist and composer, Ossip Gabriilowitch, Russian pianist and conductor of the Detroit Symphony Orchestra, Marcella Sembrich, vocalist and teacher, and—almost forgot them—Daniel Boone and Buffalo Bill!

Double Your Hourly Income with "Melody Way"

Teach 10 Pupils at Once

Hundreds of teachers throughout America have increased their incomes by adopting Melody Way. One teacher in Massachusetts has 247 Melody Way pupils; an Iowa teacher reports an enrollment of 100; an Oklahoma teacher has several children's classes and an adult class as well. All these teachers, and many others, have increased their incomes far beyond their expectations. The Miessner Institute will help you do the same thing. We furnish complete instructions for organizing, building up, and teaching Melody Way classes. You will find Melody Way classes fascinating as well as profitable.

Plan Now for this Summer

If you are going to teach this summer, you can make the season more profitable by teaching Melody Way classes. Miessner Institute Helps will enable you to start in a short time. You can still get the necessary training by enrolling now for our correspondence course.

But if you are going away to study this summer, why not plan to study the modern Melody Way methods at the same time? The demand for trained teachers is growing every year. Mr. Miessner will conduct Normal Melody Way courses at the Summer Master School of the Chicago Musical College for a term of six weeks, beginning June 25th. By a small investment of time and money in this course now, you can increase your income throughout your teaching career.

Miessner Institute of Music

A knowledge of Popular Music makes possible a better understanding and appreciation of the Classics

SHEPTE RAPID COURSE

In Modern Piano Playing

A RAPID SYSTEM for those who wish to play

POPULAR MUSIC in the shortest possible time and also for forming an excellent foundation for those who wish to pursue the CLASSICS.
Shefte Rapid Course—Vol. 1—Price \$1.00 in U. S. A.
For beginners with no knowledge of music or who have had little teaching.
Shefte Rapid Course—Vol. 2—Price \$1.00 in U. S. A.
For those with fair knowledge of music.
Shefte Rapid Course—Vol. 3—Price \$1.00 in U. S. A.
For the advanced student and professional pianist.
A legitimate—fundamentally correct Piano Method endorsed by leading American Authorities, a few of which endorsements appear below.

have examined the Shefte books and think they are a very practical addition to piano study material. Every American musician should know this system, and this system, among others, Mr. Shefte has treated in a very thorough and rational manner. I shall use these studies in my teaching.

Charles D. Hayden

Vice, The Society of Music Teachers of Iowa,
Iowa State Musical Association,
715 Mills Street, Des Moines, Iowa

At last a piano teacher can fulfill the demand for teaching popular music and have a clear conscience that they are doing it in a legitimate way. Now that we have the Shefte books, thousands will study music that never would have attempted it before.

William A. Ernst

First School of Music & Musicology, Conservatory,
100 West 11th St., New York City

Sent on Approval to Piano Teachers who Read the "ETUDE"

Knowledge acquired by students through the study of this course makes an excellent foundation for more serious study.

FORSTER MUSIC PUBLISHER, Inc.
218 SOUTH WABASH AVENUE, CHICAGO, ILL.

SCHIRMER'S LIBRARY of MUSICAL CLASSICS

Consisting of more than 1500 volumes, embracing all classifications of music—PIANO, ORGAN, VOICE, VIOLIN, CELLO, ENSEMBLE MUSIC, etc.

Editorially referred to as

"A MONUMENT TO AMERICAN PROGRESS IN MUSICAL ART."

We prize greatly such comment, but to us as publisher it means that and more. Fifty years ago the founder of this business began the building of SCHIRMER'S LIBRARY OF MUSICAL CLASSICS, which today continues to grow as originally named. As it is still preeminent among our major catalogs, so also does it provide.

The Basis for the Musical Education of the Nation

To practically every music school and teacher in the country, it is the foundation of their teaching ideals.

We appreciate the compliment that other prominent publishers pay us, when they bring out in their Editions only those volumes which they find sell in large quantities in SCHIRMER'S LIBRARY OF MUSICAL CLASSICS. As in the past, however, we shall continue to build this Edition not according to its probable saleability, but in a manner that will justify the opinion of a prominent music educator who names it

"The Most Comprehensive Edition Known to the Musical World—an American Institution—Trustee of the Classics and Champion of Musical Progress."

In this monumental collection of classical music, there are more than thirty-five thousand compositions, by three hundred and thirty composers. In the 1500 volumes so far published there are one hundred and thirty-five thousand pages of music.

A. S. GARBETT

Largo from "The New World Symphony"

Mrs. JEANNETTE M. THURBER was responsible for Dvořák's "New World Symphony" to a great extent, according to Henry T. Finck who writes of it in his "Golden Age of Music." Finck says, "Dvořák did not wish to leave Bohemia (where he was teaching to support his family); but the offer of \$15,000 a year from Mrs. Thurber was not to be resisted. He was not happy, however, away from home; that seemed clear to me every time I saw him at his home or with his classes at the Conservatory. One day Mrs. Thurber, in view of his obvious and constant longing for his homeland, suggested that he should write a symphony embodying his feelings and experiences in America. He promised to do so, and in the slow movement he pathetically embodied his homesickness."

Finck further tells us that "The first performance of this master-work was the most memorable event in the long history of the New York Philharmonic Orchestra. When Seidl first looked over the manuscript he was overwhelmed with emotion. He rehearsed the score with eager enthusiasm, and at the final rehearsal an incident occurred which showed how deeply he had penetrated into its spirit.

"Dvořák was present. By some strange momentary aberration, or whatever you choose to call it, he had marked the slow movement 'andante.' Seidl, led by a correct instinct for its intense pathos, played it much slower. When he got through, Dvořák went to the conductor's desk and marked the movement *adagio*."

The Oboe in the Kettle

Is ARTHUR HERVEY's life of Camille Saint-Saëns we learn something of the precocity of this great French composer whose musical career began at the advanced age of two.

"He has related himself," says Hervey, "how at the age of two he liked to listen to various sounds, such as the creaking of doors and the striking of clocks. His great pleasure was what he terms 'the symphony of the kettle, an enormous kettle which was placed every morning in front of the fire.' Seating himself by this, the little fellow waited with a passionate curiosity for its first murmurs, its slow crescendo so full of surprises, and the appearance of a microscopic landay (oboe) the sound of which rose little by little until the water had reached boiling point."

"From the same unimpeachable source

we gather that he was then learning to read, that when only two years and six months old he was placed in front of a small piano, that instead of striking the keyboard in a haphazard manner, as children do at that age, he touched the notes one after another, and only left them when the sound had evaporated."

"Having learned the names of the notes, the individual notes became so fixed in his brain that when the piano was being tuned he was able, to the general astonishment, while playing in the adjoining room, to name correctly each note as it was struck."

"... The astonishing progress made by this veritably surprising child led to his playing the piano part in one of Beethoven's violin sonatas before a select audience in a drawing-room at the age of four years and seven months."

History of a "Best Seller"

"The best known song by Landon Ronald is undoubtedly 'Down in the Forest,' regarding which he tells a curious story in his book of 'Variations on a Personal Theme.'"

"I had written a cycle of songs called 'The Cycle of Life' and felt somehow that the balance was wrong, and that other song was required in the middle of the album. I wrote and told the author, Harold Simpson, my feelings, and he promptly agreed with me, and sent me 'Down in the Forest.'"

"I wrote the music in half an hour, took it to Enoch, and thought so little of it that I didn't even wish to play it to him. He insisted, however, and I did so, making the remark, 'It will never sell a copy, but it is just the bit of make-weight I want for the Cycle.'"

"After hearing it he agreed with me in my sentiment; the only dissentient voice was that of his partner who happened to be present and said, 'You never can tell. It might be a big seller.' He was quite right in his prediction."

Rubinstein, the Leonine

"RUBINSTEIN was master of them all," writes George P. Upton, in "Musical Memories," a book of Chicago reminiscences.

"He comes back to me most vividly in his concerts at Allen's Theatre in 1872 with Wieniawski, and Louise Ormely and Louise Leibhart, two mediocre vocalists. He was the Jupiter Tonans of the keyboard.

"His personal appearance was impressive. He was athletic in build; his head was large and his hair luxuriously abundant and carelessly worn. His features were rugged, reminding one of some of the portraits of Beethoven whom he also resembled in some of his traits of character."

Canadian Folk Song and Handicraft Festival

MAY 24-28

JOIN this 5-day festival of ancient folk-song and handicraft. From *habitant* village and deep-woods lumber camp come Quebec's native singers, dancers, fiddlers and weavers . . . to make merry in May.

Meet twinkling old Philéas Bédard . . . hear him sing about the kind of nightgown his wife shall wear. Listen to the Bytown Troubadours rolling out "Yankee! Yankee! sur la rivière!" the songs of rascals and hunters . . . the old, old *chansons* of Normandy, handed down from singer to singer these three hundred years. Hear the men's choruses . . . how those fellows can sing! . . . 4,000 of these folk-airs have been collected by the Victoria Museum . . . they are a treasure of rhythm and melody.

World-renowned artists will show the musical possibilities in this folk-music in a program in which these are some of the high spots:

"*Robis et Marins*," 13th Century French Comedy Opera by Adam de la Halle. Produced by Wilfred Pelletier, assistant conductor, Metropolitan Opera Company, New York. Featuring Tokayian of the Metropolitan; Rodolphe Plamondon, late of the Paris Opera, Celia Brault, etc.

"*The Order of Good Cheer*," Champlain's 17th Century soldier-singers. Featuring Leon Rothier of the Metropolitan, and J. Campbell McInnes of the American Opera Company.

"*Honeysuckle*," the founding of the Quebec homespun industry by Mme. de Repentigny. By Jeanne Dusseau, late of Chicago Opera Company, and folk-singers.

Hart House Quartet
Charles Marchand and Bytown Troubadours
Juliette Gaudin
The Canadian Singers

The prize-winning compositions based on folk-melodies will be played, and prizes awarded. A Folk Costume Ball will be the climax of this week of unique carnival centered about Chateau Frontenac, Québec's great castle-hotel.

Moderate hotel rates for the 5-day festival. Round trip fare from New York, \$32. Reservations at Canadian Pacific, 344 Madison Avenue, New York; 405 Boylston Street, Boston; Locust at 15th, Philadelphia; or Chateau Frontenac, Québec, Canada.

THE CURTIS INSTITUTE of MUSIC

JOSEF HOFMANN, Director

STUDENTS' ORCHESTRA

ARTUR RODZINSKI, CONDUCTOR

Special Performance at Academy of Music, Philadelphia, Season 1927-28

"A concert of almost professional quality was applauded in the Academy of Music last evening when the Curtis Students' Orchestra under the leadership of Artur Rodzinski gave a program calling for skilled musicianship. Opening with the Overture 'Oberon' of Weber the orchestra swept promptly into the spirit of the composition and achieved brilliant climaxes in ensemble. —Philadelphia Bulletin, Dec. 22, 1927.

"The orchestra played with astonishing perfection of technique and beauty of tone, great dynamic detail, excellent rhythmic feeling and a youthful enthusiasm and intensity seldom found in professional players. Dr. Artur Rodzinski conducted the concert, the result of which showed the careful and systematic training which he had given its members. —Philadelphia Public Ledger, Dec. 22, 1927.

"The orchestra gave the four movements of the 'New World' Symphony in a beautiful and finished manner. The various instruments are well balanced and play without undue emphasis on any part. The harmonious effect and beautiful phrasing was due very largely to the conductor's strength and interpretative skill. —Philadelphia Record, Feb. 23, 1928.

"The orchestral program was one which holds much of difficulty for the embryonic concert artist. Dr. Rodzinski had his players well in hand and they responded with all the verve of seasoned musicians. —Philadelphia Inquirer, Feb. 23, 1928.

Dr. Artur Rodzinski is conductor of the Students' Orchestra and instructor of Orchestra Classes at The Curtis Institute of Music. The instructors of orchestral instruments are solo players of these instruments in the Philadelphia Orchestra.

The Amateur in Music

THE word "amateur" is gradually and properly being translated into "music-lover," in its application to the tone art. This is a fortunate advance, since the word "amateur" was casually taking on an altogether false connotation. An amateur is rightly one who pursues an art for the love of the thing. In popular parlance, an amateur is a kind of "putterer" or "bungler"—one who attacks things in a half-hearted way and has little regard for finished and beautiful performance.

We have known amateurs whose devotion to art far transcended that of many professionals. Moreover, they have had a cultured understanding and artistic insight that would have given them the highest position, had they chosen to follow the art professionally.

One of the most astonishing instances of amateur production is the famous Wiertz museum of Brussels. Antoine Joseph Wiertz was a man of great wealth who chose to paint, not with a view to selling his pictures, but to expressing his ideas.

He was an arch enemy of war and cant. He detested Napoleon as a maker of death and desolation. When he died, he left a wealth of artistic works—enough to constitute a museum, for which he made provisions in his will. Of all the "one man" museums of the world, this is the most extraordinary. Every year it is visited by thousands who are thrilled by his extraordinary ability and bizarre conceptions. Yet Antoine Joseph Wiertz was wholly an amateur. He worked for the love of the art and the joy he found in expressing himself in that art.

In America, during the past twenty-five years, we have been developing an amazing number of musical amateurs of such high technical efficiency and such keen artistic insight and rich cultural advantages that the art of music has been helped more by the ambitions and desires and money contributions of these men and women than through almost any other source. This is particularly true of the men. We know of hundreds of American men of affairs, whose love for music comes right after that for their families and for their regular life work. In innumerable cases this takes the form of gratitude, because these men have found in their musical training and in their regular study of music a means for intellectual development and nerve restoration that they have not hesitated to say has had a great and vital effect upon their whole careers. The mere fact that dozens of men, who have

risen to the very top in their callings, have in their youth had musical training, is in itself significant.

The late Theodore Presser continually called the attention of his friends to the importance of the amateur. He made it clear that it was far better for the art to have a great number of fine amateurs than an over-supply of indifferent professional musicians. The professionals must in a large way depend upon the amateurs, whether the professional composes music, gives concerts, sings in opera, or teaches.

We are often asked whether there should be special courses for amateurs. We think that we are past that. The quality element in American musical endeavor is so high that all who play an instrument aspire to play it in the finest possible manner. Far better to play simple pieces superbly than to play advanced pieces badly. The standards are so lofty in this day that we find school girls by the score who really play better than did many concert artists fifty years ago.

It is true that many are denied early musical training and

it is often desirable in adult years to employ "short cut" methods so that the greatest possible advance can be made in the shortest possible time. The mature mind may grasp in a brief period, through reading and self-study, what often takes the child a much longer time to accomplish. Caroline Norcross in "The Adult Beginner's Book" and John M. Williams in "The Book for Older Beginners" have provided materials of great value. Your editor recollects very well three of his pupils, sisters, who came into means after the age of sixty and aspired to gratify a life-long wish to study the art of piano playing. After about a year and a half they became able to play pieces of about the fourth grade. It is difficult to describe the joy which they exulted in this accomplishment.

The way of the adult amateur in these days is made much easier by means of the wonderful study advantages of the music reproducing machines and the radio. Information and models of performance, which years ago would have cost a fortune, may now be had "for a song." The acquisition of the ability to play is a delight which always far transcends the pleasure of hearing music. It is indescribable. There is a sense of victory, the expression of repressed emotions, exultation, which can come in no other way. More than this, it makes all the music one hears via the modern electrical and mechanical miracles, far more interesting and understandable.

"NAPOLEON IN HADES," THE FANTASTIC CONCEPTION BY WIERTZ, PORTRAYING THE CONQUEROR AND HIS VICTIMS

or Milan. Dapper, lithe, and wearing his well-cut clothes like the typical Italian of affairs (the best dressed man on the continent) represents the new musical Italy, which has stepped out from the confines of the opera house into the areas of Beethoven, Brahms, Rimsky-Korsakoff, and Stravinsky.

On a particularly rough day, when most of the passengers had deserted the grand salon "for reasons whereof the deponent saitheth naught," Casella played me some of his best-known compositions. With a modernistic in their complexion, they have an organic character and do not seem like so many of the futuristic musical contrivances which appear like a chain of hopeless dissonances strung upon an invisible string. There is always a vigor and always the evidence of his consummate musicianship. Casella plays as only pianist composers play—he creates his inspiration with every performance.

"The Most Practical Pedal Marking"

AMONG OTHER things we discussed a new edition of the Beethoven Sonatas, which Casella had edited for the great Italian house of Ricordi. I remarked that I had gone over the edition with the famous pianist, Wilhelm Bachaus, and that we were delighted with the careful detailed work he had bestowed upon them. I commented upon the use of the linear pedal sign (so familiar to all Ervane readers) as contrasted with the old-fashioned sign, terminating with an asterisk.

"I chose that sign," said Casella with enthusiasm, "because it seemed far and away the most practical of all pedal markings I had found." It was with no little pleasure that I told him that he was using the pedal marking introduced by my dear friend, the late Theodore Presser, over forty years ago and used in all Presser editions since that time. I also noted that, while this marking was obviously superior to the antique pedal markings, no other firms of publishers throughout the world had taken it up seriously until the appearance of this most modern edition of Beethoven.

Swiftly and surely, like the flood of destiny, the giant *Proscopio* ploughed through the sparkling sea until we found ourselves flying by Gibraltar and glimpsing the north coast of Africa, exclaiming with the other passengers at the height of the African mountains. 'Tisnight comes, and the salmon peaks of the snow-crowned Sierra Nevada tell us that we are passing the most romantic part of Spain. Those who have never been upon the Mediterranean find it hard to believe that it requires a journey of two days on a swift boat to get from Gibraltar to Naples.

The Steerage Awakes

MUSICAL THINGS, if no other, let us know that we are coming to 'el Napoli. For a week we had seen little or nothing of the steerage passengers going back home, but on the night before our arrival, the steerage turned itself into a kind of Latin song festival—quite different and very much more thrilling than the bacchanalian chorus of American refugees from the bonds of prohibition in the smoking room of the "First Class."

Liquid tenors, incipient Carussos, with their hands on their chests and their gaze focused upon Mars, rich tropical contraltos, bird-voiced sopranos, and even-toned basses bubbled up everywhere from the hatch-ways. They sniffed the air as though trying to catch a breath of orange blossoms, Camellias, roses, and jasmints. An impromptu orchestra composed of guitars, mandolins, accordions, violins, clarinets, and an Indiana saxophone, all fitting beautifully into the scene, appeared like an apparition on the deck, and the dark fumes of garlic, Chianti, and spaghetti.

Little children hugged their oranges and danced in glee about the smelly coils of rope. To-morrow they would be in "Sunny Italy." Ah! Listen! Who ever heard anything more lovely? *Santa Lucia* pouring into the stillness of the night from the souls of a passionate, spirited people who for years have longed to climb the sun-drenched, flower-garlanded heights of Capri and Sorrento!

"It is worth coming across the sea to hear *Santa Lucia* sung like that," you ejaculate.

"Ah," exclaims Maestro Casella over your shoulder, "you will have many opportunities to gratify your desire. When you do not hear *Santa Lucia*, you will hear *O Sole Mio*, unless it is *Funiculi, Funicula* or *Ciribiribi*. And when you do not hear them, you will hear *Jazz*."

Casella was right. The Neapolitans have a wealth of luscious folk songs. They doubtless sing them all at times, but it must be within the secret confines of

The Neapolitan folk songs one hears most frequently are, apart from *Santa Lucia*, of comparatively recent origin. *O Sole Mio* is by a modern composer, the writer of *Funiculi, Funicula* is none other than Luigi Deza, who was born near Naples in 1846, and who, like Sir Michael Costa and Sir Paolo Tosti, spent most of his later artistic life in London, where he was a professor at the Royal Academy of Music. Thousands of American vocal students have sung Deza's songs, such as *At My Morning, Sing On, Come to Me, If Thou Didn't Love Me, Your Voice and Daisy Time*, yet, when one hears his festive *Funiculi, Funicula* in Naples

ALESSANDRO LONGO

Italian pianist and composer, was born at Amante, December 30, 1864. Educated under Beniamino Cesi and Paolo Serrao, at Naples, he has won a high reputation as a concert pianist, has done notable work as an editor of musical classics, and has a large number of published works in many forms.

some musical camorra. For all practical purposes the repertoire consists of the four songs mentioned. They repeat these insinuating tunes over and over again and they never seem to lose their appealing charm.

In an open carriage pulled by a very small but energetic horse, you pass from the dock, over a street paved with lava blocks, to your hotel on the unforgettable water front. The experience is no less the most terrifying thriller in the amusement park. You have doubtless never been so badly bumped in your life.

The "Big Four" of Folk Songs

ONCE IN your room you are surprised to find a group of singers at your window. They do their entire repertoire of four numbers and you are honored and pleased by your reception and show your American appreciation by "mancis," thrown carelessly from your window. This starts you up in business partnership with the serenaders, who are likely to appear every hour thereafter until you patch the leak in your pocketbook. But it is worth it and much more to carry in your memory the peculiar but delightful timbre of the soprano who sings the melodies. You have come to Naples for song and it is proper that you should pay for it.

It seems as indigenous as Vesuvius itself. It is difficult to put into words the sincere and genuine love which the Neapolitan has for his folk songs. Visit one of the Neapolitan vaudeville theaters, Polittima, for instance, and you will encounter a wholly different kind of performance from that which one expects in the music halls of New York, London or Paris. There is a woe of a paucity of adquate scenery, good stage management and light effects. The settings would hardly be tolerated in second-class American movie theaters. The entire cast of performers may be limited to five or six over and over again. They do the conventional stage dances, even attempting something they describe as the "Shuffled Afro-American." These are received with fair-vo!

But—wait! Here comes the real star. He is a handsome fellow, usually dressed in full evening dress. His repertoire is made up wholly of Neapolitan folk songs, some new, some old. If he were to sing audience with him. He is as great as the Torador in Seville. During the audience turns itself into a kind of choral society. It is easy to see why they

have come to the theater. It is their innate love for melody—their affection for beautiful tunes, which, let us say, marks the difference between the operas of the Neapolitan Leoncavallo, and the Münchner, Richard Strauss.

Stale Jazz

AND JAZZ! We had run away from it in America. Here it was with all its virulence all over Italy, unescapable and woefully common. Stale jazz, like stale soups, is hardly inviting. The leader of the orchestra in any sizeable hotel in Italy probably pictures the typical American as one who lives on jazz, just as his brothers live on *Sole Mio* and *Santa Lucia*. He is certain that he sings on arising, during meals, work, and in our sleep, just as he warbles *Ciribiribi*. Therefore, the moment he sights an American who has come to Naples to be cured of fatty degeneration of the posthumb, he commences to dance and play jazz, which is, at the very least, four years old. He seems astonished when the American is bored to extinction. "Alas, these Americans are a people without musical interest of any kind whatsoever!"

However much Europe may deary our musical taste, the distemper of jazz has spread all over Europe. One musician in a Spanish journal called it the "American musical measles." Just as the measles strikes an African tribe with the fatal virulence of small-pox, thus has jazz (always pronounced "jass") annuied Europe. It is almost impossible to get out of it the hearing of jazz at least some time during the day. In fact, in a copy of the excellent Italian musical monthly, "Musica d'Oggi," we read: *Il Conservatorio di Hoch, di Francoforte, ha stabilito una classe di jazz tota la direzione di R. Sekles. That is, "The Dr. Hoch Conservatorium of Frankfurt am Main, (where taught Raffi and Clara Schumann and studied Cyril Scott and Edward MacDowell) has recently established a class in jazz."*

Why is it that Europe adopts our worst and rejects many of the fine things that we have been privileged to do in musical art? It has welcomed Saravali, Abby Whistler, and other American artists. Whistler is even designated in British galleries as a British painter. Benjamin West was made president of the National Gallery. Save for the work of Sousa, MacDowell, Cadman, Lieurance, the imperishable songs of Foster, and the transient successes of popular writers, Americans are very little known in Europe, can music be a whole. Sousa, indeed, is omnipresent and is heard more in Europe than in America. Excepting for the works of these composers and a few compositions, such as the beautiful *Violin Sonata* of David Stamp Smith, which I heard in Rome, I did not hear any American music in Europe but the damnable din of jazz.

Whatever can these good people think of us? We must seem to them a nation of beaters upon tom-toms and dish pans. We cannot be Americans, while the American character is given little, if any, real attention. We therefore have far to go and much to do. But a beginning has been made. Various organizations and societies have formed codes of ethics and qualifications of teachers in the way of knowledge—as yet with little authority and cooperation—but nevertheless with some success. They have at least presented examples for emulation and imitation.

Initial Attempts

NOTABLE HAS been this in the case of the American Academy of Teachers of Singing founded in New York City by its first president five years ago. This society has given out an admirable Code of Ethics, a set of qualifications for teachers, and, finally, a com-

THE ETUDE

Ethics in the Musical Profession

By HERBERT WITHERSPOON

Herbert Witherspoon was born in Buffalo, New York, on July 21, 1873. He received his A. B. in 1895, from Yale, where he studied music and composition. Later he studied with Edward MacDowell, Peter A. Schnecker and many other eminent teachers. Mr. Witherspoon's concert debut was made in New Haven, Connecticut, in 1895. He toured for several seasons with Theodore Thomas' orchestra and the Pittsburgh Orchestra. Since

then he has sung throughout the United States, Canada and England. He joined the Metropolitan Company in 1908, appearing as Gurnemanz in "Parsifal," and remained with the company until 1916. Since leaving the Metropolitan he has devoted his time to teaching and is now the president of the Chicago Musical College. Mr. Witherspoon has contributed considerable time to lectures for the advancement of musical interests in America.

ONE OF THE best signs of the times for the musical profession is that at last there is a really widespread interest in a standard of ethics or professional conduct and in the observance of that code by members of the profession, not only for their own good and for a better understanding and cooperation among the members, but for actual improvement among teachers and students, both morally and musically.

As music is the last of the arts to attain its real value, coherency and importance, so it is the last of the professions to seek and establish among its members rules of conduct and standards of learning and practice.

Medicine long since cleaned house and demanded of its disciples honorable conduct and adherence to definitely established standards of learning and knowledge. The law has done the same, and to-day the quick doctor and the shyster lawyer can be brought before the courts of their own professions and disciplined, yes, even forbidden to continue their practice by having their licenses taken away from them. This does not mean that there are no quick doctors nor shyster lawyers, but it does mean that their numbers are fewer and that their road is not an easy one. Once branded by suspicion they are under observation, and watchful eyes are observing their every act.

It is a means rather than an end, and the same result would have obtained with or without government licenses. But improvement and discipline have not arisen from mere government or political control but from within the two professions themselves. They have realized that standards, attaining the excellence demanded by long and persevering study. Not only do these educational standards forbid a man or woman to practice law or medicine without measuring up to these standards, but irresponsible criticism of each other has been at least largely killed, while the actual moral character of the lawyer, or doctor, is made an all-important part of qualification.

Unfortunately, the profession of music has not yet attained those standards of education which make for a real restraining influence, while the general character is given little, if any, real attention. We therefore have far to go and much to do. But a beginning has been made. Various organizations and societies have formed codes of ethics and qualifications of teachers in the way of knowledge—as yet with little authority and cooperation—but nevertheless with some success. They have at least presented examples for emulation and imitation.

"Napoli e Uno Canzone" is only the first of a long series of lively and instructive musical articles by Mr. James Francis Cooke, which will appear in succeeding issues of "The Etude." This article will be continued in June. In July "The Glory That Was Rome" will be published; and in August will appear "Florence the City of Flowers."

HERBERT WITHERSPOON

prehensive list of beliefs in important forms of knowledge, action, physical law and principles of teaching. Other branches of the profession will, no doubt, follow this example.

That we do not deal with a mechanical subject nor an administration of political, physical and psychological laws as do the other two professions mentioned, is a point to be remembered. The musical art is an agent of human expression. Yet it must be obedient to certain laws (castly defined and formed) of certain physical actions, standards of good taste and coherency, which must be known and obeyed to produce the best results. So it would seem that a real standard of musical education can be founded and firmly established, while a code of ethics, affecting the relations of teachers to each other and to their pupils, as well as to their duty to the world, must be formed as a guide to conduct. Otherwise its agents will never gain recognition in general education. Ethically the musical profession is most at fault through the autocracy of its in-

Rules That Set Free

IT IS nonsense to say that we cannot agree upon real standards in singing and in piano and violin playing. Each profession has its technique, not man-made in one sense but developed by the art through the art. If that is the case, certain natural laws of technique are essentials and must be obeyed for the best results. Schumann said, "the better we understand form, the more free we are." This acceptance of principle does not destroy individuality; it promotes it and saves endless time in gaining a technique, making the student ready to display his individuality and his originality. It is the first requirement for economy.

If these standards can be established, irresponsible criticism will cease or at least be minimized, and this irresponsible criticism is the curse of our profession. How many teachers of singing have the "only method"—looking askance at all other teachers, especially those in the same town? The medical profession could not establish its ethical code until it had established its standard of knowledge and practice. The same with the law, the oldest in ethical procedure of all the professions, even the church.

We shall never get observance of a decent rule of conduct to each other, we shall never establish a real responsibility to our profession, we shall never really develop the students who come to us in the best and quickest way, until we establish standards of learning, technique and esthetic ideals. Then the ethical code will come and be obeyed.

The real genius may make his own laws, but he always begins by knowing the old laws first as few others know them, and he discards them only when they interfere with his best powers. This is true of the genius in all walks of life. How did the reformers work? They had to know a law perfectly in order to break it with any force. So, let us not worry about the loss of individuality.

The Green-eyed Monster

ANOTHER cause for unethical conduct is the green-eyed monster—jealousy. One is jealous of another because the second has more pupils, earns more money, gets more pupils before the public, and so on. Where I was a student in Paris, other teachers said to be a student in Paris, where loyalty should be to the college or school of which the teachers are a part. But even in the schools and colleges, the teachers go their own way, meet but seldom and work solely and entirely for themselves. How silly it all is—worthwhile of a group of children squabbling over a piece of candy. It was a student in Paris, other teachers said to be a student in Paris, where loyalty should be to the college or school of which the teachers are a part. But even in the schools and colleges, the teachers go their own way, meet but seldom and work solely and entirely for themselves. One Hour at the Piano

By FRANCESCO BERGER

Hon. R. A. M.; F. G. S. M.

PART I

A Highly Concentrated Plan of Study by a Famous London Teacher

TO THOSE pianoforte students who can devote three or four hours a day to their work, it is not of supreme consequence if half an hour of their time is wasted. When I say "wasted," I mean that it has not been employed to the greatest advantage, for time cannot have been utterly wasted while fingers are exercised and right notes are played. Something must have been gained, though it may not have been all that was obtainable.

But those others, equally anxious to improve, who cannot give more than, say, an hour a day to their piano, need some guidance as to how to get the utmost return with the least expenditure of time and trouble. They cannot afford to invest in exercises of doubtful utility. For them it is essential that every moment of their limited time shall be filled with *remunerative* work; and they have not the experience which would lead them to a wise selection.

Promiscuous practice they should avoid. They should adopt some definite order that shall economize labor and yet be efficient—some plan for constant improvement. And to them I offer suggestions, formulated on the experience of many years' teaching in hundreds of successful cases. If properly understood and scrupulously followed, they cannot fail to prove of highest benefit. But before proceeding to advise on these technicalities, I must mention some generalities which apply to students in every grade of advancement.

A. The piano should always be in perfect tune; it does not matter about the quality of its tone, but the touch should not be worn out, nor uneven. Each key should require an equal amount of depression, and each finger should be capable of striking with equal strength. The fourth finger of both hands (the one next to the little finger) will require an extra dose of cod-liver oil to overcome its inherent weakness.

B. All scales and arpeggi, in "parallel" movement, are to be extended over the entire key-board, by adult students. Children, whose arms cannot reach so far, may reduce this to two octaves, but not to less. As soon as the construction of scale and arpeggio has been learned, the book should no longer be referred to—the student should rely on his knowledge for right notes. Scales and arpeggi in "contrary" movement should extend to two octaves, and when commenced in the center of the key-board, should do so at the distance of an octave between the hands, not on the same key. The compass of the key-board at both ends should be carefully noted, because it varies in pianos of different make.

C. Everything, whether exercise or piece, must always be practiced slowly at first. Quick practice at a too early date means ruin. When the pace is increased, let it be gradual, not from slow to absolute quick all at once. Always return to the slow pace, if correction is needed in the quicker.

D. In the absence of indication to the contrary by the composer (as we find in Bach and most of the older composers), the normal touch is always "legato," and the coloring should at all times be "forte" when practicing. This is the universal rule, even though ultimately *staccato* and piano may be wanted.

E. *Staccato* touch is for later work; defer it for many a month. When you do apply yourself to its study, remember it can be produced in two distinct ways, known as "wrist staccato" and "finger staccato." The first named is accomplished by raising the whole hand from the wrist, and touching the keys with more or less flattened finger-tips. This is employed only in octaves, sixths or chords.

"Finger staccato" is more difficult. The hand has to be held at a somewhat higher level than ordinarily from the key-board, and from this artificial level the fingers dip down in circular shape to the keys, without the slightest alteration of the hand's position. This is applied to all kinds of passages, and exacts the closest attention.

F. Octaves, whether *legato* or not, should not invariably be fingered by thumb and little finger. The black keys, especially in *legato* passages, need the fourth, not the fifth, finger. Thus, for the right hand:

Thus, for the left:

There are even some cases in which the third finger (the middle one) is to be the thumb's companion. For instance:

Right hand,

and left hand,

G. Do not sit too close to the keys. Allow room for the right hand to reach low down, and for the left to reach high up without touching your wrist.

H. When reaching to keys far above or below the center of the key-board, do not do so at arm's length, for that will always weaken your stroke. Let your arms go with your hands to these extreme places, holding your elbows well away from your ribs. These diagrams, purposely exaggerated, will show what I mean.

I. Beware of the vice of playing chords arpeggio when not so marked by the composer. It is an "effect" to be employed, like every other, on occasion, but not constantly.

O. Do not use either of the pedals in your early work. They are to be reserved as the very last accessory in performance. When a piece has been thoroughly mastered technically, it will be time enough to add the pedalling, and then it will require as much attention as any other division of your task. Haphazard pedalling is a very bad habit. Schumann was very fond of "una corda" but, excepting on very rare occasions, it has a sickly effect. It was his only eccentricity, by a good many.

Both pedals have been not inaptly described as "the refuge of the destitute." Let your playing be more from your fingers than from your feet.

P. Give the larger share of your limited time to finger work and studies; for these, not pieces, will improve your playing. And

when selecting a new piece, endeavor to find a *progressive* one, so as to insure advancement, not mere repetition of what you have already acquired.

Q. Do not limit yourself to too many Sonatas, nor rush to the other extreme of discarding them completely. Alternation in your choice will develop your taste and judgment. Not every modern piece is rubbish, nor is every Sonata equally improving. Although Beethoven is the supreme Sonata composer, there are others whose works deserve study, notably Haydn, Clementi and Weber. Too much of any one composer is apt to cramp your style, and lessen your outlook.

R. Make no effort to memorize. To play without the open book is but a passing craze of the moment. There is no musical value in it; and many of the greatest virtuosos have never indulged in so cheap an exhibition. I do not say you should never play by heart. All I say is: make no effort to do so. When you know a piece very thoroughly, every passage in it, every repetition that occurs, every section of its form, all its fingering, and all its musical meaning and purpose, you will be able to dispense with reading the notes every time you play it. It will happen automatically, as the natural result of complete mastery. The fingers will grope their way largely of their own account, demanding little else than concentration and absorption on your part.

S. To master a work thoroughly you should analyze it as soon as you start upon it. Find out its component parts; its first "subject," its second one, its bridge, its interpolated *bravura* passages, its recapitulation, its coda, in fact its structure, its skeleton. Only after careful analysis will you be able to retain its form, or to render it with the requisite distinction between its important and subordinate sections.

T. Do not attempt pieces that are technically beyond your powers. It is far more artistic and remunerative to play a less difficult piece as perfectly as possible, than to flounder in Chopin and scumble Liszt. If you call (as I have done) upon one of the world's most eminent virtuosos unexpectedly, you will find him at work on what may sound like elementary finger exercises, but he will tell you that they are his indispensable daily practice. Let him be your example. Show-pieces should be the *entree* of your meal; no healthy body can thrive on only such.

U. Your course of study will probably run somewhat on these lines: Plüdy, Fischel, Czerny, Clementi, Cramer, Scarlatti, Chopin, with Bach thrown in early and late, and supplemented by Moscheles and Brahms. Schumann and Liszt are not "studies" at all; theirs are advanced solos. Mendelssohn, though musically excellent, offers but little that is technically new; and Mozart, though supremely musical, is anticipated technically by Haydn. Beethoven is Beethoven, both musically and technically—what that means no words of mine can define.

V. Beware of quacks and their noisily advertised systems. No high road to perfection has as yet been evolved either in playing the piano or in any other occupation.

To assert that A's system is the only one leading to the most desirable results,

when selecting a new piece, endeavor to find a *progressive* one, so as to insure advancement, not mere repetition of what you have already acquired.

Q. Do not limit yourself to too many Sonatas, nor rush to the other extreme of discarding them completely. Alternation in your choice will develop your taste and judgment. Not every modern piece is rubbish, nor is every Sonata equally improving. Although Beethoven is the supreme Sonata composer, there are others whose works deserve study, notably Haydn, Clementi and Weber. Too much of any one composer is apt to cramp your style, and lessen your outlook.

R. Make no effort to memorize. To play without the open book is but a passing craze of the moment. There is no musical value in it; and many of the greatest virtuosos have never indulged in so cheap an exhibition. I do not say you should never play by heart. All I say is: make no effort to do so. When you know a piece very thoroughly, every passage in it, every repetition that occurs, every section of its form, all its fingering, and all its musical meaning and purpose, you will be able to dispense with reading the notes every time you play it. It will happen automatically, as the natural result of complete mastery. The fingers will grope their way largely of their own account, demanding little else than concentration and absorption on your part.

S. To master a work thoroughly you should analyze it as soon as you start upon it. Find out its component parts; its first "subject," its second one, its bridge, its interpolated *bravura* passages, its recapitulation, its coda, in fact its structure, its skeleton. Only after careful analysis will you be able to retain its form, or to render it with the requisite distinction between its important and subordinate sections.

T. Do not attempt pieces that are technically beyond your powers. It is far more artistic and remunerative to play a less difficult piece as perfectly as possible, than to flounder in Chopin and scumble Liszt. If you call (as I have done) upon one of the world's most eminent virtuosos unexpectedly, you will find him at work on what may sound like elementary finger exercises, but he will tell you that they are his indispensable daily practice. Let him be your example. Show-pieces should be the *entree* of your meal; no healthy body can thrive on only such.

U. Your course of study will probably run somewhat on these lines: Plüdy, Fischel, Czerny, Clementi, Cramer, Scarlatti, Chopin, with Bach thrown in early and late, and supplemented by Moscheles and Brahms. Schumann and Liszt are not "studies" at all; theirs are advanced solos. Mendelssohn, though musically excellent, offers but little that is technically new; and Mozart, though supremely musical, is anticipated technically by Haydn. Beethoven is Beethoven, both musically and technically—what that means no words of mine can define.

V. Beware of quacks and their noisily advertised systems. No high road to perfection has as yet been evolved either in playing the piano or in any other occupation.

To assert that A's system is the only one leading to the most desirable results,

A WONDERFUL NEW ETCHING OF JOHANNES BRAHMS

This Masterpiece, by Nani Bauer, is the third in a Notable Series Presented for the first time in America, by The Etude

THESE ARE MR. BERGER'S OWN SKETCHES

or that you can be taught all that is necessary in three or four months, or that instruction by correspondence is an efficient substitute for viva voce teaching, is absolutely false and misleading. Though it is true that "Art is long, Time is fleeting," no student who aims high, and is satisfied with small steps in the right direction need despair. They will, in the long run, carry him farther and on safer ground than longer strides on uncertain footing.

Orchestral Innovations

By H. EDMUND ELVERSON

ROSSINI (1792-1868), the son of an accomplished horn player, liberated this instrument from its former restricted use and employed it freely for bright and appealing melodies. In the Alcebius passages and echo effects of "William Tell," he elevated the horn to a position requiring great technical facility, making the adoption of valves obligatory. He was the first to write for four horns in an overture—thus eliciting the traditional outburst of one of his contemporaries. Along with this, Rossini introduced into his overtures solo passages for the various instruments of a brilliance heretofore unknown. Which makes his final contribution to the orchestral art to be of real consequence, regardless of the unfortunate superficiality and artificiality of much of his operatic creations.

Among his other bequests to music Beethoven (1770-1827) molded the orchestra into its present complete structure and raised it to its present dignity. It was he who first displayed the possibilities of the violoncello, making of it a singing medium of passionate expression. Then for this orchestra he created the great masterpieces in a form which has given permanence to the organism. Such additions as have followed his era have in no essential manner varied its construction as a means of musical expression. It was he who raised the orchestra to its high and supreme estate as an instrument for the interpretation of the deepest emotions of the human heart.

How to Get the Right Number of Notes in Repeated Figures

By E. H. P.

"SPELL, 'banana,'" said the school teacher.

"B, a, n, a, n," answered the little boy. "You have forgotten something; I'll give you one more chance."

"B, a, n, a, n, a, n, a, n, a, n—
"Wait! You can't spell it that way!"
"But I could if you stopped me at the right place."

The young musician often encounters exactly this kind of a difficulty in the rendering of figures consisting of a number of repetitions of similar groupings of notes, such as

To read every note singly and to keep track of them without losing one's place is almost a physical impossibility. The more one tries hard to do so, the more apt the eye is simply to make a blur of the page. There is a remedy for this, how-

ever—though not the one suggested by the school-boy in the "banana" story.

First, be assured that it is necessary to get the right number of notes. That which makes it necessary is that which also makes it easy—and this is nothing more nor less than the tendency for every measure to have the right number of beats and for the beats to follow each other in perfectly even time. If the student gets the wrong number of notes he will notice (if he counts with proper steadiness) that some beat is either hurried or slowed, or in an extreme case, that there is a beat too few or too many in the measure. The remedy is not to "give one's eye to the notes" but to count time steadily (of course playing the right number of notes to a beat) and to make sure that it "comes out even" with the counts of the measure. Thus, in "a" the four notes played on count one are repeated on count two and three and do not need a separate effort of the eye-light. But at count four one must be alert for a change of form in the figure.

In "b" notice that the groups are not alike, except in general shape, but that each alternate one is reversed in direction. There are three eighth-notes to a beat (for such is the best way of counting 1/8 time, except when very slow) and consequently there are four beats in the measure.

If this figure was applied to 9/8 time only, not only would each group of three notes be reversed alternately but also the second measure (supposing the figure to continue on the same level) would be reversed in direction as regards the first measure. In this case, of course, the student would simply count three in each measure and be sure that the right notes were played in each count. To be sure it would be quite easy to analyze either of these cases simply, as a certain number of the repetitions of the figure would fit in with the proper counting of all figures, but the same principle applies to repeated notes. Thus, in playing an example like the following:

one should observe simply that the first beat is four D's, the second beat is four D's, and (which is important) the third group begins with a D. The danger-point is to be looked for at the spot where the repeated figure changes into something different. Any cloudiness of mind as to just where that point occurs is the most frequent cause of error.

Reading Chords Simplified

By SYLVIA WEINSTEIN

TO OBTAIN an ease in reading notes and also overcome the technical difficulties in a page of chord progressions, such as are frequently found in marches and etudes, play the top note of each chord, through one or more phrases, until the melodic outline becomes apparent. Then play these same notes in octaves, the lowest and highest note of each chord.

Next in order are the notes appearing between the octaves. Many of these either remain on the same line or space, or serve as the path of the moon, the paddles, or the water at regular intervals. With its oars cracking in the air locks. You see it shoot forward with a jerk at each pull on the oars, followed by a short

Keeping the Right Tempo

By HILARION F. RUBIO

THOUGHT a pupil knows quite well that the whole note in 4/4 time has four beats, the half note two and the quarter note one, it is often difficult for him to give them the many short pencil strokes are put over the notes as there are beats pertaining to them:

the actual movement of the hand in beating is indicated. In playing very simple accompaniments to voices which give the melody of the music, those who do not possess a keen rhythmic sense should count the number of chords struck by the right hand, the left hand simply striking the bass note:

Practical Memorizing

By RALPH N. B. GRAY

MEMORIZING should begin as soon as the piece is read over for the first time, for when it has been practiced until all the difficulties have been overcome, further study for memorization only becomes monotonous. It is natural, besides, that the piece shall be memorized in the process of mastering it.

Practicing the hands separately and dividing the composition into phrases, usually of four measures, enables one to watch the expression marks and to memorize them at the same time with little difficulty. It is important to concentrate on accuracy at the start in order that faults may not creep in to be eradicated with difficulty later. By learning a composition phrase by phrase it is possible to understand the message of it as a whole.

Beginning to memorize a piece from the first reading of it also enables the student to free himself from the tyranny of reading and re-reading notes and to

avoid the habit of watching the keyboard and the music alternating while practicing. Sight readers say this method also gives assurance in playing.

Concentration is the heart of memorizing. When a student has mastered this, memorizing follows very quickly. So, over, student should practice concentration every day as regularly as he practices his scales and finger exercises. He can practice concentration by listening to sermons, lectures, the radio, and by being attentive to the work he happens to be doing.

Memorizing should be practiced only early in the day, before the brain becomes fatigued, and it is a good idea to practice only thirty minutes at a time. If the student plays over the section memorized frequently during the day, it will probably remain in his mind until the next morning's practice.

The whole piece should be memorized before it is given up even for one day. For this will save much time and extra study.

Making Note Reading Easy

By W. L. CLARK

1. DRILL for rapidity by having the pupil read simple passages as quickly as possible.

2. Before a new piece is taken up, give the pupil a few minutes in which to scan it, reading the notes over to himself.

3. Give frequent opportunities for him to read over compositions which he has never seen before.

4. Encourage him to memorize easy sections, for in this way he not only goes

over the material more often than he otherwise would but also begins to relate the tones with the notes themselves. Have the pupil get a few pieces noted perfectly. This stresses the importance of accuracy.

6. After the pupil can read the treble notes accurately, stress the bass and see that it is mastered just as thoroughly.

7. As the pupil advances, try transposition occasionally.

Row Boat Playing

By A. E. CAMPBELL

PICTURE a wonderful summer evening by a beautiful lake where the dark shadows are cast from the trees on the water's glassy surface. Silently a canoe glides across the path of the moon, the paddles, with their water at regular intervals, with its oars cracking in the air locks. You see it shoot forward with a jerk at each pull on the oars, followed by a short

period of smooth sailing which is again broken by the next pull.

When your pupil has a dream, melody which he plays unevenly, his playing to the row boat. Show him how his unevenness is spoiling the beautiful picture that his piece should represent. Stimulate his imagination by recalling the movement of the canoe.

A Self Help Lesson in Modern Pedaling

By PAULINE MALET PROVOST ORNSTEIN

GOOD PEDALING can be achieved only by the student who has learned to listen objectively to his own playing. No pedal markings will teach what can be learned during a few hours of the perpetration of the piano. If the pupil will but direct a sensitized ear towards the effect his pedaling produces, he will learn more than is contained in any treatise upon the use of the pedal. The core of what the hand and the pedal foot is the source of many subtleties.

If the first use of the pedal be guided by self-critical listening, an interrelation will be established between the ear, hand and foot, which will soon become subconscious and habitual. The teacher's province should be to help the pupil to hear and correct his own errors in pedaling rather than to note for him the proper points at which to lift or depress the foot. To prescribe and mark exact pedalings at first glance the easiest method of teaching, but it will not be constructive and will never develop that subtle adaptability which enables an artist to make the most of every instrument and situation. The reason is no reason why the student should not be shown at the outset how to time his use of the pedal to meet varying conditions. If his pedaling be guided by his own ear, he will inevitably do this, for his foot will act quite intuitively to protect his ears from the discomfort of discords that would be coincident with muddy pedaling.

With help the student will discover and be able to test through experience the exact points at which changes of the pedal are required. Even very simple exercises will do this, for they will guide him in this way to discriminate by ear between moments which demand the pedal and those at which sustained sound is unnecessary. As soon as their little feet can reach the pedal they should be encouraged to use it as a third hand to hold those notes not easily held with their tiny fingers.

Although many usages of the pedal may be explained, instinctive habits of good pedaling are most easily formed at an early age, and it is a mistake to withhold which the pedal alone can offer. If the pedal has been made proper use of from the beginning of study and carefully applied to simple things, it will rarely be necessary in advanced study to make corrections. Most students are simply unconscious of the confusion of sounds which they produce by bad pedaling. This is so only because they have not learned to listen to themselves. They must first be aroused to do this, and better pedaling will follow as a matter of course.

Prescribed pedalings should be left for the virtuous teaching advanced students. Here special effects will be desired and in all probability the pupil will be unequal to discovering the means for producing these. But preparatory work deals rather with the formation of habits than with special performance. An exhaustive acquaintance with the ordinary uses of the pedal is requisite before exceptional pedaling can be considered. The damper pedal is perhaps most frequently used as an aid to legato playing, and its employment for this purpose must be mastered first. Another of its elementary purposes is to insure rhythmic pulses. When these two uses are clearly understood and can be easily ap-

plied, the pupil is ready to proceed to more special pedalings.

The Mellowing Pedal

THE DAMPER pedal which has the greatest range of effects naturally attracts our attention first. Often misnamed the "loud" pedal, it is not used characteristically to effect loudness at all. It is mainly used for the purpose of connecting or affiliating notes which would be difficult or impossible to combine with the hand alone. To think of this pedal as loud suggests a totally false value. Its essential province is to sustain sound and in this province it is invaluable in producing legato and in mellowing and mellowing the separate elements of an accompanying chord.

A simple illustration will give a key to the use of the damper pedal in legato. Play the scale of C using the second finger on each note in turn. The notes will be by the nature of the fingering sound disconnected. But now, before beginning the scale, press the foot down on the damper pedal. Lift it only during the moments that the finger is holding down each key in turn. If this be carefully done the notes will sound perfectly connected. The foot should move down on the pedal just before

the hand is raised from each note. In this way the pedal will hold the note which the hand releases. When the finger plays a new note, the foot must be raised at exactly the moment that the new note begins to sound. If it be raised too soon there will be an instant of silence and the continuity of the legato will be broken. If it be raised too late the old and new notes will sound together and discord will result.

Now it happens that, when the pedal is used in this way, the foot and hand incline to act in opposite directions; that is, when the hand descends on a note, the foot rises and, when the foot ascends, the hand goes down. The contrary motions are at first confusing. There seems to be a definite muscular compulsion to raise the foot too soon and to put it down simultaneously with the finger. But this is the very thing which must be guarded against. The foot and finger must always supplement and never duplicate each other. If we wish to lift the finger, the pedal must go down to catch and hold the note before the finger leaves the key. Our only chance to lift the pedal without fear of breaking the continuity of sound is during that period when the finger is holding the note down. Indeed as each new note is played the

pedal must be lifted or the old and new notes will sound together and discord will result. If lifted at exactly the right moment, the pedal will connect and clarify perfectly, as in the following:

To help the pupils coordinate these opposite muscular activities, let him visualize a board extended across and above his foot and imagine the foot as playing up against the board at the same moment that the finger is playing down on the key. This mental picture sometimes makes the contrary motions seem less contrary and more identical.

In the above exercise, once the new note has sounded and the pedal has been cleared, the damper may be pressed down again as soon as seems convenient. Far greater exactness is required here in the timing of the up pedal than the down. In fact it will facilitate legato playing if the student will think of the pedal as normally down, only to be lifted momentarily when a change of chords or notes invites or demands clarification.

Before approaching any complex problem of pedaling, it will be wise to practice the simple exercise, changing the results by ear until a perfect legato, free from discord, is obtained.

A more difficult example of the legato pedal is to be found in the playing of large broken chords for the left hand when these appear in slow tempo. Suppose that all the notes of such a chord cannot be reached by the hand at the same time. It is the province of the damper pedal to hold the lowest bass note while the hand leaves it to play the upper notes of the chord. Here a much more skillful pedal is required. It is possible to dwell upon the lowest note for only the fraction of a second; yet within this time the pedal must be lifted and depressed again before the note is released. The foot may remain up but a moment, yet in that moment complete clarification of the new harmony must take place. For example:

must be played as if it were written thus:

and the pedal used as indicated. Only in this way will the full sonority of the chord be sustained. Note that the right hand is played immediately after the bass note, and the upper note in the left hand is

PAULINE MALET PROVOST ORNSTEIN

allowed to follow. Only when played thus can the pedal function properly in slow tempo. If the hands are combined in the more usual way:

Ex. 4

either the legato quality of the melody will be sacrificed or the bass note will be lost, thus destroying the clarity of the harmonic progression. The chord obviously cannot be rolled at great speed because of the quiet mood, and this would be the only other means of achieving continuity.

Correct use of the pedal often makes possible a simplified fingering. Consecutive fifth fingers or thumbs can be used in playing a melody and yet a perfect legato will be maintained by the pedal. For instance:

Ex. 5 Schumann, Romance

will sound perfectly legato if pedaled as indicated. Awkward positions will be avoided and the choice of strong fingers will make it far more effective than if the notes had been connected by means of the hand.

It is well to study the pedal first in some piece which is technically not difficult. Children may use it from their earliest lessons on easy pieces. For older beginners and students, the *E minor Prelude* of Chopin presents an excellent opportunity for studying the pedal in legato. The left-hand chords here change continually, and, because of the repeated notes, will certainly sound disconnected unless the pedal is used with care. Every time one of the notes in these chords changes, the pedal should be lifted and pressed down afresh. For example:

Ex. 6 Chopin, Prelude E Minor

Sometimes an effect of freedom and breath can be obtained by lifting the pedal with each note or a portion of a melody. The impression will be of legato, but of a legato different from one produced by the hand. For example:

Ex. 7 Liszt, Liebestraum

There are times when the damper pedal is not for legato but for the purpose of accentuating a rhythmic pulse. Its management for this purpose is the exact opposite of its legato use. Since its objective is now merely to intensify and redouble the accent made by the hands, it will coincide in direction with the downward motions of the hands, and it will in general remain down only for short periods. A good example of this is the following:

Ex. 8 Bach-Saint Sæns, Gavotte

Here, due to the more rapid tempo, the top note of the right hand is played with the upper note of the left-hand chord. At this tempo the left-hand notes are so nearly simultaneous that the pedal can catch the entire chord clearly. Later in the same composition appears an octave passage which should be pedaled thus:

Ex. 9 Bach-Saint Sæns, Gavotte

Note that the pedal here remains down on four consecutive notes; the tempo, however, is so rapid that this is not objectionable, and the following four notes are without pedal so that there is time for everything to clarify before the pedal again goes down. Here the pedal's only value is that it adds to the accent and prevents the passage from sounding dry.

The tempo at which a passage is to be played largely determines its pedaling. By no means is it always necessary to change the pedal on each note. It is necessary, however, to clear the pedal entirely at every point of definite harmonic stress. Passing notes and even passing harmonies may under certain circumstances be carried on one pedal. This usually appears in rapid tempo where the confusion will last no longer than an instant. For example:

Ex. 10

Ex. 11 N. D. 80

Here, if the metronome mark is set at 80 to the half note, it may be pedaled as indicated above. If, however, the metronome be set at 80 to the quarter note, it would be pedaled as follows because of the slow tempo:

Ex. 12 Grieg, Holberg Suite

The matter of tempo also enters into such cases as the following:

Ex. 13 Liszt, Liebestraum

Here, even though the chord does not change on the second and fourth quarters, such a volume of tone will have been accumulated, due to the number of notes and their rapidity, that it is wisest to lift the pedal and to allow the reverberations within the sounding board of the instrument to subside as we approach the new harmony. If this be not done, echoes of old chords will be caught on the new pedal, and these will muddy the chord progression.

Occasionally the damper pedal may be vibrated rapidly up and down to thin out an accumulation of tone without actually losing it, as in the following:

Ex. 14 Liszt, Liebestraum

Care must be taken then not to lift the pedal entirely. This half pedal, with or without the vibrato, is useful in holding

hass notes while releasing weaker upper notes. The vibrato pedal is effective also in *marcato* trills where a gradual *diminuendo* is desired. The half pedal is used often, particularly in modern music. Sometimes, as in the following (as well as Ex. 7):

Ex. 15

a lovely and unusual effect is obtained by clearing the pedal a moment late. This can be done only under rare conditions, but there are times when the late lift thus produced is most effective, since it lasts but an instant, and the clear harmony emerges as from a tonal mist.

There are almost endless effects that the student will enjoy discovering for himself. Individual research with the foregoing principles in mind should yield a rich reward.

The soft pedal is best used for its sordest effect rather than actually to diminish the amount of tone. A beautiful *pianissimo* can be made wholly without aid, but this pedal does lend a quality and peculiar color which constitutes its most important function.

The middle pedal is rarely employed, as most of its effects can be obtained through skillful management of the damper pedal. It may, however, prove convenient in some very special cases, as is the following, where the bass notes should be held and the upper notes should sound detached.

Ex. 16 Bach-Saint Sæns, Gavotte

sustaining pedal

A sensitive ear and developed taste remain the only guides. Acoustics of instruments vary, as do those of halls. All possible shades of difference can be sensed but cannot be taught. No one can give a rule for the contemporary factors that affect all playing. But if these conditions be not properly appraised and allowance made for them, much of the beauty of an otherwise good performance will be forfeited. Hence the importance of training the ear to a highly self-critical attitude cannot be overestimated.

SELF-HELP QUESTIONS ON MRS. ORNSTEIN'S ARTICLE

1. What are the two most common uses for the damper pedal?
2. How may the opposite movements of hand and foot be coordinated?
3. Formulate two general rules for raising the pedal.
4. What is the result of rapidly vibrating the damper pedal?
5. In what cases is the middle pedal to be used?

It would almost seem that the more minute a sign is the more varied and numerous are the services it renders to musical notation. The dot is an instance; it forms, or is an integral part of, at least seventeen musical signs, falling naturally into five groups representing as many separate functions:

1. Time and rhythm: The dot was a constituent element in no fewer than ten of the fifteen characters which formed the *neumes*—that system of lines, angles and curves which from the eighth century (some say fourth) to the twelfth gave approximate idea of the accent and melody of ecclesiastical chants. The germ of the modern staff appeared about 900 A. D., and four hundred years later the dot reappeared. This time it was used as a separate sign with four meanings. Three of these could be made clear by a lengthy excursion into medieval time-systems long obsolete. But one of them, the *Punctus Impunctuatus*, survives to the present day with its original function—that of prolonging a note one-half.

For four hundred and fifty years or thereabouts the dot remained isolated and single. But by this time rhythms had become much more complicated, and a dotted note was frequently given seven-quarters of its undotted value. To remove the uncertainty which this occasioned, Leopold Mozart added a second dot, half the value of the first, and his still more famous son, Wolfgang Amadeus, a pioneer in rhythmic intricacies, added a third. Each dot is half the value of its predecessor, and though three is the usual limit, and even that number not often reached, it is interesting to note that no number of dots would ever double the value of the notes, each dot giving exactly half the time length necessary for that purpose.

Position of Dot
IN THE WRITING of dots a question arises as to their position, both on the horizontal and perpendicular planes. Shall they be placed immediately after the note it prolongs, or where a note-head would be written if a tie were substituted for the dot, that is, in the part of the measure proper to the beat it represents? Also, shall a dot be placed in the same space as the note it prolongs (or next to it if the note be on a line), or in the space nearest the note which follows it in the same voice-part?

It will be seen from the following example from his study *The Lake*, Ex. 1

Ex. 1

As an identical sign with a very similar interpretation was once used in printed music to indicate an ornament called the *bebung*, but it became obsolete when the pianoforte superseded the clavierchord on which alone it was possible of execution.

3. A dot under a semi-circle has been used since the early sixteenth century to indicate a pause on a note or rest. Over a double-bar it has the same meaning as the word *Fine*, indicating that the movement ends there after a return from a further section to the beginning.

To Indicate Varieties of Touch
4. **S** TACCATO. It does not appear to be known who first placed a dot over or under a note to indicate it detached from the next note. So, before assuming that this was done by any particular early writer, we must be sure that the copy in which the dots are to be found is an original edition, and that the mark was not added by an editor. As a definite diminution of length to about one-half the written value is now assigned to the dot, the question arises why it should

be used at all—why not write a note of the exact length desired? The answer is that this plan would require two characters, a note and a rest in place of the present one dotted note; or three characters, a note and two rests, in place of a *staccatissimo* note with its dash!

5. **S** YMBOLIC. The invention of this sign, is attributed by some writers to W. A. Mozart (1756-91), and by others to composers of the early half of the century in which he was born; but these latter do not quote instances. Where a single note is to be played with this touch a short, straight stroke is placed over the dot instead of a curved line, thus: - . This is because a curve would make the sign identical with that used for a pause: - . But confusion has overtaken this sign even in this qualified form, for it has since been invested with a very different, indeed opposite, meaning, which will be considered presently (see 7).

6. **M** EZZO-STACCATO with Accent. It may be objected that, as a dot over or under a note alters its duration (just as does a dot after it, though in the opposite direction) the uses of the little sign which we are now considering should have been included under the heading of "Time and Rhythm." But a close examination of the music of classical writers shows that in at least many instances, if not all, an incisive touch, as well as the shortening of the notes, is intended. The evolution of notation is always in the direction of greater refinement, distinction, and detail; and some recent composers have added a straight line above dots to indicate *mezzo-staccato* with accent.

Ex. 2

(The quotation from W. S. Bennett affords an apparent but not real exception to this rule, the lower part being synopetized).

2. The dot is used in manuscript music to represent the division of a note into as many equal shorter notes as there are dots. The idea is to save time and space, but the device is not very effective for either purpose.

Ex. 3

An identical sign with a very similar interpretation was once used in printed music to indicate an ornament called the *bebung*, but it became obsolete when the pianoforte superseded the clavierchord on which alone it was possible of execution.

3. A dot under a semi-circle has been used since the early sixteenth century to indicate a pause on a note or rest. Over a double-bar it has the same meaning as the word *Fine*, indicating that the movement ends there after a return from a further section to the beginning.

To Indicate Varieties of Touch
4. **S** TACCATO. It does not appear to be known who first placed a dot over or under a note to indicate it detached from the next note. So, before assuming that this was done by any particular early writer, we must be sure that the copy in which the dots are to be found is an original edition, and that the mark was not added by an editor. As a definite diminution of length to about one-half the written value is now assigned to the dot, the question arises why it should

be used at all—why not write a note of the exact length desired? The answer is that this plan would require two characters, a note and a rest in place of the present one dotted note; or three characters, a note and two rests, in place of a *staccatissimo* note with its dash!

5. **S** YMBOLIC. The invention of this sign, is attributed by some writers to W. A. Mozart (1756-91), and by others to composers of the early half of the century in which he was born; but these latter do not quote instances. 4. **S** TACCATO. It does not appear to be known who first placed a dot over or under a note to indicate it detached from the next note. So, before assuming that this was done by any particular early writer, we must be sure that the copy in which the dots are to be found is an original edition, and that the mark was not added by an editor. As a definite diminution of length to about one-half the written value is now assigned to the dot, the question arises why it should

Dots are likewise used in music as signs of continuance in the following ways:

10. **C** ONTINUANCE of a syllable over two or more notes. Strictly, they should be used only when the syllable is a complete word or the last syllable of one, lyrics being used in other cases:

Ex. 7

11. In one case dots are used for the same purpose in the making of a slur: This is when two or more verses of a hymn or song are written under one version of music. The slur applies to one or more verses, but not to all.

Ex. 8

12. **D**URATION of an increase or decrease in tone. Cresc..... Dim.....

13. **D**URATION of a change in pitch: 8va.

As a Sign of Repetition

14. **R**EPETITION of a section

In modern music the dots are often placed in only two spaces, the second and third. The writer is strongly of opinion that both plans should be adopted, but on a discriminating basis, so as to avoid confusion with prolongation-dots. If the last bar of the section ends with a four-note chord, two dots should be used; if with a two-note chord, four dots should be used; if with a three-note chord, four dots will best avoid confusion, since one cannot dot more notes than there are in the chord, but one frequently dots fewer. In most cases the function of the dots is quite clear—at least it can always be worked out—but there are cases in which the above rule would render accuracy much easier in reading music than sight, especially if it is closely printed.

15. **R**EPETITION from some note other than the first:

Ex. 9

The direction to repeat from this sign, *Da Capo*, or simply *D. C.*, is quite frequently misused, being used where there is no *Da Capo*, or *D. C.*, repeat from the beginning, is meant.

16. **R**EPETITION of a group of notes:

Ex. 10

This abbreviation is very largely employed in stringed band music.

17. **R**EPETITION of a word or words:

Ex. 11

Sometimes this sign is employed over the usual notation, especially in hymn-tunes, to show the point at which the repetition of words begins.

Thus there are seventeen distinct signs in music of which the dot forms the whole or a part!

SELF-HELP QUESTIONS ON MR. HARRIS'S ARTICLE

1. When should the prolongation dot be placed below its note?
2. Why should not an accented beat be represented by a dot?
3. Why is the use of the staccato dot on economy?
4. In what capacity does the dot affect accents or gravity of sound?
5. How may repetition dots be placed to avoid confusion with prolongation dots?

Memorizing by Strategy

By E. R. C. KYLE

Poor eyesight and good memories often go together, but this does not seem to apply to poor eyesight that has been properly spectacles. Then memory relies once more on vision, and when this is withdrawn, inaccuracies result. By dispensing with glasses, however, a valuable drill may be carried through.

Any piece the student wishes to memorize should be practiced until it can be played well. Then the glasses should be taken off. With the notes looking blurred the student can follow the lines up and down but cannot see distinctly which notes they are.

Then, before beginning to play, he is obliged to fix in his mind the order in which the piece is written and on what notes it begins. Then, knowing where to start, it is easy to follow the blurred line up and down. Presently the glasses are removed and the student is required to measure of grace-notes. The glasses will need to be used to find out just what notes these are—notes which the student has probably been playing for a week but has never really seen before. He fixes that measure in his mind because it is too much trouble to be continually putting the glasses on and off. Then all goes well until he comes to the inevitable difficult part, when he must put on the glasses again and see how that peculiar passage really is played.

A few times like this, on different days, and all the parts of a piece of music are so imbedded in the student's mind that he cannot forget them even if he tries. He knows the signature, the key notes, the runs and difficult places and how the easy rhythm is played. He can analyze that score, telling where the second and third parts with their changes of signature occur, whether he is driving a car or planting bulbs; for, after all, memorizing is really a matter of concentration.

A Young Master's Instruction Books

By ANNETTE M. LINGELBAUGH

A STRENGTH list of books for the young teacher just starting out are Billroth's *First Lessons*, Streablock's *Twelve Melodious Studies*, Opus 63 and 64, Jessie Gaynor's *Miniature Duets*, Burgmüller's *Opus 100*, the first Heller book and Selmann's *Album for the Young*. Also in this list may be included Jessie Gaynor's first book of *Miniature Melodies*, taught entirely from memory.

These books are in the range of the teaching ability of any instructor. They will appeal to the child's sense of melody, are delightful recital pieces and will win the liking of the parents—all essential points in the building up of the young teacher's reputation.

Symphonic Music

"THE BAYREUTH Festival Album," *"Parsifal," Transformation Scene, Great Scene and Flower Maidens' Scene* conducted by Karl Muck; *"Parsifal," Introduction to Act 3, Good Friday Spell* with Kipnis and Wolf as soloists, conducted by Siegfried Wagner; *"Siegfried," Forest Murmur, Introduction to Act 3, Fire Music*, conducted by Hans von Hoesslin; *"Rheingold," Entry of Gods into Valhalla with Rhinemaidens, "Walkure," The Ride with Valkyries*, conducted by von Hoesslin (Columbia).

It is a great achievement to have recorded this series of discs in Wagner's own playhouse, during the course of the Festival this past summer. The fame of this playhouse at Bayreuth is world-wide. It was built in 1872, through the generous influence of his friend, the King of Bavaria. With its actuality Wagner realized one of the crowning dreams of his lifetime—a *Festspielhaus* devoted solely to the production of his own works, those poignant music dramas that were to make his name so famous.

Here, the ideal presentation of that musical cycle known as the "Nibelungen Ring" is given as the composer himself wished it. Here, that mystical and fervent *Parsifal*, the ultimate pinnacle of his creative genius, is unforgotten by the Symphony conducted by Leopold Stokowski (Victor). This suite is captivating music definitely belonging to the theater. Composed originally for the Russian Ballet, it has since been revised into a symphonic suite. Stokowski excels in this type of music, which is written in the modern idiom. It is somewhat melodically de-

FACSIMILE OF THE BEGINNING OF THE ORIGINAL SCORE OF BEETHOVEN'S "MISSA SOLEMNIS"

Master Discs

A DEPARTMENT OF REPRODUCED MUSIC

By PETER HUGH REED

THE ETUDE herewith institutes a Department dealing with Master Discs and written by a specialist. All Master Discs of educational importance will be considered regardless of makers. Correspondence relating to this column should be addressed THE ETUDE, "Department of Reproduced Music."

portrayal of scenic pictures that seem to rise from out an ideal world of dreams setting before you a noble art's most skilled illusion. . . . The realization of this as an artistic purpose impresses one with the extraordinary genius of Wagner. It was he, in fact, who designed this playhouse. A Wagner Festival in this *Festspielhaus* attracts musical pilgrims from all parts of the world; for it is indeed a momentous occasion.

Karl Muck, the conductor of the first five discs, will be remembered by the people of this country for his unrivaled leadership for eight seasons with the Boston Symphony Orchestra. Under his guidance it reached an acme of perfection unequalled by any orchestra of that day. His interpretation of "Parsifal" has been termed by numerous critics the "ultimate" and "unimpeachable" reading of this score. It would not be amiss to say that those three five discs are worth the price of the whole album. Therefore to criticize any of the others would be distinctly paradoxical. However, I must mention that in several cases the sudden and detached cadences require a number of auditions to accustom one to them.

The Fire Bird

"THE FIRE BIRD Suite" (Stravinsky), played by (Sinfonietta), played by (Sinfonietta) Symphony conducted by Leopold Stokowski (Victor). This suite is captivating music definitely belonging to the theater. Composed originally for the Russian Ballet, it has since been revised into a symphonic suite. Stokowski excels in this type of music, which is written in the modern idiom. It is somewhat melodically de-

tached, prismatic in its harmony and feverish in its rhythmic dynamics.

Music such as this is so essentially related to the theater that a short analysis will undoubtedly prove helpful. As a ballet, the stage picture discloses an enchanted garden, mysteriously lighted. After the mutterings in the strings at the opening, the Fire Bird enters. Needless to say, she is a glorious creature of flaming feathers. A young Prince hidden in the garden captures her, but she obtains her release by giving him one of her magic feathers. A group of maidens with a lovely Princess enter and dance, playing a game with golden apples. At dawn they disappear. The Prince is searching for his numbers. If the symphony or orchestra is to attain its highest possible artistic stature it can be only by accepting the finest symphony orchestra as its pattern and model.

The foundation principles of good band performance must be purity of tone, intonation, flexibility of tone, correct dynamic compass, tonal balance, correct phrasing, musical expression and artistic interpretation.

While jazz is neither taught nor tolerated in public school music teaching, yet it has had a baneful effect upon many student players in that many of them have been led to emulate the persistent vibrato as employed by many jazz players. While this is permissible in jazz orchestras, it should never be tolerated in a concert band. Beautiful tone is the first requirement—without it, the most facile technique can be of but small value.

Piano Recordings

MOLLY on the Shore (Grainger) conducted by Percy Grainger (Columbia). Grainger's piano discs are rare gems. This artist is not only a worthy interpreter but also a fine composer. His *Concerto in A minor*, for piano and orchestra (Grieg), played by Arthur de Grieg and the Royal Albert Hall Orchestra (Victor). The Grieg concerto is a truly heroic composition, one of the few large works from this "miniature Viking."

It is interesting to know that this pianist was a close friend of the composer. He gives his performance an authoritative imprimatur. This concerto has an instant and arresting appeal, with its impelling opening and that first agitated, dance-like melody. De Grieg interprets the music with movement and dexterity, changing from the mood of this first theme to the romantic beauty of the second with artistic skill.

The second movement, like the haunting and plaintive beauty of the Noce, which is heard in so much of Grieg's music. In the last movement De Grieg brilliantly interprets the changing rhythms and

(Continued on Page 405)

A FINE concert pianist was heard to remark after a recent band concert that he "had not known it was possible for a band to play so softly, so beautifully and artistically," and that he "had thought such highly artistic results were possible only with the symphony orchestra."

As a matter of fact, the concert band, to remark after a recent band concert that he "had not known it was possible for a band to play so softly, so beautifully and artistically," and that he "had thought such highly artistic results were possible only with the symphony orchestra."

It is true that the band is expected to play lighter and more diversified programs than the orchestra, yet this fact does not mean that the band should not exercise the same carefulness in the presentation of its numbers. If the symphony or orchestra is to attain its highest possible artistic stature it can be only by accepting the finest symphony orchestra as its pattern and model.

The foundation principles of good band performance must be purity of tone, intonation, flexibility of tone, correct dynamic compass, tonal balance, correct phrasing, musical expression and artistic interpretation.

While jazz is neither taught nor tolerated in public school music teaching, yet it has had a baneful effect upon many student players in that many of them have been led to emulate the persistent vibrato as employed by many jazz players. While this is permissible in jazz orchestras, it should never be tolerated in a concert band. Beautiful tone is the first requirement—without it, the most facile technique can be of but small value.

The players should be trained, both individually and in ensemble, in great flexibility of tone. They should be able to make a diminuendo from *forte* to *pianissimo* without a change in quality of tone and without *flattening*. They should likewise be able to make a crescendo from *pianissimo* to *fortissimo* without *sharping*. The careful practice of correct musical exercises in ensemble will more quickly develop good tone, intonation, sustaining power, dynamic flexibility, than any other phase of rehearsal methods.

Dynamic Range

THE MAJORITY of our bands develop a dynamic range from *mf* or *mp* to *triple forte* (*fff*), whereas it should be from *pianissimo* to *fortissimo*. The band that wishes to be distinctly "different and better" should strive to develop the ability to play a real *pianissimo* in tune with good sustained quality of tone. Only the good bands can do this, while the very poorest bands have no difficulty in playing loudly. A weakness displayed by ninety per cent of the bands in our contests is an inability to play the dynamic passages as they are marked. They lack dynamic contrast—their performances are too colorless.

Some bands are lacking in regard to tonal balance. They are unable to attain that fine adjustment whereby each part of the ensemble is given its requisite prominence, no more and no less. Too often, each part is playing at the same volume, so some voice is permitted to become predom-

Ideals in Band Performance

Preparing for Contests and Concerts

inant, though it is a purely harmonic part and should be subordinated to the melodic voice. There are often too many "soloists" who feel more vain ambition than musical feeling and judgment. The band conductor should instill a feeling of team work and an understanding that each player is but an essential part of the complete ensemble and that *over-playing* on the part of a single player can mar the entire organization. Melodic parts should predominate; accompanying parts should be subordinated. The ensemble must maintain a distinction between *foreground* and *background*, if the resultant musical portrayal is to be true to nature.

In many organizations musical expression is largely the "unknown quantity." They have not been taught how to give proper weight and length to notes. They ignore the fact that the emphasis to be given a note is dependent largely upon its relative length and pitch and not wholly upon its position in the measure. They do not know that certain notes in a phrase may need to be shortened, while those of a different character in the same phrase may require that they be well sustained. A knowledge of musical expression is also entirely essential to high class performance and a lack of it is always evident in any colorless, monotonous performance.

Before a band can hope to perform music in an intelligent manner it must be taught the underlying principles of musical phrasing. Phrasing gives definiteness of form and beauty of outline. Until one learns to discern the *crescendos*, *diminuendos*, *accelerandos*, *ritardandos*, and other musical passages concealed in most phrases, he cannot hope to give a true interpretation. They are equivalent to the proper inflection of the voice in reading—the observance of the marks of punctuation.

Correct Breathing and Bowing

IN ENSEMBLE performance the most rudimentary principle of phrasing is that of correct breathing and bowing—merely the separation of phrases. Yet even this is often neglected—players often breaking up phrases for the purpose of taking breath. Such a habit betokens an absolute ignorance of music and is as senseless as a reader taking breath between the syllables of a compound word.

Richard Wagner wrote that "the whole duty of a conductor is comprised in his ability always to indicate the right tempo." He also wrote that "the right comprehension of the melody in all its aspects is the sole guide to the right tempo." Yet tempo proves a great stumbling block to many conductors. I recall having heard some excellent bands play the beautiful flute duet, *Andante con moto* of the *Pique Dame Overture* in the style of a stilted gavotte—making it as beautiful and as enchanting as a geometrical problem. Other bands played a majestic grand

mark almost in the tempo of a military march, thus robbing it of its nobility of character.

The duty of the conductor is to interpret. To do this properly he must study to attain a logical and artistic interpretation of the composition. Unless he engages in research, learning something of the history of the composer and the tradition concerning the composition, and brings to bear a thorough musicianship and an active imagination, he is not likely to offer a true and effective interpretation of any composition of real merit.

I have known an organization with the most complete and well-balanced instrumentation to play a difficult number without any hesitancy or technical errors, yet secure a rather low rating, due to a mediocre interpretation, lack of tonal balance, good expression and so forth. Had the director engaged a competent conductor to coach him for one or two rehearsals, his band would have won much higher rank.

If our bands and orchestras are to make the advance expected of them, their conductors must study to learn more and more about the fine art of teaching and interpreting music. In the performance of much of the standard literature for band and orchestra, a conductor, if he wishes to stand out of the crowd, needs to inject more of artistry and imagination into his interpretations than has been done heretofore. There is real musical merit and worth in many of the old fashioned overtures such as *Post and Peasant*, *Light Cavalry*, *Orpheus*, *Morning*, *Night and Night in Vienna*, *Stradella*, *Zampa* and *Raymond*, but this inherent value is sometimes too generally accorded them.

The closing movement of *Zampa* overture opens at a tempo of M. M. 90 for woodwinds in hand or strings in orchestra:

Fifty-four measures later the brasses are introduced in the following theme (*fortissimo*) at a tempo of about M. M. 140:

If this movement is played with a gradual crescendo, *diminuendo* up to the introduction of the brass figure it will serve to eliminate the abrupt and disturbing change in tempo. The general

effect will be far more pleasing and logical.

The same point will apply to the third movement of *Raymond* and other overtures having movements of similar character. In the *Raymond Overture*, second movement, the following passage occurs:

If the fourth and fifth measures should be played in the following manner it will be found that a new interest is given the passage.

It should be noted that the next phrase commences, not with the D, but with the group of sixteenths. Needless to say this should be beaten four in a measure.

In the *Marinella*, *Gobsekie's Overture*, the following dramatic passage occurs:

Generally, the snare drum is the only percussion instrument called upon to assist in building the crescendo. The cymbal is supposed to represent the drop of the drumsticks. A roll on bass drum, the head down the incline into the basket. The cymbal is played with a great crash and the tympani roll with a subsiding dim-

This passage represents a highly dramatic moment and should be presented in a realistic manner such as will portray the gruesome event. A roll on bass drum (stand) will add very greatly in attaining the tremendous crescendo required. It should be so tremendous that it leaves the audience holding its breath just as the Parisian crowd held its breath as it realized that the fall of the guillotine was about to end the inglorious career of their tyrannical ruler.

The slithering descent of the knife should be represented by "sliding cymbals"—not by a crash. The ghastly roll of the head down into the basket should be

DIRECTOR OF MUSIC, PHILADELPHIA PUBLIC SCHOOLS

Music Activities in the Public Schools of Kansas City, Missouri

By MABELLE GLENN

DIRECTOR OF MUSIC

(MABELLE GLENN, Director of Music of the public schools of Kansas City, Missouri, has developed many and varied musical opportunities and activities for school pupils in and after school hours. Miss Glenn's success has been brought about by her ability to coordinate the efforts of the Board of Education, the department of superintendence, the teaching force and the local civic and cultural organizations, including the newspapers, into a unified movement for the cultural uplift of the entire community. "Music for every child and every child for music" is a Kansas City slogan. An intimate glimpse into the activities of a department of music of a large city system should afford an inspiration for all supervisors and teachers of school music in order that new horizons may be created and broader policies of administration attempted. In the following statements we have Miss Glenn's point of view and a résumé of the varied activities of her department—shown—Editor's Note.)

IN THIS DAY of specialization even the director of music is sometimes a specialist and does not hold the vision of the needs of "all of the children of all of the people." Some are instrumentalists and think that every child must be taught to play on some instrument. Others feel sure that the way to serve school children best is to develop their sight-reading power. Still others say that a child can grow in music appreciation more through listening than through performing. According to their own special interests they are likely to plan programs that suit them, instead of programs that serve every child according to his needs and his capacity. We should try, therefore, especially to keep in mind that the child is more important than the program. The aim in Kansas City schools is to develop every pupil into an intelligent listener of good music and into a producer of music to a greater or lesser degree according to the natural endowment of the individual.

Music in the Elementary Schools

MUSIC in the elementary schools has been taught by the regular grade teachers, each room being visited once in five weeks by a music supervisor who has not only inspected the work but has also helped the grade teacher by suggestions and by giving model lessons. The time allotment for music in the first and second grades is seventy-five minutes a week and for all other grades is one hundred minutes a week. One fifth of this time is utilized in "active listening" to music.

Classroom singing each year has motivated toward the spring festival, where picked groups from all schools participate in ensemble singing. Every child in the upper grades has been asked to prepare in preparation for these events. In the spring of 1922 a chorus of 1000 seventh grade pupils and 500 high school pupils joined with a community chorus in singing the oratorio *Elijah*. In the spring of 1924, 5000 pupils from grades five, six and seven participated in a festival at Convention Hall, the fifth grade girls and the seventh grade chorists each giving a miscellaneous program, the sixth grade girls of 2400 pupils singing Fletcher's *Walrus*

and the Carpenter with an orchestra of sixty players picked from the high school orchestras. In the spring of 1925 two afternoon programs were given before the Music Supervision's National Conference, the first being given by 800 pupils from grades five, six and seven. Part of the program was sung unaccompanied and part with the Horner Institute Orchestra augmented to sixty players. As a *capella* chorus from the negro schools sang a group of negro spirituals. On the second afternoon 2500 sixth grade pupils sang Edgar Stillman Kelly's *Alice in Wonderland* with the Kansas City Symphony Orchestra. In the spring of 1927, the festival consisted of a high school chorus, an *capella* chorus of 1000 from the seventh grade and a chorus of 500 sixth grade pupils singing *The Childhood of Hinokato* with an orchestra of fifty picked players from the Central Senior High School.

Musical Appreciation

THE AIM of music appreciation is to give every child in the schools such a broad musical experience that not only his child life but also his adult life will be enriched. This training should create among the future citizens of Kansas City a demand for the best in music. Music appreciation in the class-room of the upper grades has motivated toward the Children's Concert Series, which was established in September, 1921. The Board of Education authorized the Music Department to select season tickets to upper grade and junior and senior high school students in the offices of the school principals, each concert costing the pupil twenty-five cents.

In 1921 there were six concerts given by the St. Louis Symphony Orchestra. In 1922 five concerts, picked by district symphony orchestras were brought here by the Kansas City Symphony Association. From 1923 to 1926 the series of concerts was played by the Kansas City

"One day I went to one of our high schools. I was then about behind the stage and stood in the wings. The room was dark, except for the lights on two music racks and a piano lamp. Two girls and a boy were playing a charming trio. No other persons were on the stage. No one seemed in charge, and yet not one of the two thousand students moved or made a sound. The spell of beauty was over them, and behavior was as lovely as the music. This could never have been had they been seated in the seats, but beauty begets refinement, and refinement is the mother of self-control.—W. F. Winsten, Superintendent of Schools, Minneapolis, Minnesota.

chestral instruments to warrant the organization of an orchestra, the Board of Education has sent an orchestra director for one hour each week. Forty-four elementary school orchestras are at present in existence. From September, 1923, to date, an opportunity has been given to all pupils in the upper grades and high schools to study orchestral and band instruments in Saturday classes for beginners.

Piano and Violin Class Instruction

IN SEPTEMBER, 1923, piano class work was inaugurated in the Kansas City Public Schools. The Board of Education authorized the Director of Music to offer instruction in classes of twenty pupils (above the third grade) who had had no previous instruction in piano. In 1923, 1500 pupils took advantage of such classes. From September, 1924, piano instruction for both first and second years has been available in the schools. The number of pupils receiving instruction in the public school classes is constantly increasing, the enrollment this year being 2400.

When twelve pupils in a school apply for violin instruction, the Board of Education furnishes a violin teacher for one hour a week. This year there are thirty-one classes in violin in the elementary schools. Unless a pupil has a very keen ear he must not be encouraged to study a stringed instrument which calls for a keen sense of pitch. Therefore, in the spring of 1927, the Board of Education authorized the Music Department to give certain pitch and rhythm tests by which native capacity for music could be discovered and to make recommendations to the parents as to what instrument should be studied.

Through an individual test given at the end of the second grade and at the beginning of the third grade the child's musical ability is ascertained. While the Music Department hopes to enrich the life of every child in the schools, it does not expect them all to go through the same mill. Individual differences in talent must be recognized. To give to each child the same musical training would be economic waste, though it would be unfortunate not to enrich the life of every child according to his capacity.

Music in the Junior High School

A HEALTHFUL, natural outlet for the pupil's awakening emotional nature is the purpose of music instruction in the junior high school.

First Year Junior High School: A composite course consisting of chorus singing, sight-reading, elementary theory and "active listening" was offered from 1921 to 1927. First junior year high school music has been an elective subject. In April, 1927, the principals in conference with superintendent's office voted that it be a required subject.

Second Year Junior High School: In the second year, music has been elective and pupils have been permitted to choose the music activities in which they wished to engage. Mixed chorus, girls' glee clubs, boys' glee club, orchestra and band have

PROF. CLARENCE G. HAMILTON, M. A.
PROFESSOR OF PIANOFORTE PLAYING, WELLESLEY COLLEGE

Self-Study in Advanced Grades

My ambition is to become a concert pianist, but, as it is impossible for me to enjoy the advantages of a good conservatory, I am trying to do my work at home and later study with an artist.

With my last teacher I did intensive work for eighteen months, working on scales and arpeggios, the "Virtuoso Studies," also studies by Clementi and Bach. Among shorter compositions I play those by Chopin and Brahms.

Please advise me as to just what I should now study, and how just I also have a "Player's Book," "What should she take up next?" I do violin, and her hands are not yet large enough to play the chords with ease.

For comprehensive technical work, I refer you to the "Complete School of Technique for the Pianoforte," by Isidor Philopoli. Advanced studies will include Moscheles' Op. 70, two books, and of course the invaluable Etudes of Chopin, Op. 10.

When twelve pupils in a school apply for violin instruction, the Board of Education furnishes a violin teacher for one hour a week. This year there are thirty-one classes in violin in the elementary schools. Unless a pupil has a very keen ear he must not be encouraged to study a stringed instrument which calls for a keen sense of pitch. Therefore, in the spring of 1927, the Board of Education authorized the Music Department to give certain pitch and rhythm tests by which native capacity for music could be discovered and to make recommendations to the parents as to what instrument should be studied.

Through an individual test given at the end of the second grade and at the beginning of the third grade the child's musical ability is ascertained. While the Music Department hopes to enrich the life of every child in the schools, it does not expect them all to go through the same mill. Individual differences in talent must be recognized. To give to each child the same musical training would be economic waste, though it would be unfortunate not to enrich the life of every child according to his capacity.

Chord and Octave Touches

(1) When preparing pupils for Junior Grade examinations (Toronto Conservatory), I have always had them play chords by the down-arm method. According to the "Touch and Technique," Vol. I, Section 10, "For the advanced grade, chords that contain octaves and dominant and diminished sevenths are to be played legato. Will you kindly explain how this is to be done?"

(2) I notice that Dr. Mason speaks of "single octave chords" and that power is needed in chords; but when I attempt single octave chords I am quite at a loss as to whether to apply up-arm or down-arm methods. I should be glad to know of the various methods of playing single octave chords and octaves, and their application.

(3) In the syllabus of examination work it is specified that octaves are to be played staccato (with quarter, eighth and sixteenth notes), and with the legato and arm touches. I am puzzled as to what is meant by quarter and eighth notes only. What is meant by legato and arm touches? I thought that legato octaves should be played with single arm and up-arm touch only.—A. A.

(1) You will notice that in the left-hand which you enclosed I specify that the chords are to be played with the "legato" or, in other words, with the kind of touch ordinarily used in playing legato. It is impossible to play such chords actu-

ally legato, except by the use of the pedal; but one may secure a near legato effect by sustaining each chord as long as possible before the next is sounded, and, perhaps, by joining one or two notes of one chord to those of another, by changing fingers. Mason's "down-arm touch" is well adapted to such near-legato effects, since it naturally involves clinging to the keys.

(2) There are three ways of playing individual chords. Of these ways the first is accomplished by the "down-arm touch" just referred to—especially adapted to soft, sustained chords; the second, by what I call the *full-arm touch*, when the entire arm from the shoulder is used to drive the keys down, with the wrist held firm as the tone is sounded, but relaxed immediately afterward—a touch adapted to full, sonorous effects—and the third, by the up-arm or *hand touch*, in which the wrist springs up as the tone sounds—a touch best adapted to staccato chords, whether strong or weak. Having command of these three touches, you must consult your own judgment as to which to employ in a given situation.

(3) The legato and arm touches mentioned are doubtless the first two touches described above. I prefer to play legato by alternating the down-arm and up-arm touches, the former employed with the white keys and the latter with the black keys, as in the following example:

Staccato notes are played almost invariably with the up-arm or *hand touch*. This touch is used, as described above, in slow rhythm, but, when the octaves are played in rapid succession, the wrist is thrown into action, and the notes are played like a series of small hammers. Little above the keys (see Mason, "Touch and Technique," Vol. IV, Section 1).

Backward Pupils

(1) I have as a piano student a girl, a Russian who has been studying violin for the past four years. She cannot single notes at all well, but has trouble reading chords. If I play chords for her, she plays them steadily enough when using both hands. I have, however, been having her study for four months. Will you kindly suggest some interesting material on which she can work?

(2) I notice that it is impossible for her to play single notes. Is it impossible for her to play with her fingers alone. She is confused as to me, and she is not in order to produce any single notes. I have been thinking of some technical exercise which will strengthen the fingers of the hand.

(3) Another pupil, about 14 years of age, is slow at reading notes. He memorizes his exercises after I play them several times, but cannot name any of the notes. I have been thinking of some technical exercise which will strengthen the fingers of the hand.

(1) You will notice that in the left-hand which you enclosed I specify that the chords are to be played with the "legato" or, in other words, with the kind of touch ordinarily used in playing legato. It is impossible to play such chords actu-

order, from the bass upward, and then sounding the notes all together. After practicing a hymn thoroughly in this way she should be ready to play the chords as written in slow succession.

Material especially adapted to such a case is found in the forty-three pieces of Schumann's *Album for the Young*, Op. 68 (Presser Collection, Vol. 103). No. 4, 15, 29 and 41 consist almost exclusively of chords, and chords are numerous in most of the others.

Give her plenty of practice in counting aloud and be sure that the material on which the work is not too difficult for her to play without hesitation. If necessary, you may require her to use the metronome, applying it first to simple finger exercises.

(2) Physical infirmities are always difficult to cope with, since each case presents its peculiar problems. In preference to using the entire arm she should cultivate the hand touch which comes by throwing the hand from the wrist. Let her practice the simplest kind of five-finger exercises by throwing the hand into the position A to position B, as the note is played, and immediately falls back to position A, ready for the next stroke:

This touch should help to strengthen the fingers, which should meanwhile be kept as firm as possible, also somewhat curved.

(3) Sight-reading depends less upon naming individual notes than on determining the simple intervals. Teach the pupil, after he has found the first note in an exercise, to calculate thereafter the distance from each note to the next, second, third, fourth and so forth. Thus, in reading this exercise:

he thinks a third up, a second down, a fourth up, a second, and so on.

All this process will be facilitated if you give him at each lesson ear-training in recognizing the simple intervals. Meanwhile, too, continue the exercises in note-spelling. Have you tried Billroth's *Spelling Lessons in Time and Notation*?

Materials for a Young Pupil

I have a pupil of mine, to whom I have given the "Beginner's Book," "Melody Book," by Dorothy G. Blake and "Virtuoso Studies," by Moscheles. What would you advise me to give next in studies, and what other material would be suitable? What is the best book on ear-training?

(1) You will notice that in the left-hand which you enclosed I specify that the chords are to be played with the "legato" or, in other words, with the kind of touch ordinarily used in playing legato. It is impossible to play such chords actu-

order, from the bass upward, and then sounding the notes all together. After practicing a hymn thoroughly in this way she should be ready to play the chords as written in slow succession.

Material especially adapted to such a case is found in the forty-three pieces of Schumann's *Album for the Young*, Op. 68 (Presser Collection, Vol. 103). No. 4, 15, 29 and 41 consist almost exclusively of chords, and chords are numerous in most of the others.

Give her plenty of practice in counting aloud and be sure that the material on which the work is not too difficult for her to play without hesitation. If necessary, you may require her to use the metronome, applying it first to simple finger exercises.

(2) Physical infirmities are always difficult to cope with, since each case presents its peculiar problems. In preference to using the entire arm she should cultivate the hand touch which comes by throwing the hand from the wrist. Let her practice the simplest kind of five-finger exercises by throwing the hand into the position A to position B, as the note is played, and immediately falls back to position A, ready for the next stroke:

Rotation

Now, explain the term "rotary hand motion."—E. H. J.

Doubtless you refer to what is more properly called "forearm rotation," since rotating or circling the hand about from the wrist, and not the forearm, is the basis for a general "limbering up," has no other practical significance for the pianist.

When we sound a given key we must consider not only the up-and-down motion of finger or hand but also its side motion. If we play from middle C to the next C above and then back again:

the hand must evidently move sideways, first to the right and then to the left, as in the illustration.

Now, it has been found that, in sounding the upper C, a distinct advantage is gained by rolling the hand and forearm to the right so that the force of the blow is delivered straight down into the key, instead of obliquely, just as a nail is driven in best by hitting it squarely on the head. Likewise, in proceeding back to middle C, the forearm and hand are rolled to the left so that the force comes directly into this key in its turn.

If we wish to photograph any object we must focus our camera accurately upon it. Otherwise we may find the picture of a cow on the film, instead of that of the friend whom we intended to catch. Similarly, rotation means focusing our hand, by rotating it to the right or left, until its point of gravity comes directly over the key which is to be sounded.

Observe, too, that forearm rotation furnishes an aid to any so-called "touch" whatever—whether finger, hand or arm touch—by means of which an added command over the tone that is desired.

Why not continue with Presser's "Stu-

Shall Johnny "Take" Violin or Piano?

By HOPE STODDARD

A Family Debate of Real Interest
in Hundreds of Homes

IT happened to the writer, who is about as average as they make them—and therefore, likely enough, it has happened to others. When Johnny (we'll call him Johnny) is eight years old, or maybe just six or four, his parents gather around him some fine evening and discuss him until his coat buttons glow with embarrassment and he begins to feel like a disembodied spirit—so little do his opinions seem to count. The question under discussion is, "Shall Johnny Take Violin or Piano Lessons?"

Once the instrument is bought, be it piano or violin, the outlay for lessons and repairs is, in either case, about equal. Therefore the difficulty lies not in the financial field. The point is that one or the other of the instruments must really be better able to benefit Johnny musically, ethically and socially. On this plane the discussion is carried forward.

The Piano

THE instrument of harmony, of tonal combinations, progressions, modulations, cadences—the piano forms the groundwork of musicianship. The keyboard system is a representation of the modern scale system upon which compositions of all the great masters have been based. So indispensable is pianistic training in the art of composition that history gives scarcely a single instance of a great composer who did not play the piano well—and many of them—Chopin, Liszt, Beethoven, Mozart and Bach—were keyboard virtuosos.

Piano lessons are made compulsory for vocalists and instrumentalists, in the best music schools, for the reason that only so can harmonic sense be developed. Improvisation is in its proper sphere at the piano.

Being a staccato instrument, the piano requires a multitude of separate notes to produce the illusion of continuity. To meet this demand constant activity, alertness and strength are required. Perfect coordination between the hands is necessary, since each must supplement the other. "Finger patterns," with their development of the visual as well as the oral sense, are most adaptable to the piano. The feet, as well as the fingers, are made to "think for themselves" through their manipulation of the pedals.

The piano is an orchestra in itself, ranging from the majesty and power of the bass instruments to the lightness and delicacy of the sopranos. Its great tonal range makes it the necessary adjunct of violinist and singer on the concert stage. But the piano stands complete and sufficient in itself.

Though the pianist finds himself to be indispensable in social gatherings and concert halls, he also learns the lesson of modesty when he accompanies an instrumentalist, for here, by listening for the slightest expressional changes in the soloist, he learns to be a good follower as well as a good leader. And it is a saying, "A good slave makes a good master."

The discussion has become rather strenuous and Johnny's parents and aunts and uncles decide that it is time the child was in bed. So he goes sleepily up the stairs. But, as the last sounds of the outside world seep through his pillow, he seems to see himself marching proudly at the head of Sousa's band, with a red uniform on and playing a BIG BRASS TRUMPET! All hail, Johnny! may he discover early in life the great value of music!

The Violin

WE hear of stories in which a virtuoso makes a dying request that he be buried with his violin in his arms. This illustrates the feeling of intimacy that exists between player and instrument. The violin is the faithful dog—nay, the child, of the player. The bow is a fine-haired brush that paints moods as skillfully as a Japanese artist paints his rushes and birds. The left fingers reveal pitch by approximating, as only artistic impulse can, the tonal image existing in the mind. "Perfect intonation" is a precious jewel to be searched for through hours and hours of patient practice and to be preserved with religious fervor.

As a legato instrument, the violin realizes absolute purity of tone, with the possibility of expressing the subtler emotions. There is a rainbow of colors on the violinist's palette—serenity, gaiety, exaltation, gravity, sorrow and great joy. We wonder if it is a coincidence merely that his chosen position is standing upright—one of exaltation.

For such a variety of moods great delicacy and agility are required. There is no instrument that demands more flexibility in the right wrist as it manipulates the bow left and right, up and down, and across the strings. Two hundred strokes can easily be enumerated, and great violinists have computed the number as being in the thousands. In one single bow-stroke a multitude of precepts must be kept in mind.

The fingering of the left hand calls for absolute precision and never-ending activity. In striving for the perfect tone (always held in his mind's ear) the pupil attains a great lucidity of thought.

As to the child's chances for future employment, the violin is the solo instrument in an orchestra: it bids fair to be the instrument of the countryside where pianos are few and piano tuners almost unheard of.

The violin has the rare advantage of improving with use and age. It is therefore as good an investment as property or bonds. But it must be well cared for, and here again the pupil is taught principles of cleanliness and carefulness.

A DOUBTING HEART

ADELAIDE PROCTOR

MARIAN MALCOLM

Moderato

1 Where are the swal-lows fled? Fro - zen and dead, Per-chance, up-on some break and storm-y
2 Fair hope is dead, and light is quenched in night: What sound can break the si-lence of des-
shore. O doubt-ing heart! O doubt-ing heart! Far o-ver pur-ple seas, heath kind-ly
pair? O doubt-ing heart! O doubt-ing heart! The sky is o-ver cast, yet stars shall
shelt-ring trees. They wait in sun-ny ease. The bal-m-y south-ern breeze. Far o-ver pur-ple seas. They wait the southern breeze
rise at last. Bright-ness for dark-ness past. Bright-ness for dark-ness past. The sky is o-ver-cast. Yet stars shall rise at last
To bring them to their north-ern home once more.
And an-gels sil-ver voi-ces gent-ly stir the air. O doubt-ing heart! O doubt-ing heart!

A great success as a piano solo;
much in demand for Violin.

The SINGER'S ETUDE

Edited for May by
EMINENT SPECIALISTS

IT IS THE AMBITION OF THE ETUDE TO MAKE THIS VOICE DEPARTMENT
"A VOCALIST'S MAGAZINE, COMPLETE IN ITSELF."

Outline of Study for Singers

By F. H. HAYWOOD

WITH A FIRM BELIEF that the early years of study, for a great majority of students of the Art of Singing, are swamped by a flood of miscellaneous inaccuracies, a course of study is here outlined. The intention is to have it as comprehensive as the space will allow, and list the essentials as they properly relate one to another, the section pertaining to voice culture, or vocal development, being intentionally omitted as it has been often so clearly presented by many masters of the subject. This outline is therefore restricted to the subject of song study.

The singer has several channels through which he makes his appeal to his auditors:

- (1) To the sense of hearing, by means of beautiful tones.
- (2) To the physical sense, by establishing a vital and regular rhythmic pulse.
- (3) To the intellect, by evidence of perfect workmanship (accuracy of reproduction).
- (4) To the sight, by making a well-poised, personable, but sincere, appearance.
- (5) To the emotions by vivid interpretative treatment.

Essentials

IN LISTING the essentials of successful song-singing, one finds that they fall into two classifications:

- (1) The scientific, governed by arbitrary rules and laws that apply to all individuals alike (herein considered under the heading, "Style").
- (2) The artistic, governed by subtle principles which are arbitrary only in a very general sense, their successful development in detail being dependent entirely upon the re-creation of the personality of the individual singer (herein discussed as "Interpretation").

Style

STYLE, the keynote of artistry, pertains to the accuracy of all details involved. It is the faithful reproduction of the composer's message. The elements of style are:

Phrasing, musical punctuation, is dual in nature—a "Melodic Phrase," a combination of related notes which make a total idea; (b) "Text Phrase," words related in completing a thought.

Breath-taking is determined by phrasing. A complete breath may be taken only at the end of a "Melodic Phrase;" an emergency or catch breath may be taken within a melodic phrase, if continuity is not broken, but only between "text-phrases."

As the working division is the phrase, correct phrasing should be marked before further study.

Rhythm, physical in appeal, sets to order and propels melody. It is triple in nature, (a) "Fundamental Rhythm" marking the metric pulse, regularly recurring accents, (b) "Note Value Rhythm," the relative time value of notes measured on the "Fundamental Rhythm," (c) Tempo, the pace or rate of speed at which the metric pulse proceeds.

Effective rhythmic demands not only mental analysis but also a keenly developed physical, rhythmic sense, for its vital performance. Rhythmic sense is the greatest of all essentials, but usually the most outstanding shortcoming of singers in general.

Melody is a flowing of tone on a succession of varying pitches, punctuated by phrasing and usually the melody is obviously the essential requirement is accurate intonation. An often-overlooked con-

sideration is the proper relation of the voice part to the harmonic structure.

Diction, or recitation of text, involves accurate rendition of vowels, vocal consonants, consonants, and their combinations in the pronunciation of words.

(a) All vowels must have in common the fundamental elements of efficient tone quality, yet the characteristic elements which differentiate one vowel from another must be clearly defined on any pitch, loud or soft.

(b) Vocal consonants (auxiliary vowels) are the consonants that can be extended or sustained. Following a vowel they should be allowed a small part of the time allotted and be hummed. Before a vowel they should be treated as other consonants.

(c) Consonants which produce no sound unless associated with a vowel, provide types of beginnings or endings for vowel sounds. The characteristics of individual consonants must be distinctly articulated, and with such agility that they make no undue impression on sound than a camera shutter on light. Sluggish consonants distort vowels so that they not only cannot be understood, but also their tone quality is marred.

(d) Pronunciation pertains to the proper formation of vowels and consonants into words and a fluent continuity of word progression, in such a manner that the ideas represented by the text are easily received by the auditors.

Tone Quality. Tone quality must be efficient, that is, it must meet all the demands of song-singing, and must be produced in such a subtle manner that the process is not obvious and that it appears easy to do. An efficient tone quality demands: (a) Beauty, (b) Sonority (carry-

ing power), (c) Character (emotional value), (d) Vitality.

Memorizing is most essential. A few singers of great reputation resort to the holding of a word book; but this gives an aspect of uncertainty to their performance. They would make a still greater impression without the word book. A very large percentage of singers memorize the music long before the text. However, the memorizing of the text should be the first step in the study of a song.

Poise pertains to the deportment of a singer before an audience. The most desirable considerations are:

- (1) An attitude of sincerity and authority in delivering the composer's message.
- (2) Drawing and holding attention to the work performed rather than to the performer.
- (3) No distracting eccentricities. Conduct should always be in good taste.
- (4) Attitude toward audience amiable but not intimate.
- (5) Continuity of facial expression and body poise, beginning with the first note of the accompaniment (whether or not the voice begins immediately), through all pauses, and until after the last note of accompaniment at end of the song.
- (6) Do not sing at audience; sing to yourself, and they will hear it.

Interpretation
INTERPRETATIVE treatment begins after all the elements of style are thoroughly mastered. "Style" provides an artistic photograph in which all details are perfect but equal in importance. "Interpretation" provides the lights and shadows (contrast of colors) which give the relative importance of details (perspective), thus creating an illusion which gives an

aspect of reality to a faithful reproduction; that is, it characterizes.

Mood—Admitting music to be a language of the emotions, one must endeavor to characterize it. To interpret song one must sing with the sort of display of emotion that will draw a sympathetic emotional response from the audience. A "mood" is the atmosphere created by an emotional reaction, or a combination of emotional reactions. The key to the emotional content of a song is the text, which will reveal an infinite variety of moods to be interpreted or explained. One must study the work for the great prevailing mood and the subordinate moods. This requires creative imagination rather than imitation.

Mood Portrayal—The singer may arouse an emotional response in his auditors by means of:

- (1) Tone Quality, using the character of tone most vividly representing the mood.
- (2) Significant Accentuation, the selection of the word or words of a phrase most characteristic of the mood and so treating them that they will stand out in high light while other unimportant words remain in the shadow. Significant accents of this fact. A man is said to have called up a powerful radio station to complain of one of its singers. "Confound that woman!" the man exclaimed wrathfully. "She sang so sharp and so loud that she broke a valuable glass vase

Mood Requirements:
(1) Unity—The prevalence of the leading mood.

- (2) Variety—Subordinate use of fresh ideas, each in its own mood, used to strengthen the prevailing mood by relieving it.
- (3) Symmetry—True balance of the greater and lesser moods.
- (4) Nuance—Subtlety of interpretative treatment, achieved by gradual shading from one color to another or from one tempo to another, the singer's method of obtaining effects is not obvious.

Technic
TECHNIC is triple in nature. (1) "Vocal technic" is the exercise of ability to sing accurately any melodic progression.

(2) "Technic of Style" is the ability to apply accurately all the elements of "Style."

(3) "Interpretative Technic" is the ability to characterize one's singing through effective interpretative treatment.

The main requisites are fluency, simplicity, continuity and subtlety.

Words and Singing

By CHARLES TAMME

IN SINGING come from the speaking voice. If the speaking mechanism is incorrectly used it naturally follows that the singing mechanism will also be faulty.

The first thing to be done in singing is to learn phonetics, what it is and how it may be put to practical use. The word "phonetic" is derived from the Greek word "phone" meaning "sound." It is literally the taking of a word to pieces and examining its composition so that a knowledge of its proper sounds may be gained.

When the correct sound is understood then the manner of producing this sound with the mechanism of the voice must be learned. That is where real study begins. Both the correct sound and the manner of producing it must be studied together as they are dependent upon one another. In

the voice of the late Enrico Caruso was so powerful and vibrant that it is said he could shatter a thin wine-glass by singing into it a single tone. This is undoubtedly possible. Other singers in the past have done it. But it is only a certain tone which will break a glass—the tone to which that glass is naturally keyed. All the other tones in the gamut will fall even to chip it.

A story is just now going the rounds around of this fact. A man is said to have called up a powerful radio station to complain of one of its singers. "Confound that woman!" the man exclaimed wrathfully. "She sang so sharp and so loud that she broke a valuable glass vase

The main requisites are fluency, simplicity, continuity and subtlety.

the voice plays a most important part. Therefore, in learning to sing, the vowel sound must be mastered.

The Five Italian Vowels
THERE ARE FIVE vowel sounds as accepted in the international phonetic chart, and these may be readily found in any good phonetic dictionary.

But for simplicity and practical demonstration only the five Italian vowels will be used. These are A, E, I, O and U. The best one for the beginner is the neutral vowel "A." When one is mastered then the singer should learn the others in the order named. The reason why one should begin with A is that it is less likely to interfere with this

(Continued on Page 389)

Singing Style

By JOHN C. WILCOX

SINGING STYLE is based upon sound musicianship, a knowledge of the history of musical periods and their traditions, familiarity with the characteristics of national "schools" of composition, and a technical facility in vocalization that will make possible a performance that translates all this information into vitalizing song expression. With this sort of background the singer may safely let his individual feeling color his interpretations. The student singer will do well to accept

the guidance of more mature musicians in matters of style until he has himself reached a point in his education which gives him an equal right to indulge his individual taste.

The singer who merely imitates the style of others will never be a convincing interpreter; but there is no virtue in originality which is unguided by information. There are customs and manners to be observed in singing just as truly as in the social contacts of life.

Destructive Vibration

By C. HILTON-TURVEY

The voice of the late Enrico Caruso was so powerful and vibrant that it is said he could shatter a thin wine-glass by singing into it a single tone. This is undoubtedly possible. Other singers in the past have done it. But it is only a certain tone which will break a glass—the tone to which that glass is naturally keyed. All the other tones in the gamut will fall even to chip it.

A story is just now going the rounds around of this fact. A man is said to have called up a powerful radio station to complain of one of its singers. "Confound that woman!" the man exclaimed wrathfully. "She sang so sharp and so loud that she broke a valuable glass vase

of my grandmother's that was standing on the mantel."

There is recorded in biblical history a tale of the walled city of Jericho, which supposedly withstood all efforts of the invading army until, in obedience to their prophet, the trumpeters in massed formation marched around the city all blowing a single note—the exact note to which the great walls were in tune—until the stone crumbled and fell.

There is more magic in the world than we have yet discovered. But it is "white magic," and it goes by the invisible and exact laws of the universe.

Words and Singing

(Continued from Page 388)

vowel than with any of the others. Once the vowel "A" is established the others are learned easily.

There are two important things that must be known by the beginner about "A." One is that "A" has a very definite sound. The other is that it is produced correctly by a certain definite physical action.

It is not easy to explain the exact sound of "A" in writing. The only way to do so is to resort to familiar words which contain the desired sound. Perhaps the best word is "father." However, it is perfectly possible that the person speaking the word "father" may sound the "A" with physical refinements, such as a contracted palate, a stiffened tongue, a tense jaw and many other muscular restraints.

The second condition for the correct "A" is less difficult to demonstrate. Stand before a mirror, open the mouth wide enough to admit two fingers, one on top of the other; then withdraw the fingers keeping the mouth at this width. Without moving the head or disturbing the jaw, say "A." Now note if the tongue draws back from the lower teeth or if the face changes as in the moving of the lips, push the tongue into the roof of the mouth at the base of the neck and around the throat. If any of these things occur the sound is incorrect.

The correct sound of "A" requires simplicity. The tongue should be lightly against the lower teeth, while the sound is being produced, without lumping or contracting at its base. When this has been accomplished and the other wrong habits overcome, the beginner is ready to proceed with the formation of the other vowels. A warning might be added that these difficulties are not overcome at a moment's notice but that they require steady, painstaking practice. And all this future singing may be said to depend upon a cor-

rect "A," it is well to understand its production thoroughly.

Linking Note and Syllable

EVERY NOTE sing represents a vowel, and every vowel is a nucleus of a syllable. Every syllable either begins or ends with a consonant. In the study of a song the singer must be sure, absolutely sure, of the exact articulation of his consonants and a perfect formation of the vowel sound. Indeed it is a wise plan to recite the words of a song over and over until the perfect habits of articulation and pronunciation have been formed. Then this knowledge should be applied to the singing of the song.

There must not be any confusion regarding the distinction between the pitch sound and the vowel sound. The singer controls his pitch sound through the medium of his ear. No attention whatsoever should be given by the singer to the muscular action involving the movement of the larynx in the formation of the pitch sound. This is unconsciously performed under the guidance of the ear. If the singer wants to produce a high note he does not do so by a conscious manipulation of his throat but by hearing the sound and producing it automatically. Yet the sound is produced so characteristically and correctly pronounced.

It is very important to understand this difference between the pitch sound and the vowel sound. Remember that the pitch mechanism, when left alone, works perfectly if the vowel sound is guided correctly. Articulation and vowel formation are most important in singing. They control the word and the word is the basis of all good singing. So one can see why a complete mastery of phonetics is absolutely essential. The singer must understand the secret of clear enunciation, and clear enunciation is a long step in the direction of right tone production.

Kimball Piano, Chippendale Design

Your Future in Music—and the KIMBALL PIANO

ACCOMPLISHMENTS in Music! Your aspirations lead you out into the "afterwhiles," and you know that you need a piano that satisfies at every point—tone, action and lasting quality.

The Kimball piano is famous for the very qualities you must have for success—correct tone, evenness of scale, responsive action. There is ample proof that all these qualities in the Kimball have stood the test of time. The most critical judges have bestowed unstinted praise.

Of perhaps greater importance to you is the part it has played in developing musical talent, shown by the number of homes in which children have "grown up with the Kimball"—households numbered by the hundred thousand. Yet, notwithstanding the great demand, Kimball prices have always maintained a consistent moderation.

Catalogs on request. If you are not conveniently near to a Kimball dealer, we can supply you direct.

The ORGANIST'S ETUDE

Edited for May by Ralph Kinder
Eminent Organist and Writer

IT IS THE AMBITION OF THE ETUDE TO MAKE THIS ORGAN DEPARTMENT
"AN ORGANIST'S ETUDE, COMPLETE IN ITSELF"

Twenty Vital Points in Organ Study

By RALPH KINDER

RALPH KINDER

I. Don't Neglect Piano Practice
ONE of the greatest shortcomings of many organ students is that the study of the piano is neglected. During my preparatory years, I studied piano much longer than the organ; that is, I had many more lessons on the piano than I had at the organ.

The digital technique that one must have for fine organ playing can be far better acquired at the piano keyboard than on the organ manuals.

The new type of organ, with its highly developed electric action, makes demands upon the wrist. In order to train the wrist to meet these demands, a special kind of technique must be acquired. This can be best accomplished through practicing scales and octave studies with the staircase scales. Altogether too few studies of this kind are given to the average pupil.

In fact I have found that scales in tenths, arpeggios in various forms and Czerny, Cramer, Moschles and Chopin studies are even more valuable practiced on the piano than the prosaic studies of Rink or Stainer, practiced on the organ.

The boy or the girl who cannot play the piano well is not likely to get very far at the organ. A great many students foolishly put off their music because they have no organ to practice on. But practice time may always be very profitably spent at the piano.

II. Slow Practice

IN ORGAN study as in piano study the curse of practice is "hurry." The best pupils are those with temperance. Such pupils are impatient and anxious to get to the enormous advantage of slow practice, particularly in organ playing, it is absolutely impossible to produce clear, artistic, systematic, finished playing if there is any suggestion of carelessness or hurried practice. The teacher can preach his head off with the impetuous temperamental pupil and still the pupil when playing alone will rush ahead and ruin his own chances.

The only scientific governor of such pupils is the metronome. Once the pupil is converted, his own common sense will show him that "making haste slowly" really has its significance—that he can actually get ahead far faster, with a little ticking monitor invented by Maelzel, than he can without it.

III. Continual Review

ONE of the great blunders in organ study is the practice on the part of some students of permitting works they have studied in past months to slip out of their fingers and out of their heads in favor of new compositions. The students should be able to play the compositions they learned last year just a little better off the slate," as it were.

Review, review, review! Do not give all your attention to the construction of your musical building and permit the underpinnings to be weakened. An old piece should be played as often as a new one to insure real and worth-while progress.

IV. Practical Knowledge of Harmony

THE LACK of a good working knowledge of practical harmony obliges the student to take almost twice as long to get the results as would be necessary if he took part of his time in getting down to hard, actual work to learn the backbone of music. This is of really great importance.

The mind should be trained in advance of the fingers. The various chords of music should be as familiar to the student in all their different spellings as his own name. Chords are musical words, and until the student can recognize them and instantly understand their relations and uses, he is in the "alphabet stage" in musical progress. Harmony should be studied at the keyboard and with one who knows its uses, not just its theories.

V. Organ Construction

THE ORGAN is the most complex of all musical instruments. One may play the violin, the piano, and even the organ without knowing anything about the machinery inside the case; but in the instance of the organ, such ignorance is a terrible handicap.

I wonder how many students realize the necessity of learning about the construction of harmonies in music, in order that they may know why the organ builder used for example a 1-6-3 stop in his specification. The average student knows that a 5-rank mixture sounds five tones. Does he know which five tones or harmonies are intended when he uses this mixture stop? Does the student know that there are eleven harmonics above a root note and also some harmonics below? The organist who explains to his pupil that an organ construction and that a figure, often an "8" on a stop is for the intensification of the harmonics of the 8-foot tone, is not just its theories.

VI. The Importance of Silence

SOME of the greatest effects in organ playing are made by silence followed by sound. For instance, a gun fired on a sion than a gun fired in a foundry. Silence is the canvas upon which the musician paints. For instance, one of the finest effects in organ playing is the effect of just before the final chord of a great organ composition (let us say the Widor "Symphony Number VI," first movement) by a pause of, say, three seconds.

Most pupils have very little pause. They are afraid to make pauses long enough to effect climaxes. They rush from chord to chord, and their playing lacks character. "Silence is golden" in organ playing, even as in speech.

VII. Purposeful Study

IT is very hard for some pupils to realize that the teacher gives certain studies with a definite design. He is in-

clined to think that everything that is given him is given him only to tickle his musical consciousness and to please his ear. Teachers, you know, prescribe studies like medicine. No really worthwhile teacher asks the pupil to do anything that he knows he can do well.

He picks out those compositions from which the student should learn the principles of good organ playing. The repertoire comes later.

VIII. Learn Everything Well

NO composition should be dismissed until it is absolutely mastered. One of the astonishing things about some organ pupils is that they want to rush on to new compositions long before they have mastered the compositions on which they are working.

Progress on the organ does not at all consist in getting a hodgepodge lot of half-learned pieces. It is far better to play one piece in a masterly fashion than a hundred in a bungled style.

Edward D'Ery, one of my teachers at the Hampton Organ School in London, started me on Reubek's Ninety-fourth Psalm Sonata, and I worked on that by myself for fourteen years (not consecutively) before I performed it in public.

IX. Appearance

ORGAN students often make a great mistake in judging the performer or the student by his appearance. Often the student who comes to the organ studio in a five hundred dollar frock coat may look down on the student in a shabby ulster. The student should come to realize that all are in a great fraternity. The one thing that counts is ability.

Some students imagine that they can buy their way to success. The fact of the matter is the only currency that can buy success, particularly in as exhaustive a study as organ playing, is "work." In fact, the student who is thinking of his social importance, his means, his expensive clothes, his titles and his superior rights as an individual is often eclipsed by the humble student in very moderate circumstances.

X. Praise Others

THE STUDENT should learn from his fellow students and praise the foremost musicians for their efforts. A prominent musician once said that he could tell a good musician, even before hearing him play, by his remarks about other musicians.

It is an old saying that those who do not mind their own business rarely have any business to mind. The worth-while students has enough to do to succeed without spending time picking faults in the work of others. If you can hear him anything to praise, better keep your mouth shut than his. It is no fault-finding, criticize your own playing. If you are really a worthy student you will find plenty to criticize.

XI. Adaptability

ONE of the first things that an organ student must learn is adaptability. This is due to the nature of the demands placed to be made upon all experienced players. That is, while pupils in general are all pretty much alike, with some slight difference in tone and touch but with no radical keyboard difference, organs are

Allentown, Pa.

subject to an enormous variation in size, arrangement of the stops, couplers, pedals, manuals, and so forth. Moreover, the same organ played in two rooms might convey a wholly different acoustical effect. Therefore the student should learn to aim at similar effects on all of the organs he encounters. On an organ in a large building a passage might be played effectively staccato—whereas the same passage on an organ in a smaller building might sound more effective when played legato.

My own organ, for instance, has forty stops. Some of my pupils practice on a twelve-stop organ. They are urged to try to get the same effect on their organs as they achieved at the console of their teacher's organ. This may involve an entirely different touch and choice in registration, but it is mastery of just these things that makes the study of the organ so very fascinating.

XII. Do Not Lose Your Poise

OBVIOUS blunders are fatal in organ playing. Everyone, even the greatest master, makes mistakes in striking wrong pedals, pulling wrong stops, turning two pages at once, and so forth. But it is the legitimate part of the pupil's playing technique to know how to cover a mistake without any outward sign of annoyance. I have known pupils in public recitals who actually advertise mistakes by their disconnected behavior. This, of course, is a great detriment. If the pupil makes a mistake, he has painted the notes on the canvas of time. They can never be changed, because the time is gone. The only thing to do is to forget the blunder and try not to make a similar error again.

XIII. Anticipation and Preparation

THE STUDENT must learn that two of the greatest secrets of organ playing are anticipation and preparation. He must make up his mind, long beforehand, just what stops he wishes to use and must plan to get them out in advance, so that when he comes to the spot, he will not have to hold a chord with one hand for five minutes and also hold the audience in suspense in the meantime, while he fiddles around the console. He can avoid this condition by regulating his personal affairs so that he is habitually forehanded. A careless, procrastinating character can hardly expect to become a successful organist. By this I mean that the person who is always putting things off and is never on time, always late, always postponing, is likely to develop in his own playing these same faults and really not understand what is the matter with him.

XIV. Orchestration Makes Itself Evident in Organ Playing

ORGAN students should aspire to orchestral effects. The organ is three-fourths orchestra. There are four families of tone—strings, flutes, reeds and

diapasons. The theater organ has also added the percussions.

The analogy to the symphony orchestra is also apparent at all times. Lucky is the organ student who has had a good course in orchestration and has had the privilege of attending fine orchestra concerts continually. In these days the organ student has an enormous advantage in being able to hear fine orchestras over the radio or on the phonograph.

If he develops his text in this way he will learn to know his performance with judgment and his pupils practice on at least be able to detect and identify the various instruments from their tone quality, so that he may simulate them in his playing when such effects are demanded.

XV. Organ Touch

THERE are three important actions in performing any note or chord: first, how the key is struck; second, how the key is held; third, how the key is released. Far too little attention is given to this subject. With some it amounts to "hit the right key and let it go at that." With others it is as if should be "correct organ touch first," the correct key next.

XVI. Practice Difficult Passages

THE STUDY of the organ is a huge undertaking. The student must come to know his organ. Over and over again he must make up his mind to practice in such a way that they have wasted hours. Practice should be aimed at accomplishment and never at mere repetition. If the student can play a piece perfectly well he should not spend his time upon that; he should spend it mastering things that are obviously difficult.

We do not have to practice sleeping or walking, once we have mastered the ability. Why idle away precious moments at the organ in doing something that can already be done perfectly well? Concentrate on real difficulties and save valuable time.

XVII. Rhythm and Accent

ONE OF the great difficulties of organ students rests in proper rhythm and accent.

Rhythm in playing the organ is far more difficult than in playing any other instrument, because of the difficulty in making accents; and yet both rhythm and accent can be made at an organ as clearly as at other instruments. I often wonder if music is not lifeless when rhythm and accent are absent. Touch and accent are preached by me from Monday to Saturday, for without them the core of real organ playing has not been reached.

XVIII. The Teacher Only a Guide

THE BEST teacher in the world is at most a guide. The pupil's progress depends largely upon the time he spends in front of the keyboard of his own piano or organ, hard at work.

He should take home from the lesson a kind of mental photograph which should last at least until the next lesson. The pupil who goes to the highest priced teacher feeling that the teacher's reputation will make him a good musician without practice is wasting time and money.

XIX. Originality an Asset

THE teacher points the way; the pupil must travel by himself. Since no two organs are alike, the pupil must learn that the organ is an instrument of compromises. He must not take every registration mark, every note, every rest seriously. There is no instrument which calls for more taste and practical "horse sense" than the organ. Think for yourself! Act for yourself! Never fail to remember that the

(Continued on Page 419)

Alfred Hollins,
Master of the Theatre Organ,
Edinburgh, Scotland.

Alfred Hollins
says of the Kilgen

"It was a great pleasure to give a recital on your fine Organ in the Third Baptist Church, St. Louis. The voicing throughout is good and even, and the action very prompt in both attack and release. I am also very glad to have had the opportunity of trying some of your small instruments, and I find the same care bestowed on every detail of these as well as in your larger and more important ones."

(Signed) Alfred Hollins.

It is interesting to note that Mr. Hollins, like many another famous organ master, was particularly impressed by the uniformity of tone and quality in all types and sizes of Kilgen Organs. For, in the least as well as the greatest, there is but one Kilgen quality—the best that three centuries of organ-building has taught.

The impressive roll of great Organ Masters who know and praise Kilgen Organs includes such famous artists as Yon, Renzi, Hollins, Davis, Vieme, Diggle, Goldworthy, Carpenter, Biggs, Cowper and Thompson, to mention only a few among the many.

The VIOLINIST'S ETUDE

Edited by
ROBERT BRAINE

IT IS THE AMBITION OF THE ETUDE TO MAKE THIS VIOLIN DEPARTMENT
"A VIOLINIST'S MAGAZINE, COMPLETE IN ITSELF."

How to Master the Minor Mode

By EDWIN HALL PIERCE

D is the fourth step in each scale.

E is the fifth step in each scale.

F and G are different (but compare the

"melodic minor" at this point).

G is the seventh step in each scale.

A is the eighth step in each scale.

Before we leave it, let us also note the

location of the semitones: in the major

scale they are found between G and D and

between G and A; in the minor scale they

are found between B and C and between

G and A—in one case different from the

major and in the other case like the major

scale. In the minor scale the semitone is

extra wide interval where the fingers must be

more than usually separated. This is called an

"augmented second," and is always

found in the "harmonic" minor scale, but

never in the "melodic."

UPWARD

Major A G F E D C B A

Minor A B C D E F G A

There is only one note different—G and

C—but that is a vitally important differ-

ence.

DOWNWARD

Major A G F E D C B A

Minor A G F E D C B A

Here the minor scale shows three

differences: G instead of G \sharp , F instead ofF \sharp , and C instead of C \sharp . The other degrees

of the scale remain the same. Notice that the

"descending melodic minor" uses ex-

actly the same letters as are found in the

relative major (not the tonic major) only

that it begins and ends on A instead of on

C.

To Sum Up

THE SIXTH and seventh degrees of

the scale assume three different forms

(Continued on Page 393)

The Melodic Minor Scale

THE DESCENT of the "melodic" minor scale is different from that of the ascent, so we must make two sets of comparisons with the major.

Take Your Choice

THERE ARE two ways of considering the minor scale in relation to the major: by practicing the relative minor (that having the same signature as, for instance, C major and A minor) or by practicing the tonic minor (that having the same key note as C major and C minor). Either way is theoretically correct, but I have found the latter way much superior in its practical results.

We shall presently take up the manner of practicing the minor scale, but to clear the ground of a possible confusion of thought, we would remind the pupil that "relative minor" and "tonic minor" are not two sorts of minor scales, but only terms used to express their relationship with one or another major scale.

There are, however, really two sorts of minor scales, the "melodic" and "harmonic," which differ decidedly from each other. In most instruction books the "melodic minor" is first taught, and the "harmonic minor" is rather slightly treated. This is a mistake as it furnishes the best understanding of the whole subject, and although composers as a rule are still much in evidence for ignorance of it to be inexcusable. We shall, accordingly, take it up first, for convenience under the harmonic scale of A minor and comparing it with the scale of A major. (Let us begin on the open A string of the violin.)

A B C D E F G A
A B C D E F G A

Now compare these two lines of letters. Which notes are alike and which are different? (Do it with your violin in hand, please.)

A is the first step in each scale.
B is the second step in each scale.
C and G are different! Right here is the critical point: the notes of a scale major or minor, namely, its third degree.

THE CREMONA "FAMILY TREE"

The Lean Year

By CHESTER MOODY

THERE IS an "Average Child" whose parents have bought an endearing "fiddle" for a present on his twelfth birthday and have started his lessons with Mr. B.—who is the teacher of one of the boys in the next apartment. The apartment rules forbid practicing before nine in the morning and after eight at night; so this child snatches a brief hour from his playtime between school and supper—that is, if sister isn't playing the "latest hit" or brother showing his friend Bob, how to tune in on Valparaiso. In the evening company comes and the child is told to play, only to be scolded roundly afterwards if he makes a mistake.

Mr. B.—happens to be a good teacher; and, since the child is anxious to learn and makes use of every odd minute to practice, he progresses in the right direction. At the end of six weeks, however, his parents shake their heads dubiously. He has not made a cent from his music and his new fiddle cost two hundred dollars. Since he does not take to "jazz," the chances are he will never qualify for a dance or "movie" orchestra. So at eighteen he gives up lessons and, having finished high school, finds work that is more immediately lucrative.

A Musician Marooned

OUR PARTICULAR Average Student becomes a teacher in a rural school. Nothing from his past is granted him but his violin, six years' violin training and his own will to succeed. There is no possibility of private instruction, no chance of hearing music, and no violoncello, no radio, no piano nor organ in the farmhouse, ten miles from a station, where he is "boarded."

Moreover there is a distinct and prevailing opinion that music is a waste of time and that to go to one's room to practice is "stuck up." "Stay right here," Mrs. M. says genially. "Anna can go right on with her churning; Ray can finish laying the carpet; and Mary can set the table. No, don't move! She can scout under your left arm. You won't bother us a particle."

Whether he stays or goes to his room, the student begins to look upon his practicing as a "stunt" or a par with churning and "settin'" the table.

The problem of no music store is a serious one. He may look through the mail-order house catalogues and examine the bargains in strings and rosin; but if he does not take more thought for the future than this, he will soon be reduced to a domino for a bridge, and Betsy, the horse, for a chess set.

Nowhere is there a friendly eye or an encouraging word in regard to his progress. In an ill-placed joke regarding "kindling wood" on a winter morning the violin receives its only designation. Added to this is the impossibility of practicing in a bedroom the temperature of which is hovering near zero.

The Fruit of Struggle

YET SOMETIMES only one thing will bring genius to light—adverse circumstances. The Average Young Violinist, having no alternative, turns to his own personality.

From it he constructs, first of all, an instructor. He gathers all the precepts he

Hearing and the Violin

By J. ENTWISLE

PUPILS who can not be taught to play even a simple scale in perfect tune fall to the lot of near-vision teachers. Some of them miss their vocation as hopeless. Others keep them, particularly if the fees are needed. It is always well to tell the wayward pupil that he will never make a musician, but this should not be done hastily.

The instance of a pupil who could not play in tune at any time comes to mind. Her mother on being told by the teacher that it was a waste of time and money attempting to teach her daughter the violin, exclaimed, "If you cannot teach her, someone else will and look her up another teacher, with no better results. After a while she gave up the violin and started to learn the piano, paid for lessons for four years, but made no definite progress. The teacher finally came to the conclusion that he was taking money without giving benefit in return. So he advised her to try some other instrument and left her to choose for herself.

New pupils should be tested as to hearing and voice before signing up for lessons.

The ears are tested in a quiet room, a tuning fork, a ticking watch, or the whispered voice being used. The pupil stops one ear with his finger and notes the distance at which hearing ceases. Then the other side is tested in the same way and the results compared. If there is a marked difference in the distances the pupil is told to go to see a doctor or ear specialist and come back when the ears are normal. Of course there are cases where the hearing is defective, but adenoids, chronic catarrh, tonsils, impacted cerumen, fungi, ear-tubes or foreign bodies in the external auditory meatus can be relieved and cured.

To test the voice, pupils should sing a scale, ascending and descending, then in thirds and fifths. If they are very young and the scale is unknown to them, they can follow the teacher's voice or instrument. If they repeatedly sing flat or sharp at some particular part of the test they are advised to see a specialist and come again in a week or so. But mostly these pupils who fail on the voice test are not promising material for violinists.

The Lean Year

(Continued from Page 394)

can remember from his former teacher. He writes them down:

1. Right thumb-nail and first finger pinching the bow.
2. Straight bowing.
3. Long sweep across strings.
4. Tip bow on far side of hairs.
5. Left arm under violin.
6. Fingers ready to drop on strings.
7. Firm hold of violin at the chin-rest.
8. Fingers down on strings when they do not interfere with the sound.
9. Fingers pressed hard on strings.
10. Weight on left foot.

But the instructor is not created out of such meager directions. The true precursor rises from the soil, formed by sincere desire and unflinching determination. His words are not easy to record and the student must fairly hold his breath to catch them. He says:

1. Speak out through the bow and strings in spite of your impetuousness of finger, muscle or instrument!
2. Never forget it is not the exercise, the piece, the type of art, but beauty in your own soul that you must strive to express.
3. Nurture a belief in the worth of music. Resolve to hold the rapture of it deep. Then the expression will be inevitable.
4. Remember, no practice is of value unless the brain and soul are benefited thereby.

Thus speaks the instructor of the student's creation: an instructor who follows his pupils to the ends of the earth. The student also seeks to hear some music other than his own. If there is a radio within a radius of two miles, he searches it out and gets acquainted with its owner.

Concrete Air Castles

THE STUDENT creates an incentive—a tangible goal toward which the mind struggles—out of the very difficulties which surround him. He plans to continue his lessons at a certain date. This is no day-dream, but a fact based on a harboring of mental and physical forces and an accumulation of the necessary amount of money. He plans a future in which music will come into its own in which he will play for others who understand it; in which he will grow daily to a greater knowledge of his possibilities.

As the months go by the violin that frail piece of wood—becomes a veritable household god, the one link between harsh surroundings and spiritual joy. The touch of the strings, the drawing of a single tone from the bow bring back a multitude of memories and implant a thousand aspirations. The end of the year finds the student far less starved than when he began. He has learned to hear music, drill music, yet never once think or live music. Discovering rhythm in rippling grass and melody in the boom of bells, the student trades the same note that Beethoven, Schubert and MacDowell loved to follow.

By comparing each major scale note by note with its tonic minor, the instrument in hand, the pupil may soon master thoroughly this somewhat difficult subject.

"I use thin strings because they suit my style of playing."

—PAGANINI.

Slippery fingers

SUDDEN nervous perspiration! How uncomfortable it is when it makes the fingers slippery—untrue.

Experienced musicians know that the regular use of Odorono keeps the fingers comfortably dry. It also prevents perspiration-emergence and offense from noticeable odor. Checking perspiration in small areas with Odorono has no effect on health. Physicians recommend it where perspiration is annoying.

Regular Odorono (rubbery colored) brings freedom from moisture and odor used the last thing at night once or twice a week. Odorono No. 5, milder (colorless) used daily or every other day, night or morning is for sensitive skins or hurried use. At toilet goods counters 35c and 50c. Or send 10c for 4 samples to RUTH MILLER, The Odorono Company, 330 Blair Avenue, Cincinnati, Ohio.

Many Courses Lead Nowhere. They End When the Pupil Is Only Two or Three Steps on the Way. Not So

THE STANDARD GRADED COURSE

THIS great educational work in ten volumes (which are now needed by "Music Play for Every Day" for very little children) covers the pupil from the very first minutes of study on to the highest reaches in the technique of the art.

THERE is no course like it in the whole artistic world. No volume or equal for it. More than this, it is one of the most important ways in existence of buying music for study purposes. It is the Encyclopedia of Music as it always kept up to date.

VIOLIN QUESTIONS ANSWERED

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Pressing Beginning Pieces.

M. H.—The three works you are mentioning for beginners, Wolfahrt's "Easier Beginner Method for the Violin," Op. 38, the "Keyer Studies," Op. 20, all contain admirable material for self-instruction. For a very first lesson you had better use the Wolfahrt work. When this is completed, you can follow it with either of the other two. Or, when the pupil is half or two-thirds through the Wolfahrt method, you can give him the earlier studies in Hornsby or Keyer, at the same time continuing with Wolfahrt.

I would advise you to call all three of these works as your pupils reach the point when they are ready to begin. You can get a separate book containing second violin accompaniments to the Hornsby or Keyer, played in this way the studies make pleasing violin music.

Self-Study Guide.

J. T. H. Jr.—As you are to study the violin at home without a teacher, probably the work, "Self Instruction for the Violin," by Albert G. Mitchell, will do as well as any thing.

Catch Up!

O. E. S.—Whether you have made good progress depends entirely on how you play the studies you name. I cannot tell without hearing. I am sure that if you are too late an age to begin the study of the violin, even if you expect to make it your profession. However, you have no time to lose, since pupils begin at six or seven months of age. You must make up for your delay, when you say you do, is simple.

Stretching FIBBS.

A. P.—By "stretching fifts," such as F on the A string, I presume you mean playing extensions from the first position. You do not state your age; so I am at a loss to know whether you are a child or an adult. If you are considering a change from three quarters to a half-size violin, your fingers and hand must be stretched. As I cannot possibly solve your problem without a personal examination, I would advise you to go to some good violin teacher and get his advice. As to the correct way to stretch, you must make the proper stretches because you do not hold your left arm far enough under the violin. Or possibly you hold your thumb too far back. If you are not sufficient for him, think on the neck of the violin and put your right which will throw your hand up above the fingerboard.

Obscure Walker.

F. S. R.—Sergey that it is impossible to obtain information about the maker of your violin. There are thousands of makers well known all over the world, who are quite unknown to fame.

The Selenite.

J. C. H.—The selenite notes you mention in this study are quite alike strokes are used, and the half note, the string is held in the middle between the notes. In playing selenite, the softer effects are produced mainly in the middle of the bow. For louder passages play nearer the frog. If you have reversed this bowing you will have to get some good violinist or violin teacher to show you how it is done, as it cannot be learned from a written description.

"Why Can't I Remember"

"Freda." Not knowing how far advanced you are in music, and how long you have played, I cannot tell just why you have so much difficulty in remembering. I judge by your letter, you want to know the different notes for which it is effective. At present I should say that you are probably trying to memorize pieces which are too hard for you. You can not, or the old French or Italian, or you can do these you can hardly play. Continue your memorizing first to the easy studies. When you know them, then gradually take on harder tasks. And remember this: of your practice time every day to memorize. Devote careful attention to it. Many at first find it hard to memorize, but they eventually learn their parts by rote with satisfaction.

The "Kick" in a Bow.

J. C. H.—A skillful violinist can become crooked by holding it out of a certain shape and manipulating the stick with his hands. When a bow has lost its true workmanlike shape, it will no longer hold the hair in the same position. It will not be the proper shape and holding it in the same position. It was produced when the bow was originally made. As you are barely likely to be the facilities and experience to do this, it will probably be your best course to do this the bow to a good bow-maker.

Three-Stringed Basses.

W. F. H. L.—Joseph Guarneri did not build the three-stringed bass. It is no doubt of the Italian makers made three-stringed basses with one or two strings. In the 18th century, the three-stringed bass was used. It was made by the Italian makers. It was made by the Italian makers. It was made by the Italian makers.

Whether Does Art Tend?

A. A.—Whether or not art tends toward the problem of the world, as your letter has shown, it has certainly solved many of the problems of the world, in so far as it has brought and sunshine into the hearts of succeeding generations and disposition of mind. It is not just how long the present era for art has been pretty close to the present era for art. It is not just how long the present era for art has been pretty close to the present era for art. It is not just how long the present era for art has been pretty close to the present era for art.

Hand-Made Violins.

R. D.—Just as to the adventures of the violin, it is a rule which forbids specifically recommending one violin over another. The exclusion of others. Write to some of the violin dealers in New York City. They will supply the necessary information. The violin makers of the world are not all the same. Some are better than others. Some are better than others. Some are better than others. Some are better than others. Some are better than others.

Bausch Violins.

J. C. G.—Laborious Bausch was a German violin maker who made violins at Leipzig, Germany. He was a son of C. A. Bausch, the famous bow-maker. He was a son of C. A. Bausch, the famous bow-maker. He was a son of C. A. Bausch, the famous bow-maker.

Time to Re-hair!

J. C. H.—If your bow has been well rubbed with hair, it will be in good condition. If it has not, it will be in poor condition. If it has not, it will be in poor condition. If it has not, it will be in poor condition. If it has not, it will be in poor condition. If it has not, it will be in poor condition.

Clear Harmonies.

J. W. A.—The notes are to be played on harmonics. The notes are to be played on harmonics. The notes are to be played on harmonics. The notes are to be played on harmonics. The notes are to be played on harmonics. The notes are to be played on harmonics.

Proportionate Necks.

W. E. H.—The American agent for the Street, Providence, Rhode Island. The price is \$15.00 a year. 2. As string instruments increase in size, they naturally become heavier. They naturally become heavier. They naturally become heavier. They naturally become heavier. They naturally become heavier.

Vinto!

M. M.—Vinto means brisk, lively, noisy. It is a word used in the music world. It is a word used in the music world. It is a word used in the music world. It is a word used in the music world. It is a word used in the music world.

Quicker Results!

Only a Buescher Gives You All These Features

Patented Resonance Pad—The greatest improvement for sounding of the saxophone. Found only on the Buescher.

BAND AND ORCHESTRA DEPARTMENT

(Continued from Page 367)

represented by a tympani roll which comes softly and gains in speed and intensity. After an almost imperceptible pause, a resounding thump or two would represent the drop into the basket.

Dramatic or descriptive situations must be dramatized; imagination is needed to do this effectively.

Bandmasters should attend contests, not merely to compare but also to learn from other bands which they may have an opportunity to hear.

MUSICAL HOME READING TABLE

(Continued from Page 351)

"He was outwardly a cold, stern man, with a face as rigid as stone. He almost utterly ignored audiences, and the more frantic the applause, the less likely he was to recognize it. It was only when he was disturbed by the idle chatter of people that he recognized anyone, and those recognized under such conditions were not likely to forget the manner of it."

"He was a man of strong passions, but in performance they were tempered by his dominant artistic nature. He could play with tremendous power, sometimes with such vehemence as threatened disaster to the work, and, on the other hand, his melody-playing was characterized by a delightful singing quality, for with all his energy, which sometimes appeared ferocious, he still had great beauty of tone."

"When it is considered that he played in concertos."

The Verdict of the Princess

Like many another composer, Saint-Saens had his difficulties in getting a start as an opera composer.

"The very success he had obtained as a composer of symphonic music went against him," observes his biographer, Arthur Hervas. "What could a writer of symphonies know about opera?"

It was his being an organist and a pianist made matters worse, particularly the last qualifications. "Bitez," he writes, "who played the piano admirably, never dared to play in public for fear of aggravating his situation."

"A fair prince of artistic tendencies having been asked to interest herself in Saint-Saens answered, 'What? Is he not a while'."

"He believed in the control of the intellect, in studying a composition, eliminating all emotion, all feeling, and just analyzing it and taking it apart until it is learned. And after it is thoroughly mastered, then, as he said, 'you can let go.'"

A Summer Course in

BAND CONDUCTING

Five Weeks: June 25-July 28, 1928

Given by the distinguished conductor and composer

VICTOR J. GRABEL

An eighty-hour course, treating every phase of the subject. Write for outline, mentioning this magazine.

THIRTY-THIRD ANNUAL

Summer Session

June 18 - August 11, 1928

Features:

Private Instruction

In all musical and dramatic subjects. Faculty of 150, including many artists of national and international renown. Low tuition rates.

Special Classes

Piano Master Class, conducted by Andie Shalish. Violin Master and Normal Class, conducted by P. Marinas Paulsen. Other classes in Piano Normal; Piano Teaching Repertoire; Harmony, Theory and Composition; Orchestra Conducting; Stage Department; Choral Conducting and Church Music; Singing and Ear-Training; Ensemble Playing; and Operatic Ensemble.

Theater Organ

An intensive eight-week course, given privately by Mildred Fitzpatrick, known as one of the most successful and highly paid theater organists in the country. The

training includes actual practice in film accompaniment. Four-manual movie organs, with a tremendous range of stops, are provided for practice purposes.

Eight Vacation Excursions

A boat ride on Lake Michigan.
A visit to the Field Museum of Natural History. (Lecture by curator.)
A visit to the Chicago

1. An automobile ride through Chicago's parks.
A visit to the Art Institute. (Lecture by curator.)
A visit to the Chicago

Theater.
A visit to the Tribune Tower.
A visit to the Chicago

Personally conducted by Mr. and Mrs. Leo Bodolsky, of the Faculty of the Sherwood Music School. Six-week residence in Paris, with provision for music study in the Paris Branch of the Sherwood Music School. History includes Paris, Cologne, Berlin, Amsterdam, Hague, Brussels, Pragues, Ghent, Ostend, and London. Moderate cost. Ask for illustrated European Tour booklet.

Living Accommodations
Available at moderate rates in Sherwood Dormitory or in private homes inspected and listed by School.

Teaching Positions

The Sherwood Music School now has thirty-four Chicago Neighborhood Branches, in which are taught four thousand junior piano and violin students. The School is able to provide teaching positions in these branches for advanced students and teachers of piano and violin, who contemplate extensive courses of study, but whose funds are not entirely sufficient for their plans. Applicants for these positions are given special courses of preliminary training, these varying in accordance with previous training and experience, if any. The Summer Session courses are designed particularly to meet the needs of those who desire to qualify for Neighborhood Branch teaching positions. The numerous additional teachers required for the 1928-29 teaching season will be engaged from those attending the 1928 Summer Session. Ask for details and application blank. (No obligation.)

—
SUMMER SESSION
AT CHICAGO MUSICAL COLLEGE

A Course in the Class Method of Teaching Piano to BEGINNERS

will be an important feature of the 1928 Summer Session of the Sherwood Music School. This course is offered for all who wish to prepare to teach piano (privately or in public schools) to beginning pupils, by the class method of recent years. An unusual advantage of the course is that it does not confine itself to one system, but includes the best features of all.

Master Discs (Continued from Page 366)

impressively projects the breadth of that majestic change at the finale. The set is well recorded. The interpretation throughout is good—satisfying in its brilliancy. A bit more legato might have been forthcoming, however, in some of those dance-like melodies.

Prelude and Fugue in C major (Bach) and *Prelude and Fugue in C minor*, played by Harold Samuel (Victor).
Samuel's playing of Bach has become internationally famous. It is rhythmically sensitive. These two familiar Preludes and Fugues will undoubtedly interest students as well as music-lovers.

Vocal Artistry

AUF FLUEGELN des Gesanges (Mendelssohn) and *Von Ewig Liebe* (Brahms), sung by Lott Lehmann (Odeon).

One of the greatest soprano voices of our day interprets these two songs beautifully. They are both love songs and very appealing.

Barber of Seville (Rossini). *La calypso and Nony of the Floa* (Moussorgsky), sung by Chailapin (Victor).

Chailapin's ingenious artistry is superbly projected in this disc. He is one of the few artists who never lose their personality on or off the stage. In the operatic aria a wit priest tells how a "breath of scandal" cleverly told will quickly develop into a scandalous story. In the song of that clever Russian composer, Moussorgsky, giving the story of a flea that becomes a courier, Chailapin deftly presents the humor of this composition.

Hymn to Apollo, Ancient Greek (about B. C. 278) and *Veni Creator Spiritus* (Hymn of Charlemagne), sung by the Palestine Choir.

Sicut Cervus and Popule Meus (Palestina), sung by Palestine Choir (Victor).
These two discs are culled from the educational catalogue, but their interest undoubtedly will be universal. The choir which calls itself after the famous 16th Century composer is unusually fine. The Hymn of Charlemagne, the Crusader, was originally written about the end of the 8th century. The present version is listed as having been used by Jeanne d'Arc in the 15th Century. The two Palestine chorales are exceptionally beautiful. These little discs have some fine examples of unaccompanied singing. The old Greek composition is also interesting. The numbers of these discs are 20896-20898.

Recommended to be Heard

THE FOLLOWING series of discs THE ETUDE recommends as worthy of a hearing, though, because of lack of space, they cannot be individually analyzed: *Manon, Le Reve and L'Elisir d'Amore*, *Una furtiva lagrima*, sung by Charles Hackett, *Mauroka in B minor* (Chopin) and *Campanella* (Scriabin), played by Ignaz Friedman; *Poloisina* (Chopin) and *Prelude, Opus 28, No. 15*, played by Ethel Leginska; *Little Minister Overture* (MacKenzie). New Queen's Hall Light Orchestra. (These are Columbia recordings.) Then there are the following: Haydn *Trio in G major*, played by Thihand, Casals and Cortot (a deliciously optimistic little work); "The 5th Symphony of Tchaikovsky," played by Chicago Symphony (a glorious work, ably described in accompanying circular); The Victor Herbert Album, selections from his works being commendably recorded; the Metropolitan Chorus discs—"Meistersinger," *Kirchener and Wach* out! sung by Berlin State Opera Chorus. (These are Victor recordings.)

Educational Study Notes

(Continued from Page 387)

On the syllable "all" in the word "allergy," place the tone high in your head; and open your throat (not your mouth) wide.

With Muted Strings, by August Neelck.
August Neelck is a leading German composer, concerning whom biographical data have recently been given in these columns. His beautiful waltzes in Berlin strikes us as being a real inspiration. The "muted strings" of the violin, the over. The sections of *Muted Strings* are of natural cells and are connected by carefully constructed "bridge passages." In the latter, freedom of tempo is allowable. By all means use *rubato* effects in this piece—be brief, brief, though. *Muted Strings* are always valuable by retarded ones, so that a measure is never lost. *Gratias* means gracefully.

Dark Eyes that Dream, by R. S. Stoughton.

The title for this song is by Daniel S. Two, who, whose poems have been set to music by many composers and distinguished composers in an excellent and alluring subject he deals with here. Dark eyes that dream, the eyes of a singer who feels and can express sentiment will enjoy this song. Mr. Stoughton's music is a perfect expression of the poem in typically fine. A very great many singers will want the letter "a" in "dream." He wanted ahead of time, and do not commit this error.

A common tendency will probably be to over- the *portamento* in this song. In other words, many vocalists will allow their voices to slide from note to note continuously throughout the song. Let it be said at once that *portamento* effects—like whiplash—cannot be used suitably to be enjoyed. (Other the opposite will do.)

Make a slight pause between the words "constant" and "fond."

Sonia, by Alfred Prince.
Sonia, by Alfred Prince, is a purely Russian name, but apparently it is based by the Russian.

The dance is of a polonaise type, in triple time and with characteristic themes. As fourth hand material it is particularly pleasing.

In construction is so regular that the players can, by themselves, easily make an analysis chart of it, as they see fit.

Adoration, by Felix Borowski.
The good and steady rhythm, the appeal of this melody by Felix Borowski have endeared it to us all. Mr. Borowski, a native of Poland, has fitted to it a most eloquent poetic text, based on Psalm 143.

Sing this song with utmost feeling, and with a steady rhythm, basing the tempo for the middle section in B minor.

A discolor of the great Alexander Gullman, he brings his work to the attention of the reviewer from the great Frenchman and adds to it the vigorous enthusiasm of the reviewer.

For some years Mr. Gullman has been the new leader of the New England Chapter of the American Guild of Organists. He has given nearly as many organ recitals as play at various churches in the intricate Samuel Baldwin of New York City, and has been chosen to play at various churches, including the recent Second Centennial Exposition in Philadelphia.

His compositions, which are very personal, are of a high quality, and his playing is of a high quality.

March Processional, by John Hermann Loud.

John Hermann Loud was born in Weymouth, Massachusetts, in 1874, and his career as an organist and composer is a brilliant one. A disciple of the great Alexander Gullman, he brings his work to the attention of the reviewer from the great Frenchman and adds to it the vigorous enthusiasm of the reviewer.

Phrases from a Piano's Diary
By ANNETTE M. LINGELBACH
(Continued from last month)
Interlude: Tea-Time

Last night I was telling the flute and the brown violin how wonderful it is to write a diary with both a prelude and a finale. The flute was so amused at the idea of a piano writing a diary that he asked me to read the prelude and I did. When I finished, he cried, "Fiasco! How terrible!" and curled up on his tiny yellow mouth.

At this last-note criticism, the brown violin murmured, "Oh, the prelude was nice. Happy Piano. It was very nice." And then the flute (the flute sings every day to the brown violin) said, "But I write better! Listen to my Tea-Time story," and he began to read:

At tea-time both the Andante Rabbit and the Allegro Mouse came out into the beautiful garden of Tone and sat down before the Blue Table of Rhythm. The Andante Rabbit would talk in perfect rhythm with softly accented measures while the Allegro Mouse said nothing at all, which was just as well, as he talked in such broken and uneven time that no one could understand him.

For the Andante Rabbit the dishes behaved wonderfully. The Waltz-Time Tea would taste mucous (grandly) because he drank it down slowly and carefully. The sugar in the blue glass bowl danced gracefully into his pink marcelo cup and the polonaise bread would graciously let itself be cut into slices of many queer shapes.

But with the Allegro Mouse the dishes were not friendly. The sugar fell out of the blue glass bowl in jumps and leaps, and the polonaise bread would not cut straight, and the Waltz-Time Tea went down the Allegro Mouse's throat like the sharp notes in a guitar. It was terrible—how rude the dishes were to the Allegro Mouse, and still, twice as wonderful, how friendly they were to the Andante Rabbit!

One day the Allegro Mouse decided to imitate the Andante Rabbit in his dainty eating. When Tea-Time came, he walked with measured tempo steps out to the garden and sat down with such perfect quietness that only his catkins flapped in the breeze. The dishes did not leap or jump as they usually did when he sat down at the little blue table. He picked up a minuscule cookie and ate it slowly—slowly—slowly. He poured Waltz-Time Tea into his cup and drank it down as the Andante Rabbit did. He cut the polonaise bread with a steady quarter-note beat that completely deceived it. Still silent. He talked to the Table of Beautiful Rhythm which answered him in dear-singing tones. He ate some sing-tones sugar. Still the dishes remained

(Continued on Next Page)

A Case of "Sneezles"
By H. M. CHAMBERS

Pansy had a bad cold and the doctor brought to her bedside a large, black, leather bag filled with a queer assortment of bottles—long, narrow ones, fat ones and red and blue colored ones—as well as boxes of pills and powders. But, since she simply had a "case of sneezles," she took only one small dose of medicine with a whole glass of orange juice to take out the taste. Then she leaned back on her pillow and watched the doctor fold up his bag and give instructions to Sallie, the nurse.

She had played with her dolls, Grace and May, until she was half asleep, so she tucked them comfortably in bed beside her, first seeing if their tongues were quite as pink as they ought to be.

Then she glanced toward her violin lying on the table, the bow slanting across the strings. The wind was blowing briskly over it. "I wonder if they're cold," Pansy whispered drowsily.

Then she opened her eyes and her ears widely, for straight from the violin came a low, lisp murmur. "Oh, brother Bow, did you hear that? Our mistress asks if we are cold?"

For answer only a sigh came from the bow.

"And to think," the violin went on, with a sort of whimper, "she complains of our

tone when you are raspy with dampness and I am so hoarse that I can scarcely speak—let alone sing!"
"I know it!" breathed the bow sadly. "Besides, she never unwinds me so that I can catch a wink of sleep. I haven't rested for days. I'm simply fagged out!"
"But just look at my bridge!" exclaimed the violin. "It positively makes me seasick to see it just on the verge of falling all the time. When it does fall I know it will hurt me dreadfully and maybe make me deaf for life by knocking over my sound-post. Then, where shall I be? I shouldn't be able to sing a single beautiful tone!"

There was silence for a minute. Then the violin continued more gently, "I do wish you'd not rest quite so heavily on my fingerboard, brother. My strings are lax enough now, goodness knows! There wouldn't be a tune left in them, if they get any lower."

"I don't like sprawling around any better than you!" exclaimed the bow pettishly. "But what are we to do? It's all our mistress' fault. We might attract her attention, though, if we tried hard enough." Just then a particularly strong gust of wind blew over the table and Pansy heard a low whistle coming from her violin. She listened again to make sure. It was, certainly, whistling for help.

"Oh, Sallie," Pansy called. "Please come and put my violin in its case. And unwind the bow. Yes, and be sure, please, to tuck my violin in, poor thing! At my very next lesson I'll ask teacher to straighten the bridge. Funny, I never thought about violins catching cold!"

Her Way
By MRS. RAY HUSTON

"My fingers, in playing, Step ever so high To get over the fences— It's easy as pie!"

"By stepping like that They become oh—so strong That finally they get Just scamper along!"

So Mary decided To try Thelma's way— The plan worked like magic— Just try it some day!

??? ASK ANOTHER ???

1. What is the seventh note of the F-sharp minor scale?
2. What is an accidental?
3. What is a illeotto?
4. What is a quintette?
5. If a scale has four flats, and the fourth note of that scale is the fifth note of another scale, what is the other scale?
6. When did Chopin die?
7. Who wrote the "Well-Tempered Clavier?"
8. Where are the semitones in a minor scale?
9. What note is written on the third ledger line below the bass staff?
10. What melody is this?

Answers on next page.

Franz Schubert 1797-1828
By MARION BENSON MATTHEWS
A treasury of sound he wrought, A myriad songs composed; Scarce one-and-thirty years on earth, And Schubert's life was closed.
"Man of a thousand melodies" Posterity acclaimed him; "Creator of the art-song" The world of music named him.

With tragedy his days were filled— With weal and toil, and grief; And he could crowd so much of worth Into a life so brief!

LETTER BOX
DEAR JUNE ETUDE:
I want to thank you for publishing my letter in the JUNIOR ETUDE. I am a Philpho: I have started my first piano lessons at the college. My father took me to a well-known piano teacher, and after three months he bought for me a lovely new piano. I had to go fifty-eight kilometers on the cars to take my lessons. Then, after six months, I became ill and had to have an operation for appendicitis; but, while I had to stop lessons and stay at home, I thought, "There's THE ETUDE to help me and to be my teacher." Last April we gave two concerts for the public, and my piano was used.
From your friend,
"PHILIPMA C. GEMUNO, Guimail, Iloilo, Philippine Islands."

JUNIOR ETUDE—Continued

Phrases from Piano's Diary

(Continued from Page 407)

friendly. He did not skip anything, but ate it in its proper place and time. It was wonderful—how the dishes behaved.

Suddenly the Andante Rabbit came racing down the path. He was in a great hurry. The Queen of Lento had invited him for a farewell visit to Andantino Palace, and he was nearly late for the train. He gulped down a cup of tea and ate some minuet-cookies in presto time, finishing them off with a piece of silver-soup cake.

The dishes behaved again. The Allegro Mouse had come to tea again.

One dish said, "Presto! Charge!" and hurled itself at the surprised Andante Rabbit. The next moment he was hurrying up the path with his coat-tails flying and his white-note cap on crooked.

Then the dishes became quiet. The Blue Danube Teapot pointed its nose peacefully at the Polka-Time Tine, and the sugar settled itself in its blue glass bowl. The Allegro Mouse yawned and smoothed out his gloves and wondered what time it was. Then the Blue Danube Teapot leaned over and touched his arm.

"It's tea-time again," he suggested, and suddenly the Allegro Mouse was all smiles again.

When the Tea-Time story was finished, the room was quiet as a harp. The flute looked first at the brown violin, and then at me. Then that brown violin (may she sing sweeter every day) murmured, "It was very nice! Very nice!" as she smiled to herself.

Schubert

By LEONORA SILL ASTHON

One there is, who singing tells of summer days;
Pictures joy and laughter in his sunny lays.

One there is whose music wakes the heart to tears,
With the gentle sequence of the passing years.

One there is who catches words upon the wing,
Jewels of the morning, light in everything.

He it is who tells us of glad love of life,
Gladsome waking hours and banishment of strife.

He it is who, ringing changes on the tone
Of our day's true music, tells of work well done.

Tells of love and laughter, tells of grief
And pain,
Tells of winter passing, sings of spring again.

All our joy and sadness unto thee belong—
Schubert, sweet musician! Master of true song!

*A dot is such a tiny thing
It's sometimes hard to see;
But if I miss it, I can't meet
Then such results—Dear Mel!*

Little Biographies for Club Meetings

No. 7—SCHUBERT

FRANZ PETER SCHUBERT was born in Vienna in 1797, and lived to be only thirty-one years old.

His name and melodious compositions are familiar to all juniors; and nearly everybody can play at least one or two of his compositions.

His father was a school teacher and the family were all very fond of music. Although they were too poor to have many of the things they wanted, they always considered music an absolute necessity in the home and did without other things in order to have it.

When Franz was a boy he sang soprano in the choir and played the violin in the choir school orchestra. He was particularly fond of the music of Mozart and Beethoven. When he was a little older he taught for a while in his father's school and played a great deal of his time writing and playing music. Finally composition became his object of his life. His music came to him easily and rapidly, and he had a marvelous gift for creating beautiful melodies. He wrote them down hurriedly and disliked going over them again for making corrections or changes. In this way he was quite the opposite of Beethoven who wrote and rewrote and revised his compositions until he got them just as he wanted them.

Schubert remained poor all his life and did not take care of his health, which was not helped by the fact that he was a very nervous man and he died in 1828. He seemed to write music because he could not help it and seemed not to be aware that his compositions were of any great merit. He was especially gifted in writing songs and wrote over six hundred and fifty of these, besides, of course, many compositions for chorus, orchestra, piano, strings and so on. In the year of 1815 he wrote over two hundred compositions. It is no wonder that he did not do much writing!

Some of his best-known compositions are the "Unfinished Symphony," and the

Theme from "Unfinished Symphony" First Three Waltzes, Op. 9

Monette in B minor Military March (solo or four-hand arrangement)

Resumend Air Theme from Symphony in C (arranged for four hands)

Serenade This year, 1928, is being celebrated as the centennial of Schubert's death; and many of his compositions are being given all over the world. The Junior Etude is therefore making this a special Schubert number.

A Talk About Schubert

By MARION BENSON MATTHEWS

"I have a new piece for my next lesson," announced Una, soon after her return from Miss Grey's studio.

Aunt Beth laid aside her book. "What is it, dear?" she asked.

"It is Schubert's *Menuetto in B Minor*," replied Una.

"I think that is a beautiful composition," said her aunt, "and I hope you will learn to play it well."

"I'll do my very best," promised Una.

"And Miss Grey wants me to be able to tell something interesting about Schubert, too. This year is the one hundredth anniversary of his death, she said. I looked in my encyclopedia, but I couldn't find a great deal about him—only a few bare facts."

"And what were those?" smiled Aunt Beth.

"Let me see—Franz Schubert was born in Vienna, Austria, in 1797, and died in 1828. He began composing when he was thirteen. His best-known works are the *Erli-king* and the 'Unfinished' Symphony. He is said to have written over a thousand compositions. Just think, Aunt Beth!" exclaimed Una. "He lived to be only thirty-one, and composed that number of pieces in such a short lifetime!"

"Yes," rejoined her aunt; "he has been called 'the man of a thousand melodies,' and I have read that it would be more nearly correct to say 'two thousand melodies.' Indeed, he composed so rapidly that he sometimes forgot just what he had done. There is a story that he brought some of his songs to a singer named Vogl. A few weeks later Vogl sang one of these songs in Schubert's presence. Schubert jumped up, exclaiming, 'Say, friend Vogl, that song is really very fine; who wrote it?'"

"Do you believe that?" asked Una incredulously.

"I think it quite likely," said Aunt Beth.

"It is not surprising, when you consider what an enormous amount of work he did that he had an occasional lapse of memory. His songs were different in form from most of those written during the eighteenth century. We call them lyrics."

"Why are they called art-songs?" inquired Una.

"An art-song is one in which the melody reflects the words and sentiments," replied her aunt. "Schubert tried to fit the melody to the thought expressed. If you will look up some of his songs you will see that this is so."

"I will, Aunt Beth," said Una; "and thank you for telling me something interesting about Schubert. I'm going to remember all so, I can tell it to Miss Grey next week."

"I will, Aunt Beth," said Una; "and thank you for telling me something interesting about Schubert. I'm going to remember all so, I can tell it to Miss Grey next week."

"I will, Aunt Beth," said Una; "and thank you for telling me something interesting about Schubert. I'm going to remember all so, I can tell it to Miss Grey next week."

"I will, Aunt Beth," said Una; "and thank you for telling me something interesting about Schubert. I'm going to remember all so, I can tell it to Miss Grey next week."

JUNIOR ETUDE—Continued

JUNIOR ETUDE CONTEST

THE JUNIOR ETUDE will award three pretty prizes each month for the best and most original stories or essays and answers to puzzles.

Subject for story or essay this month—*"School Credits for Music."* Must contain not over one hundred and fifty words. Any boy or girl under fifteen years of age may compete whether a subscriber or not.

All contributions must bear name, age and address of sender written plainly, and must be received at the JUNIOR ETUDE office, 1712 Chestnut St., Philadelphia, Pa., before the tenth of May. Names of prize winners and their contributions will be published in the issue for August.

Put your name and age on upper left hand corner of paper, and address on upper right hand corner of paper. If your contribution takes more than one piece of paper do this on each piece.

Do not use typewriters. Competitors who do not comply with ALL of the above conditions will not be considered.

Practicing Technic

(PRIZE WINNER)

Technic is a basis of all performances. Without a good, even, well-developed and highly efficient technic a piano player, of whatever grade or circumstance, is a badly handicapped and can scarcely equipped as a competent who goes out to work with a cross-cut saw and an axe.

Technic has always been a subject of importance, but in these progressive times a mastery of the subject is essential. One must play with technical perfection in order to bring out the message of a composition. Technic must become a vehicle upon which interpretation is made; technic is the means, but not the complete performance.

Pianists have to keep their fingers in good shape and well "oiled"; otherwise, the wheels of a machine, they will "rust" and become stiff. Technic is the greatest thing in music for hand position and for fingering.

HILLY N. SULLIVAN (Age 13), Illinois.

Practicing Technic

(PRIZE WINNER)

A pianist's greatest help is a fine technic. The pupils should be put through the regular technical work with great care; that is, all the two and five-finger exercises, scales, thirds, octaves, arpeggios, double notes, trills and so on. These should be supplemented by exercises, selected from many different sources, which are especially desirable for the pupil. Most of all, he must know the melodic, harmonic and contrapuntal value of the composition he is striving to play; otherwise he cannot give an intelligent, artistic and beautiful interpretation.

KATHERINE REED (Age 14), Kentucky.

A Delightful Very
First Piano Book with an
Unusual and Remarkable Individuality

MUSIC PLAY FOR EVERY DAY

"The Gateway to Piano Playing"

THE COMPOSITE WORK OF FAMOUS
MUSIC EDUCATIONAL EXPERTS WHO
HAVE A REAL APPRECIATION OF THE
THINGS THAT APPEAL TO CHILDREN

IDEAL FOR SPECIAL SUMMER CLASSES OF JUVENILE BEGINNERS

Thousands of Dollars have been invested in Creative, Editorial Art and Mechanical Details to Perfect This Extraordinary Book Designed to Furnish Teachers an Aid that Insures Inspiring Results with Beginners

Before a single page was permitted to go on press, active and progressive teachers with records of success as teachers of young beginners were invited to go over every detail of the book and make criticisms and suggestions. Their enthusiasm and promptness in the great reception and endorsing use teachers everywhere will give "Music Play for Every Day."

SOME OUTSTANDING FEATURES ARE—

Fascinating Little Gems for Juvenile Pianists
written by Helen L. Cramm.

The Division of the Book into Twenty "Play-
times" that Progress Just Right.

Its Clear, Workable and Practical Presentation of a Solid Foundation in
Music Study in the Most Pleasing Kind of a Manner.

A Section of Twelve Classics from the Great Masters Made Easy. Can be
Used by Any Intelligent Teacher without Any Special Course of Preparation
to Understand Its Practical Use.

"Cut-Out" Pictures Printed on Pages in the Back of the Book Ready for the
Little Adventurer in Music to cut out and paste in the "Playtime" to which it
Belongs.

The Wealth of Features to Gratify the Child Love of the Imaginative Start
with the Cover Decoration in Colors and the Full-Page, Richly Colored Frontis-
piece and Continuing without "let-down" to the Very Last Page of the
Book.

"MUSIC PLAY FOR EVERY DAY" IS A COMPLETE FIRST INSTRUCTOR IN ITSELF AND MAY
BE USED AS AN ADMIRABLE INTRODUCTION TO ANY SYSTEM OF PIANOFORTE EDUCATION.

PUBLISHED COMPLETE IN
One Volume. Price \$1.25
For use in individual instruction.

PUBLISHED IN FOUR
BOOKS. Price, 40 cents ea.
For use in class instruction.
Teacher's Guide, Price 25 cents.

PUBLISHED IN TWENTY
PLAYTIMES. Price 25c each.
Suitable for use in private or
class instruction.

JUST OVERFLOWS WITH CAPTIVATING ILLUSTRATIONS

Months were devoted by F. Sherman Cooke working in close co-operation with the musical editorial staff in producing illustrations of unusual character and with special appropriateness for the musical and story-like contents of the book.

As Publishers We Offer Any Established Teacher or Prospective
Teacher the Privilege of Examining this Excellent Book

It also will be found on display in the stores of all leading Music Dealers

THE TEACHER'S SUMMER AIDS

THE PROFITABLE USE OF SUMMER MONTHS MEANS MUCH TO THE TEACHER'S SUCCESS. SUMMER CLASSES CREATE NEW INTEREST, AND SELF-STUDY, OR "BRUSHING UP" NEGLECTED TECHNIC IS MOST VALUABLE

Special Summer Piano Classes for Young Beginners

Make Your Class-Times "Play-Times" for the Children by Using This Remarkable New and Easiest of All Piano Instructors—

MUSIC PLAY FOR EVERY DAY

Complete, Price \$1.25 In Four Books, Price, 40 cents each
Published in Twenty-Playtimes (for class use), Price, 35 cents each

A "brand new" book for piano beginners that engages the interest of children just like a delightful little toy's story and picture book. It is the composite work of warm-hearted educators who have spent years in finding out the ways in which children can be led to an eagerness for beneficial knowledge and musical performing ability. "Music Play for Every Day" is just filled with charming and captivating pages that give much in fascinating pictures, pretty little melodies, storylike explanations and a natural step-by-step procedure that never lets a new step appear like a problem.

Classes of Boys and Girls Who Feel Considerably the Seniors of Kindergarten and Primary Tots Progress Finely with—

FIRST YEAR AT THE PIANO

By JOHN M. WILLIAMS

Complete in One Book, Price \$1.00 In Four Parts for Class Use, Each 35c

Few progressive teachers are not somewhat acquainted with the practical and successful teaching ideas of John M. Williams. Many agree that the "First Year at the Piano" is one of his finest educational works. Tremendously successful as published originally complete, popular demand for it in parts for convenience in its use as a class instructor caused its recent publication in four parts. It is a commonsense work throughout and aids the teacher to achieve excellent results.

A Text-Book that Lays a Most Substantial Foundation for Real Musicianship by Making the First Steps in Harmony Easy to Grasp

Harmony Book for Beginners

By PRESTON WARE OREM

"Harmony Book for Beginners" is brief, simple, vital, practical, and distinctive. It is an excellent text book for class or private instruction, as well as an admirable book for self-help. It gives the main essentials of the subject in such simple, understandable and interesting manner that it will prove invaluable in first Harmony instruction or as a self-tutor. This work is not a rehash of the old "cut and dried" harmonies, but a fresh, new, sound treatment along modern lines.

Price, \$1.25

For Further Study Theory and Composition of Music

By PRESTON WARE OREM

May be taken up by anyone having an elementary knowledge of harmony. It teaches melody making, harmonizing melodies, how to write an accompaniment, modulation, modern harmony, and musical forms.

Price, \$1.25

TECHNICAL MATERIAL FOR ADVANCED STUDENTS AND THE TEACHER'S PERSONAL USE IN REBUILDING TECHNICAL ART

Complete School of Exercises for Developing Accuracy in Piano Playing

By ISIDOR PHILIP

A compendium of modern technic by a contemporary teacher, exhaustive in its details and including all forms of finger exercises, scales, chords, arpeggios, double notes, octaves etc. The exercises are carried out in full through all keys and in various rhythms.

Price, \$2.00

Hand Culture A System of Double-Note Finger Training

By ANNA BUSCH FLINT

The mechanism of the modern piano requires great strength in each individual finger to produce and hold a tone. Build up the muscular strength of the weak fingers and the mastery of all technical difficulties is accomplished. The ideas in this work are based on physiological laws.

Price, \$1.00

Concentrated Technic Exercises for Developing Accuracy in Piano Playing

By GUSTAV L. BECKER

Contains numerous exercises of a thoroughly practical character, which are sure to have a most beneficial effect upon the technique of the student. This work may be used by students anywhere from the third to the seventh grade.

Price, 75 cents

Young Folks' Picture History of Music

By JAMES FRANCIS COOKE

The author begins with the old Greek fable regarding the origin of music and soon leads to the facts relating to the growth of musical art in such an engaging manner that the young reader is fascinated with musical lore. Then, in due course, little biographical outlines and anecdotes are given of the old masters. More important modern masters are briefly introduced, thus acquainting the young musician with practically all of the great composers.

Throughout the printed pages of the book there are numbered spaces and it is play for the juvenile to cut out of picture sheets provided, the one hundred and some odd pictures and paste them in the proper spaces in the book. These attractive illustrations arouse an interest in the things and individuals and instruments mentioned, and while they apparently provide play with scissors and paste, they are leading the child to a wealth of information on things musical.

A natural play-like process of evolving tunes is given, a feature that never fails to interest.

Price, \$1.00

Form a Special Summer Music History Class or Study Club Using as a Guide

THE STANDARD HISTORY OF MUSIC By James Francis Cooke

PROFUSELY ILLUSTRATED—ENGAGINGLY WRITTEN—UP-TO-DATE—THE MOST POPULAR MUSICAL HISTORY—CLOTH BOUND
Price, \$1.50

The matter of a summer music history class need not be approached timidly by the teacher. Every respectable member of the community may be invited to join. Not one, but a number of classes or music history clubs may be started and the nominal fee to each member for each meeting brings the teacher a comfortable and profitable summer revenue. Classes for school children, afternoon classes for the ladies, and evening classes for those who cannot conveniently devote daylight hours are possible if proper publicity, initiative and intelligence are combined in the teacher's activities. If the community is small, a family affair, with all ages represented, can be made interesting and profitable to all. Thousands of teachers know "The Standard History of Music" and how admirably it answers for a text-book. Those who do not know it need only to examine a copy to have their enthusiasm aroused over the possibilities of using it to stir up a real musical interest in their communities.

Every pupil regularly taking private piano instruction should be invited to join a special pupil's summer music history class. It tends to hold interest and develop greater musical appreciation.

The more folk the teacher interests in musical history either through class, private or self study, the more readily will future pupils for piano or other musical study be secured.

POLISHED BRASS CANDLESTICKS

BLUEBIRD CLOTHES LINE REEL

STANDARD CASH BOX

A handsomely designed steel box, subdivided for coins, bills and checks, furnished with lock and two keys; finished in rich dull black enamel, size 5 1/2 x 2 1/2 inches. ONLY TWO NEW SUBSCRIPTIONS.

The world's great music is on Victor Red Seal Records

Scheherazade

The rich, mysterious music of the East...

SCHIEHERAZADE speaks. . . . It is a tale of marvels, to beguile her lord. She tells of Sinbad and the magic isles . . . horses with brazen feet, and men of steel . . . sultans and princesses, *houris* and turbaned slaves. Color, warmth, rhythm, the very perfumes of the Orient breathe in her artful words.

From that ancient collection of tales known as the *Arabian Nights*, Rimsky-Korsakoff drew inspiration for some of the most vivid and exotic music ever written. His *Scheherazade Suite* is a marvelous arabesque of orchestral color, brilliantly imaginative, technically fine. Three generations of music-lovers have delighted in it. It should be in every musical library.

The *Scheherazade Suite* has been recorded by Leopold Stokowski and the Philadelphia Symphony Orchestra. It is available in a special album, with an explanatory booklet. In it, Victor's Orthophonic process has preserved both the full splendor of the music itself and the subtlety and vigor of its interpretation.

The nearest Victor dealer will gladly play you the *Scheherazade Suite*, or any of the beautiful new Victor recordings, by the foremost artists and orchestras. . . . Write today for the free illustrated booklet, "*A Musical Galaxy*," with foreword by Leopold Stokowski—a commentary upon six of the greatest moments in music.
