DILEMMA IN DETROIT (See Page 9)

Exciting Educational Works By MARY BACON MASON *Outstanding Music Educator*

CLASSICS IN KEY-KOLOR

For the Piano

430-40092 \$1.00

A way of writing in which each note is the color of its corresponding piano key: black if played on black key, white if on white key. With this slight change you can read music in any key without first mastering scales and signatures! Pedal signs are used and necessary small changes have been made in existing notation. 24 selections. For the rusty reader, for adults or for grades 3 to 5.

FOLKSONGS and FAMOUS PICTURES

430-40094 \$1.25

A practical introduction to the keyboard based on folk tunes of many lands. First work in harmony, ear-training, memorizing, etc. Imaginative titles, 75 pictures including reproductions of composers' portraits, musical art subjects, etc. 35 paste-ins, color charts, and 48 cut-out cards. Oblong form. Age group, 7-11.

FIRST CLASSICS and FOUNDATION HARMONY

430-40093 \$1.25

A second year book to follow "Folk Songs and Famous Pictures." Selections from Bach, Mozart, Schubert, Grieg and many others. Simply arranged, set to interesting verses. Cut-outs, color charts, instructive games. Oblong form.

FAVORITE PIECES AND SONGS

430-41005 \$1.00

Adapted for use in classes or with individual pupils. Designed to follow "Folk Songs and Famous Pictures." Aimed to foster a real love of music, widen the range of reading, build rhythmic sense, give strength and control to fingers, and increase practical knowledge of keys, scales, and harmony by consecutive study in one key at a time. The first 32 pages constitute minimum requirements; the remainder consists of supplementary pieces, studies, and duets for recreation, recital, or reading. Grade 2 to 2½.

MARY BACON MASON FLASH CARDS

430-40018 \$1.25

For notation drill, an envelope containing 30 cards, 60 faces. Especially designed for class use, they illustrate 36 notes on the Grand Staff, key signature, time signature, rhythms, rests, repeats, accidentals and expression marks. Size 6¼ x 10 inches.

THE ADULT APPROACH to the PIANO

430-40087 \$1.00

While designed as a first instruction book for the teacher to use in giving piano lessons to students of high school, college age or older, many reports prove it of value to self-help students. Sight-reading, a most desirable accomplishment for those of mature age taking up piano study, is stressed from the very beginning. Memorizing also is encouraged. The total absence of childish titles and musical themes has inspired its use by some teachers with students in the teen ages.

AUTUMN AIRS and SONGS of SPRING

430-40189 \$.75

Based on folksongs, traditional melodies, favorite airs, and compositions of the masters, the recreation pieces in this collection are about grade 2 in difficulty. Verses for singing. Illustrated with line drawings which may be colored by the pupil. Oblong form.

CHRISTMAS CAROLS

Made Easy to Play and Sing

430-40038 \$.75

A gift book that any child will appreciate. Here are all of the most-beloved Christmas carols in arrangements piano beginners can play, thoroughly fingered and carefully phrased. Complete texts are given, one or two of the verses being printed between the staves. Adjoining each carol is a space for pasting a Christmas card so that, when completed, the book becomes a treasured souvenir.

BOY MUSIC

A First Piano Method For Boys between 8 and 16

430-40089 \$.75

In this book everything—music, titles, texts and illustrations—is designed to interest the boy. He is encouraged to memorize, transpose; yes, to "play by ear." Exercises are termed "Stunts," practice is a "game." All camouflage, however; there are 73 songs and pieces, 40 technical exercises, 30 chord exercises, 8 scale exercises, 9 rhythm drills, 8 notation studies, 10 transposition studies, etc. in the book. Oblong form.

MARCHING MUSIC

430-40054 \$.75

28 selections from a variety of sources: American cowboy ballad, dignified music of great masters, national anthems and operatic airs. All arranged in march time with texts for enjoyable singing. Attractive illustrations. Grade 2.

Prices subject to change without notice.

ETUDE—APRIL 1951

LETTERS

Music Section

Sir: Many of us would appreciate larger notes in the music section.

Mrs. Laura Kochenderfer
Downers Grove, Ill.

Sir: ... the notes are blurry, almost as hard to read as shaped notes.

Mrs. Harvey Edwards
Crystal River, Florida

Sir: We've always been rooters for the ETUDE, but the music this year is so hard to read my pupils and I are about discouraged with it. Why is the music so hard to read? It's not a pleasure any more except for the articles.

C. Ellsasser
Conneaut, Ohio

Sir: I have been a subscriber for over 40 years. I still enjoy the articles, but do not like the printing of the music in the recent numbers. It is too small and indistinct.

Mrs. Martha F. Gale
Concord, N. H.

• Beginning with this issue, ETUDE hopes readers will find the printing of the music section improved. ED.

"Albert Schweitzer Was My Teacher"

Sir: I read your article on Dr. Albert Schweitzer with interest. Will you please send me Dr. Schweitzer's address? I wish to make a small gift to his work as a memorial to a dear relative whom we have lately lost.

Mabel S. Harrington
Hazleton, Indiana

• ETUDE is forwarding Mrs. Harrington's letter to Dr. Schweitzer. ED.

ETUDE Articles

Sir: I like your new trend of chatty comments on writers past and present. Maybe ETUDE has always been thus and I have been unobserving. Anyhow these are things I like.

Martha B. Snow
Boonville, N. Y.

Sir: Please accept my sincerest congratulations for your excellent articles, especially that on "Notation" (December). It answers a great need. And its clarity and interest are unique.

Brother Boniface, F. S. C.
Napa, California

Sir: The ETUDE looks as if you were going out of business... Mrs. Edward H. Sherman
Greenwich, N. Y.

Sir: I have been a musician and teacher of music all my life, and began taking the ETUDE in 1907. Through the years I have seen the standard lowered, the many repetitions of musical selections and other changes I do not like, but today when I received my copy of the new number, my disappointment was too great to hold. I am not a fanatic or a complainer, but what has happened to the ETUDE?

Mrs. W. H. Walton
Dwight, Kansas

"It's All Done with Muscles"

Sir: For several years I have been a subscriber and cover-to-cover reader of ETUDE. I always read everything about piano playing, and have found the articles and piano departments helpful and inspiring.

However, this month I was much surprised by the ending of Andor Foldes' "It's All Done with Muscles" (ETUDE, February 1951), which quotes directions as to the playing of the opening movement of Beethoven's "Moonlight" Sonata: "... e senza sordino," meaning "without pedal." I may be wrong, but my musical dictionary defines "senza sordino" as without dampers, hence with pedal.

How difficult is it for an amateur in both music and writing to achieve publication in the ETUDE?

Mrs. A. H. Gray
Coronado, California

• (1) Mrs. Gray is quite right and ETUDE was wrong. (2) Manuscripts from new writers are welcomed, and read with great interest. ED.

"Adventures of a Piano Teacher"

Sir: Why go on enjoying something and never make it known to the author? As I read the February ETUDE I am filled with laughter at the funny side of a serious part of Dr. Maier's life...

Edith L. Lovett
Long Beach, California

It's new,
it's a Wurlitzer,
you can play it!

New Wurlitzer home organ
with 1000 different tonal effects

So easy to play you can
teach yourself from this book...

Music of the masters, or music of the moment—play either, play both on this new Wurlitzer Organ. Even if you've never played an organ before, you'll find this one easy to "get on to." A new book shows you how to start right off with simple tunes. Your Wurlitzer Dealer has it now.

Solo voices...

blended harmonies...

majestic full organ...

Let your hands wander over the keys—and listen! There's the voice of the clarinet, the fife, the French horn, the piccolo. Now you hear the harmony of diapason and strings—a multitude of tonal colors that puts new fun in playing and new joy in music.

Built in the tradition of the

"Mighty Wurlitzer," this new Wurlitzer Organ is complete—a musical instrument the whole family can enjoy. Two full 61-note keyboards for your fingers. A 25-note pedal keyboard for your feet. And fully equipped, ready to plug in and play, it's the lowest-priced standard two-manual organ you can buy.

Musical Oddities

By NICOLAS SLONIMSKY

AN ITALIAN MUSICIAN, Carafa de Colobrano, who lived in Paris, asked Rossini to help him in his straitened financial circumstances. "I have no money to give you," said Rossini, "but here is an unpublished manuscript. Take it to a publisher, and he will give you 1000 francs." It was Rossini's fantasy of Meyerbeer's music, subtitled "Sweet Memories of L'Africaine". The publisher was delighted to have the piece, particularly since Rossini's dislike of Meyerbeer was notorious, and he gladly paid Carafa the sum of 1000 francs for it. But upon examination, Rossini's "sweet memories" of Meyerbeer's opera proved to be definitely sour. The music was full of deliberately contrived dissonances and noisy tremolos. Needless to say, the manuscript was never published.

A young pianist was making his debut. As he sat at the piano, he noticed that the piano bench was too far from the keyboard. He seemed perplexed as to what to do. After a moment's hesitation, he pulled the piano with all his might towards the bench. His effort was rewarded by a storm of applause. Encouraged by this sign of approval, he played at his best. The critics, too, were put in a pleasant mood, and the reviews were excellent.

CAMILLE BELLAIGUE, the French music critic, who was in the same class with Debussy at the Paris Conservatory, reports that Debussy had the habit of breathing violently on the first beat of every measure when he played the piano, and that his schoolmates constantly teased him about it. When Bellaigue reviewed Debussy's opera, "Pelléas et Mélisande" in "Revue des Deux

Mondes," he commented sarcastically that Debussy was well cured of accenting the first beat, and that now in his music "all beats are weak beats." Bellaigue swung out violently at his former friend and co-disciple. "It is not the least original trait of M. Debussy," he wrote, "that he can compose a complete opera without a single phrase, without a single bar of melody. There are no leitmotifs in Pelléas et Mélisande, for the simple reason that there are no motifs of any kind. Rhythm seems no less hateful to M. Debussy. In his opinion, rhythm is, like melody, an obsolete formula, an old encumbrance from which music must be freed. In his doubly amorphous art, the abolition of rhythm goes hand in hand with the suppression of melody. . . . The orchestra of M. Debussy seems marked with smallpox. It is thin and emaciated. When it pretends to caress, it scratches and hurts. It makes little noise, I admit, but the little noise it makes is pernicious. (Il fait peu de bruit, je l'accorde, mais un vilain petit bruit)." Thus spoke a French music critic of one of the greatest French operas!

Of time and music: An eminent piano teacher played two pianos with one of his pupils. "You are a whole beat behind, my dear boy," said the teacher. "Out of respect for you," replied the pupil reverently . . . Franck's Violin Sonata was played at a concert. As the last movement began, with its famous canonic imitation, a lady in the audience remarked to her neighbor: "They are fine musicians, but it's too bad that they did not rehearse enough together." . . . A member of a string quartet asked Leopold Godowsky after

a concert: "How did you like the tempo?" "Fine," replied Godowsky, "particularly yours!" . . . A local pianist played an operatic selection at a party. "Do you know what it is out of?" one guest asked another. "Out of time," replied the other.

In a letter to an American admirer, written around 1900, George Bernard Shaw made some pert observations about heredity. Some of the theories about the heredity of acquired characteristics reminded him of the remark of an old woman whose daughter played the piano. "Your daughter plays well," a woman said to her. "Yes," the old woman replied, "she does have a fine touch, and it's no wonder, for she loves the piano, and never tires of it. Ye see, she's a great taste for music; but, then, that's only natural, for her grandfather had his skull fractured with a cornet at a picnic."

When a sports writer is sent out to review a concert, anything can happen. A newspaper in Quincy, Illinois, carried this account of a recital by the famous violinist, Eduard Remenyi, in October 1893: "When it gets right down to a question of what's what, this man Remenyi can outfiddle any man in Adams County, barring no man. He fiddled up one side and down the other—hippy-hop, skip and a jump. He can take a violin and hold it as a huffed man would a catfish, and he would make it sound like the celestial choir singing as if their hearts would break. Maestro Remenyi trains at 136 pounds and his head is as bald as an onion and as yellow as ginger."

IN AN OLD ISSUE of The Boston Musical Herald, a magazine long extinct, we find this quaint description of the fugue:

A fugue is a form in which the right hand says to the left: If fugue get there before I do, Tell them I'm a-coming too.

Playfulness and profundity are combined in a perfect blend in the most popular fugues of Bach, such as the C Minor

Fugue of the first book in the Well-Tempered Clavichord (Ex. 1, 2 and 3). It has elements that can be played in polka rhythms. So much for the frivolity; profundity comes in this fugue in its expert triple counterpoint which is elaborated so that the harmony sounds pleasurable and natural even to untutored ears. The tonal answer, which is the relic of an old tra-

dition, here does not wrench the melodic line as it does in the C-sharp Major Fugue, for instance (Ex. 4 and 5). Many a musical lad and lass might think that the answer to the subject of that C-sharp Major Fugue is "wrong." The intervallic progression of the subject itself seems strange, with its emphasis on the major seventh; and it sounds even stranger in its tonal answer.

Incidentally, here is a recipe for writing a tonal answer: Transpose the subject a fifth up, thus forming the real answer; then change the first supertonic in the real answer to the tonic, without altering any of the other notes. This will satisfy the tradition that required a reciprocal response, so that the dominant answers the tonic, and the tonic answers the dominant. For instance, the real answer to the subject of the C Minor Fugue would be an exact transposition into the key of G Minor. By changing the supertonic of the original key, to the tonic of the original key, we obtain a tonal answer, which retains the feeling of the basic tonality.

NEW

By **GEORGE GASCOYNE**

Prades Festival

A musical event of international importance was the festival at Prades, in southern France, which took place under the direction of Pablo Casals last June. Columbia Records, which acquired exclusive recording rights for the festival, has now released the results of its efforts on ten LP discs. The all-Bach programs of the festival include all the "Brandenburg" Concertos, suites, sonatas, both solo and accompanied, and other works.

A roster of distinguished musicians took part in the Prades Festival. They included Rudolf Serkin, Mieczyslaw Horszowsky, Joseph Szigeti, Alexander Schneider, Isaac Stern, Eugene Istomin, Clara Haskil, Marcel Tabuteau, John Wummer, Leopold Mannes and Yvonne Lefebure.

Most striking of all is the playing of Casals himself in three sonatas for cello, with Paul Baumgartner at the piano. Once again the great master demonstrates that he is outstanding among living musicians.

The Prades Festival records are of rare historic and musical interest, and cannot be recommended too highly.

Beethoven: "Fidelio"

Beethoven's great if somewhat uneven opera is seldom heard in the opera houses of this country. Therefore Beethoven lovers will take pleasure in the announcement that the entire work is available on an imported recording. Most of the singers, who have not been heard in this country, are excellent. Margarete Baeumer sings the title role, and Hans Sauerbaum the tenor role of Florestan. The well-paced performance is conducted by Gerhard Pflueger, and the orchestra and chorus are those of the Leipzig Radio.

Bowles: Two-Piano Concerto

Paul Bowles wrote this work for the two-piano team of Gold and Fildale, who perform it on the record. The work is scored for two pianos, winds and percussions. It is an odd, intriguing work, played with gusto by Messrs. Gold and Fildale. On the other side is Milhaud's "Carnival at New Orleans," also written for the piano duo. Daniel Saidenberg conducts the performance. (Columbia, one LP disc).

Bach: Christmas Oratorio

The vast musical panorama of Bach's "Christmas Oratorio" is offered in an uncut version by Renaissance Records (4 LP discs). The work was designed by Bach to be performed on six separate days of the Christmas festival, and is a little overpowering when heard at a single sitting. Each section, however, contains magnificent music that will reward many re-hearings. The performance was recorded in Europe by the Stuttgart Choral Society and the Swabian Symphony.

Handel: Sonatas

Sonatas of Handel for flute, oboe and continuo are played on a new Allegro LP disc by Philip Kaplan, Lois Schaefer, Samuel Mayes, John Holmes and Erwin Bodky. The music is charming, and the performance is expert.

Strauss: "Der Rosenkavalier"

Selections from Act II of "Der Rosenkavalier" are offered on a Columbia LP disc. Music included is the "presentation of the rose" scene and the finale of Act II. Elizabeth Schwartzkopf, as Sophie, and Irmgaard Seefried, as Octavian, sing expressively, and Ludwig Weber is sonorous and effective as Baron Ochs. Otto Ackermann conducts the Vienna Philharmonic.

Music Lover's

BOOKSHELF

By **THOMAS FAULKNER**

The Romance of the Mendelssohns

By **Jacques Petitpierre**

Translated by **G. Michelot-Cote**

Even in England, the center of what George Bernard Shaw called "Mendelssohn-worship" in the 19th century, there has to date been a dearth of Mendelssohn biography. Readers who know all about Clara Wieck Schumann and Cosima von Bülow Wagner might be pardoned a moment of uncertainty about Cécile Jeanrenaud, who later became the wife of Felix Mendelssohn-Bartholdy.

Mendelssohn's bride came of a family of French origin who moved to Frankfurt, Germany, early in the 19th century. She met the composer when he came to Frankfurt in 1836 to conduct the St. Cecilia Society in place of its regular conductor, who was ill. The two young people were married the following year, and set off on a honeymoon journey down the Rhine. Both were gifted artists, and their pen-drawings and watercolors from the journey are reproduced in Mr. Petitpierre's volume. Then they returned to Leipzig, which Mendelssohn's Gewandhaus concerts had made one of the most famous music centers in Europe.

Besides being excellent biography, Mr. Petitpierre's volume offers a quaint and charming picture of life among well-to-do German music lovers of the early 19th century.

Roy Publishers, \$3.50

Wagner: Robert Bagar

Tchaikovsky: **Louis Biancolli**

Schubert: **Herbert F. Peyser**

Bach: **Herbert F. Peyser**

The New York Philharmonic-Symphony, for years a Sunday afternoon radio fixture, has decided to bring to its radio audience the same sort of programmatic information available to concert-goers on its Carnegie Hall programs. These small, inexpensive volumes are the result. Each contains a brief biography of the composer and

notes on his most frequently played works. Though unpretentious, the little books offer a good deal of valuable information.

Grosset & Dunlap, 50 cents each

Handbook of J. S. Bach's Cantatas

By **Werner Neumann**

A systematic catalogue of Bach's 217 church cantatas, listing contents of each work, instrumentation, solo voices required and range of each solo. The work appears in the original German, and it is likely to be of interest mainly to advanced scholars. Associated Music Publishers, New York; Breitkopf & Härtel, Leipzig, \$3.50.

Paganini, Master of Strings

By **Opal Wheeler**

Addressed to younger readers, this book presents in fictionalized form an account of the life and doings of the fabulous Niccolò Paganini. The story begins with Paganini's tempestuous boyhood in Genoa, and follows him to his eventual triumph as a world-famous virtuoso. An appendix introduces two melodies from Paganini's First Violin Concerto.

E. P. Dutton, \$3.75

A Dictionary of Vocal Themes

By **Harold Barlow**

and **Sam Morgenstern**

It is an uncomfortable experience to have a tune which one cannot identify running through one's head. Harold Bauer was driven almost frantic, he tells us in his autobiography, by a fragment which turned out to be from von Suppé's "Beautiful Galathea" Overture. Many other musicians have experienced the same difficulty.

To relieve these sufferers, and incidentally to provide a unique and worthwhile reference book, Messrs. Barlow and Morgen-

CURZON uses the Steinway exclusively, as does virtually every famous artist of today: Gorodnitzki, Lateiner, Menuhin, Mildner, Morley & Gearhart, Stokowski, Templeton, Kraus, and many more.

Who buys

the Steinway?

Hopplewhite in mahogany

Not income—but the satisfaction of owning a fine piano is the basis for choosing the Steinway. This piano's golden tone and matchless performance attract persons from every walk of life. If you can afford a piano, you cannot afford anything less than a Steinway!

You will find—as all Steinway owners do—that though the initial cost of this piano may be higher, the benefits are so great as to make it the most economical of pianos. Mastery becomes easier. A keener sense of tone is developed. Moreover, so skillfully is the Steinway made that, with proper care, it will serve your grandchildren as magnificently as it serves your children. Consider, too, these significant factors:

- Only the Steinway has the patented Accelerated Action, so essential in developing sensitive touch.
- Only the Steinway has the patented Diaphragmatic Soundboard, which permits big piano tone in even the smallest Vertical.
- Only the Steinway is used by nearly all of the nation's leading musicians, orchestras, conservatories, radio and television stations.

What wiser investment can you make in your family's happiness? For information on prices and convenient terms, consult your local Steinway dealer. You will find his name and address listed in your classified telephone directory.

MUSIC LOVER'S BOOKSHELF

(Continued from Page 7)

stern have catalogued some 3,000 vocal themes of all sorts. Works found here range from "I Hear You Calling Me" to Rodolfo's Narrative in "La Boheme." Composers span many centuries, beginning with Richard The Lion-Hearted (1157-1199), who is represented by his "Ja nun hons pris," and ending with such contemporaries as Hindemith and William Walton.

A unique and useful feature of the book is its notation index. If one can remember a tune but not its title, one simply transposes the tune to C Major, looks in the back of the book and locates title and composer instantly.

Altogether the book is a useful companion-piece to the dictionary of instrumental music which the same authors compiled four years ago.

Historical Anthology of Music
Edited by Archibald T. Davison
and Willi Apel

This is the second and final volume of the "Historical Anthology" prepared by Dr. Davison and Dr. Apel, and continues the survey from the early 17th century to the end of the 18th.

The editors' aim is to present music which is not easily accessible elsewhere. Thus the present volume includes only a single work of J. S. Bach, and none of Handel; but there is a rich variety of compositions by their obscure contemporaries and predecessors—Giovanni Maria Trabaci, Johann Hermann Schein, Manuel Rodrigues Coelho, Henry Lawes, Andreas Hammerschmidt and others.

The result is an absorbing survey of music written before the 19th-century Romantic period. A source of perplexity in regard to Mozart, Haydn, Beethoven, Schubert and Schumann

is the fact that we have forgotten the music they knew when they were boys. The new anthology is a valuable reminder. There is, for example, a clear anticipation of Leporello's "Catalogue" Aria from "Don Giovanni," in "Bald die Blonde, Bald die Braune," from a forgotten opera by Johann Adam Hiller. The "Schlaffied des Sturmwald" by Karl Ditters von Dittersdorf demonstrates that Schubert did not invent the device of portraying agitation by means of rapidly repeated eighth-notes in the treble and scalewise passages in the bass. And the four examples of a chorale prelude, as treated over the course of a hundred years by Samuel Scheidt, Dietrich Buxtehude, Johann Pachelbel and J. S. Bach, is a graphic demonstration of evolving contrapuntal technique.

In these days when our composers are preoccupied with "originality" at all costs, it might not be amiss to note how little the great masters were preoccupied with originality for its own sake, and how much of their creative output took the form of borrowing and refining the work of earlier composers.

The Story of an Orchestra
By Boyd Neel

In 1932 a busy general practitioner in London with a flair for music was told by friends that he should take up music professionally. The Boyd Neel Orchestra was the result, which shortly became famous in England and later toured in Australia and New Zealand. Mr. Neel here tells the story of the orchestra's beginnings, on a capital of less than \$100, its early struggles and eventual triumph. The foreword is by Benjamin Britten.

THIS MONTH'S COVER...

James Tamburini (right), trumpeter of the Detroit Little Symphony, examines an orchestral score with music librarian Arthur Luck. (See "Dilemma in

Detroit," p. 9).

Luck, a former double-bass player, donates all scores used at performances of the Detroit Little Symphony.

Valter Poole (standing) and other Detroit Little Symphony men listen glumly as clarinetist-manager Rosen outlines prospects.

DILEMMA *in* DETROIT

... Survivors of the Detroit Symphony
support themselves with odd jobs and look
for a successor to Sponsor Henry Reichhold

By SAUL H. SHIEFMAN

AT THIS MOMENT, Detroit is the only U. S. city with a big-league baseball team that does not also have a full-size symphony orchestra.

The Detroit Symphony expired in 1949, after a six-year feud involving Conductor Karl Krueger, millionaire chemist Henry H. Reichhold, financial mainstay of the orchestra, Detroit's newspapers, and orchestra men themselves.

When the orchestra went under, most of its players drifted away to engagements in theatre pits and night clubs, recording jobs, or positions with other symphonies.

Left behind were 30 determined musicians, including first

violinist and assistant conductor Valter Poole, and other outstanding players, who refused to let the Detroit Symphony die.

Unable to finance a full-scale symphony orchestra, they reorganized as the Detroit Little Symphony. Their grit and devotion, and the loyalty of their ticket-buying public, have kept the Little Symphony going ever since.

Clarinetist Bernard Rosen doubles as the Little Symphony's business manager and press agent. His apartment serves as the group's office. Wives and friends of musicians take care of the typing, mailing and bookkeeping.

Before their first concert, members of the Little Symphony went to their tough union, the American Federation of Musicians, demanded and got a flat rate per concert so they could rehearse as often as they pleased. As a consequence the concerts have been an artistic triumph but the players have wound up owing themselves money. Though the Little Symphony invariably sells out, no orchestra, large or small, can support itself from ticket sales alone.

Little Symphony musicians hope for better times, and meanwhile support themselves as best they can. One of the country's finest oboists manages a roofing and siding business. A distinguished flutist repairs instruments in his tiny hotel room.

CONTINUED ON NEXT PAGE

Dilemma in Detroit CONTINUED

A cellist sells brushes, a violinist plays saxophone in a tavern. Of the three trombonists, one sells mop handles, another is timekeeper in an auto plant, the third makes picture frames. A bassoonist sells musical instruments over the counter, a cellist paints portraits. Many of the musicians are supported by their working wives.

Detroit music-lovers for their part have supported the Little Symphony in numerous ways. A ballet instructress lends her studio for a rehearsal hall, spends hours preparing cake and coffee, personally scrubs up before each rehearsal. A music librarian who once played double-bass donates the scores for every performance. A night-club owner has experimented with combinations of oboe, bassoon, clarinet, trumpet, bass and piano—rather exotic by ordinary jazz standards—to provide work for Little Symphony members.

All these praiseworthy doings, however, do not take the place of the estimated \$200,000 a season which Mr. Reichhold formerly contributed to make up the Detroit Symphony deficit. He also bought it an impressive theatre and office building (now leased for wrestling bouts), and sponsored it for two years in a nationwide ABC broadcast.

No one could deny that Chemist Reichhold was lavish in his support of the orchestra. Detroit music-lovers felt, however, that the millionaire chemist, a novice in music, had received and acted on bad advice. Orchestra men were dissatisfied with Conductor Krueger. Paid attendance at concerts was dwindling. Detroit's critics wrote stinging reviews of the orchestra's performance.

The blow-up came in April, 1949, when Georges Miquelle, famous first cellist of the Detroit Symphony, was charged with apologizing to a visiting soloist for the orchestra's shoddy playing, and was fired on the spot.

Frayed tempers exploded in crackling newspaper headlines. The DAC News, official publication of the Detroit Athletic Club, to which a majority of prominent Detroiters belong, observed in a blistering editorial titled "Stop the Music!" that "Mr. Reichhold has made of his presidency of the organization a reign of contradictions."

The editorial continued: "He has brought to it, in many cases, rare enthusiasm, genius and sincerity of purpose; but in others, mere flamboyance . . .

"Largely, however, the fortune which could have been concentrated on building a really outstanding symphony orchestra was channeled into a bewildering network of projects—a magazine, two recording outfits, the Carnegie 'Pops' series, a proposed artists' bureau, a nationwide broadcast—all of which failed to accomplish what was supposed to be their prime purpose, that of making the Detroit Symphony both great and self-sustaining . . .

"Instead, amateurish ineptitude has characterized the show, from management through to the artistic side, and Detroit's music-lovers have witnessed the spectacle of a one-man band jiggling along to the tune of a bad press, dissension and very adverse criticism."

The Detroit Times reprinted the editorial in full. Other comment indicated that many Detroit music-lovers felt the same way. But however well-taken the position of the club paper, no member of the Detroit Athletic Club came forward to take the place vacated by Mr. Reichhold.

This year, Detroit celebrates the 250th anniversary of its founding. Little Symphony members hope one of the birthday events will be a concert series under an internationally famed conductor. The sight of Detroit's musicians performing under a great conductor may be a prelude to the rebirth of the Detroit Symphony. Thus the Little Symphony's faith in Detroit may be finally vindicated.

THE END

Little Symphony has no conductor. First violist Poole (standing) is musical coach. He was associate conductor under Krueger.

How Detroit players make ends meet: Flutist Otto Krueger (no relation to former conductor) repairs musical instruments.

Bassoonist Hugh Cooper, shown demonstrating trumpet, clerks in a music store. Cellist Ray Hall is a portrait painter.

Douglas Marsh, cellist, displays his brush salesman's kit to admiring violinist Jack Boesen and percussionist Arthur Cooper.

While strings rehearse (background), Little Symphony wives and friends do paperwork. Man in mouton collar is buying tickets.

Zoltan Kodaly

Zoltan Kodaly

was my teacher

By GYORGY SANDOR

ANYONE WHO PLAYS a musical instrument should, in my opinion, make the study of composition an integral part of his education. Once he understands how a work is created his interpretation as a performer of almost any composition will be far more searching and more nearly as the composer intended it.

In my own playing I have found invaluable the early training I received from one of the greatest living composers, Zoltan Kodaly. I studied composition with Kodaly for five years, from 1929 to 1934, at the Budapest Conservatory. I was one of a class of 10 who started with the master and one of five who finished the five-year term. I did not want to be a composer but I did want to find out how masters, whose works I was playing, had put their compositions together.

Kodaly's method of teaching composition differed from that of any other composer I've met. First of all, he did not seek to turn out composers in assembly-line fashion. Through building a sound knowledge of earlier composers and their compositions, he sought to eliminate imperfections in the music we wrote. Harmony, counterpoint and choral writing occupied much of our time. We concentrated on vocal counterpoint while we went through the various musical forms. We spent three years copying out the two and three part motets of Palestrina.

Every year we had an examination which concluded individual phases of the course. When we finished, we felt we should just be starting to study that particular subject, so enormous did its difficulties and manifold forms appear to us. Kodaly took for granted that at this point we knew something of the different forms, so he did not tell us how to write a rondo, for instance. He would say, "Bring me a few rondos." We would do so, and then he would take our compositions apart and show us where we had failed. This was a negative approach, but it developed in us an ability to analyze our own and other composers' creations.

Creative talent which can produce lasting works, Kodaly told us, is a combination of genius and acquired craftsmanship. Kodaly's idea was that everyone should be able to write in any com-

poser's style, and no one could hope to achieve individual style until he had mastered the styles of other composers in all periods, from Palestrina to Scriabin and Ravel.

Composition under Kodaly was taught as a main course, and not as an auxiliary one. We delved into the writings of the greats of the past: we studied what they wrote and tried to master their styles as completely as possible. We all entered the class cocky and self-assured, thinking we were good composers, and gradually we realized we had been writing in someone else's style.

Music, Kodaly taught, is basically a formalistic art. It is the form that counts and what is *done* with the fundamental musical idea. Anyone can write a melody but a symphony or mass requires skill. Kodaly frequently used Beethoven's Fifth Symphony as an example. The first four notes which open the initial theme could have been written by anyone, but it took genius and skill to develop those four notes into the structure of this great symphony.

Most modern composers elaborate on one or sometimes only part of one of the elements which make up music—melody, harmony and rhythm—and fail to recognize that the other basic factors are just as essential. Because these composers seek to avoid the traditional technique of developing their musical ideas, they sometimes take a short motif, keep on repeating it over and over and then modify it slightly. The public's relief when the initial theme has been discarded is sometimes so great that it actually believes a new theme has been introduced.

Most of today's composers are afraid to write a melody. Hence the main characteristic of modern music is dissonance, the result of searching for cacophonous intervals or sonorities which are meant to give the impression of being new and different. Occasionally a modern composer will put in a banal melody, a copy of a romantic tune, and we are so relieved to find melody at all among the dissonance that we welcome it as new and fine.

Needless to say, melody, harmony and rhythm must not be used haphazardly but they must follow the same basic principals that existed in classical and pre-classical music.

These were and are the fundamental teachings of Zoltan Kodaly.

After I left Hungary I saw him thrice again, once in Budapest, once in London and once in Dallas where he was guest-conducting. He is now president of the Academy of Sciences in Budapest, not writing or teaching music, but studying the Hungarian folklore and literature to which he and his colleague, Bela Bartok, devoted themselves.

From 1906 until Bartok's death in 1945, Kodaly and Bartok lived in Budapest and collaborated in collecting between 3,000 and 4,000 Hungarian national melodies. Most of these are still in manuscript form, although some were published as "Bartok-Kodaly" arrangements. Since Bartok's death, Kodaly's interest in preserving Hungarian folklore has increased to the extent that it has almost crowded out his interest in composing his own works.

Kodaly has never been a good pianist, in the professional sense of the word, but he is a good conductor. I do recall his statements on the erroneous interpretation of some of his works for piano and orchestra. He pointed out to me the failure of western interpreters in realizing that his own compositions and other typical Hungarian music have a charac-

teristic short accent on the first syllable. Other Europeans and Americans usually misplace this accent by holding the first note too long. The result is a distorted interpretation.

As a teacher, Kodaly was one of the most laconic I've ever met. He's mellowed a bit with age and grown a little softer. He seldom said a complete sentence and when he spoke it was biting and to the point. His memory is fantastic; it is my belief that he remembers every composition he has ever seen, not only of the masters, but of everyone who studied with him in the past 40 years. I have seen him read a score, listen to someone play the piano, correct mistakes on a blackboard and dictate at the same time. He is thin, of medium height with deep-set eyes, long hair and a pointed beard. When he was past 50 he took up ice skating and became an excellent figure skater. He is one of the most brilliant men I ever met, speaking a dozen languages and well-read in all.

Indicative of the intense musicality of the man was his reaction to a recital I gave in Budapest when I was 18. I played the Liszt B Minor Sonata and lost a chord somewhere along the way. Kodaly's (Continued on Page 61)

Kodaly photographed his friend Bela Bartok (left center), with whom he collaborated in collecting Hungarian melodies, recording folk-singing in 1910 in a Transylvania town

How to Teach Adult Beginners

• • • • • They pose many problems not encountered with younger pupils, but teaching them is certain to be a fascinating experience

By R. M. GOODBROD

DR. WARREN is a successful practitioner in our town. Whatever he does, he does well. He plays an excellent game of golf, and his flowers have won prizes at the county fair. When he asked me if I would take him as a piano pupil, explaining that "he had been telling so many of his patients to take music lessons that he thought he would try some himself," I knew what was coming.

"That's fine," I said, "and I'll bet you want to play Rachmaninoff's Prelude in C-sharp Minor right off, don't you?"

"Yes, sir!" said Dr. Warren. "When do we start?"

The doctor did start, and while he is not yet playing Rachmaninoff's Prelude, he is making good progress and enjoying it. He realizes that he couldn't teach me to perform an operation in one year, so he is content to take things as they come. We are having a fine time with piano, and next year I am sure he will be able to play the Prelude.

There are hundreds of adults like Dr. Warren who have taken up the study of piano in middle life.

All teachers whom I have queried support this statement. At a recent piano forum, we teachers compared notes and found one-eighth to one-third of our classes made up of adult beginners.

Many other grownups are interested, but hesitate to begin music study, either from timidity or the belief that they are "too old to start."

Now there is no reason why anyone, of whatever age, cannot study piano with gratifying results. (And by this I do not

mean learning to play like Horowitz; but almost anyone can with patience acquire sufficient musical skill to compensate in enjoyment for the time and effort spent acquiring it.)

However, adult beginners do constitute a special problem for the teacher. In some ways they make faster progress than children. They have more patience, and their concentration span is longer. And since they are studying not because of parental urging, but because they really want to play, they work harder and practice longer.

On the other hand, adults are at a disadvantage in many respects. They generally have poorer coordination than children. Twenty-year-old Tom could barely make one finger work when he began studying. To play a three-note chord was a tremendous effort. Yet eight-year-old Billy could play chords firmly the first time he came for his lesson.

Adults will as a rule be slower in the mechanics of phrasing, accenting and pedaling than children. The lifting of the hands for many adults is a clumsy process, whereas younger students can generally do this with ease. They can imitate desired touches with greater facility than adults.

Adults are often very self-conscious about their playing. Mrs. Jones, aged 30, was embarrassed by her meager skill. She was so timid that it hampered her progress. Her daughter, who was studying at the same time, had no such inhibitions, and advanced far more rapidly than her mother.

Adults are not always pliable where interpretation is concerned. Miss Lowe, in her twenties, lacked imagination. Her play-

ing was stiff and unmusical. Yet to dramatize the music with visual imagery would have made her self-conscious. She would have felt rather silly if asked to think of flying birds, say, in a rapid arpeggiated passage. Little Sandra, on the other hand, had keen imagination and would have been fascinated by such an idea.

Adults often have difficulty in memorizing if they are not in a business or profession which demands memory. Al, a skilled auto mechanic, had better control of his fingers than most grownups, but could hardly memorize four measures; while Jimmy, who had to learn something every day as part of his fifth-grade school-work, memorized rapidly and accurately.

Thus teaching adults is a challenging assignment for any piano teacher. To meet the challenge one must know all he can about methods and materials. He must be a shrewd psychologist, and must have an ample supply of patience and enthusiasm for use when the student's runs out. Above all he must be resourceful in dealing with the various types of adult beginners.

I have found that most of them fall into one of three categories. There is the true adult beginner, with no knowledge of the piano and very little experience in listening or musical participation; the adult with some experience in singing or playing a musical instrument; and the adult beginner who plays by ear.

Most interesting in many ways is the true beginner. What wonderful enthusiasm these people bring to their first lesson! One lady wants to accompany her husband, who likes to sing. Another wants to try that Boogie-Woogie stuff. Still another is eager to learn "Clear do Loon," by Debussy. All are full of anticipation.

This is the time, while you have their interest and enthusiasm, to attack the problem of coordination. I won't forget Tom, who had never had a lesson in his life. He was a big, hulking fellow with hands like hams. When he spread his fingers over the keys he covered about fifteen notes with each hand. To pull them in and play five notes (Continued on page 56)

Music has no short-cuts

• • • • • Solid careers emerge only from unhurried, systematic training

By JOSEPH FUCHS

As told to Rose Heylbut

THE YOUNG VIOLINIST's greatest need today is for something he cannot rush off to acquire in three months' practicing.

He needs the solid, unhurried continuity of background which formed the taken-for-granted training of the violinists who are now over 35. That is the only kind of training which can produce an eminent violinist, and the chief reason members of the older group continue eminent is that they had it.

I know perfectly well that present economic conditions speed up the need to start earning—not only in America but all over the world. Not being an economist, I have no idea what to do about it, but I do know that a quick snatching at income is not the way to build an enduring career.

I have watched young violinists hurry through background material in a quest for short-cuts into the major works which will allow them to show themselves. I have had them come to me when, as professionals, they suddenly realize that something has gone wrong.

The training from which solid careers emerged (and continue through middle life) centered in the unhurried acquisition of skilled controls. It included a thorough, practical mastery of all the accredited violin studies—De Bériot, Sauret, Rode, Kreutzer, Wieniawski, Paganini. It included a study of Spohr. And the lad who went through such a program of study developed qualities which enabled him to transform youthful fire into mature control.

Today, it is, alas, not uncommon to cut corners. After Rode, students often want to go straight into Paganini—and then on to a recital. They like to learn the one or two Mozart concerti they may need for programming, but they don't want to bother to learn others merely as study pieces. Spohr is virtually untaught. I've often been asked why one need spend time on Spohr—he's not an important composer. True, he isn't—but he is indispensable for phrasing. I know no sounder initiation into the management of the long phrase. Students who find Mozart a problem demonstrate a lack of background in phrasing.

Cutting corners produces a very glib technique wholly unsupported by the finer arts of phrasing and bowing. We have numbers of youngsters who can fiddle Paganini but get lost in Bach or Mozart. When they realize how lost they are, they seek further short-cuts and cure-alls, "guaranteed" to patch up whatever ails them in ten lessons.

The point is, it doesn't work that way. You cannot pounce on tricks, as an afterthought, and come out with skills that represent a long continuity of study. I had 12 years of solid work under Svecenski and Kneisel before I dared show myself as a player. What they gave me enabled me to carry on throughout my professional career.

In approaching actual technique, pay attention to nuances. Don't worry about the big line until you know the meaning of a small line. Subtlety of nuance is developed through the medium of the bow.

You speak through your bow. With a

fair left-hand technique and an expressive bow, you can produce a beautiful phrase. With colorless bowing, it is virtually impossible to bring out a beautiful phrase no matter how fluent your left hand may be.

Naturally the left hand is important to your playing, but the right arm gives it life. Great violinists assert themselves through the bow. Kreisler, Heifetz, Casals have wonderful left hands—of course. But their greatest ability lies in the subtle nuances of their bowing. Whenever you find a fine violinist going splendidly on into his 40's, his 50's, his 60's, be sure that his motive power is a superlative bow arm.

How do you perfect bowing? You begin, of course, with the classic exercises—long bow, spiccato, staccato, etc. First you practice to learn them. Then you practice to make them habit. Next you work for expressiveness of nuance.

Try to develop equal strength at the point and at the frog. (The studies of Gavines are excellent for the point of the bow; those of Casorti, for the frog—where most players are weakest!) Practice *crescendi* at the point of the bow, and *decrescendi* at the frog. Since the bow is lighter at the point than at the frog, this develops control.

In addition to exercises, play chamber music—all you can. The quartets of Haydn and Mozart help bowing, because they help phrasing. Their bowing problems are considerable, even more so than those of Beethoven or Brahms—which is why they offer opportunities (Continued on Page 57)

IT'S FUN . . . IT'S FREE . . .

It's Forum!

A sprightly get-together introduces Knoxville audiences to their symphony orchestra and tells what orchestral music is all about

KNOXVILLE, TENNESSEE, was proud of its symphony orchestra. Members of the orchestra's board of directors were eager to get maximum attendance at concerts, and also to make sure that listeners enjoyed the music.

Many in the Knoxville audience, however, were hearing concerts for the first time. They were perplexed by the learned technicalities of musical form and the unintelligible French and Italian expressions that appeared on symphony programs.

Dr. George L. Inge, one of the moving forces of the orchestra, asked: "Why not have a forum, explain to people what symphonic music is all about? We can stress the idea that we're all learning together."

Members of the orchestra's board of directors thought it was a good suggestion. So did Conductor David Van Vactor, who offered to help.

A sprightly booklet (right) told what the forum was all about. Meetings were scheduled for Sunday afternoons, once a month. Guest lectures briefed audiences on what to expect at the forthcoming concert. Conductor Van Vactor lectured both as conductor and composer. Piano soloist Alfred Schmied discussed "Our Orchestra with the Piano." Concertmaster William Starr appeared as violin soloist. John Tegnell demonstrated an aria, and with his University of Tennessee Chorus gave a preview of Bach's "Christmas Oratorio," later done by the orchestra and chorus.

Forum meetings, which began last fall, went over so well that they will probably be repeated next season. All concerned agree the forum idea is a pleasant and painless way to introduce a symphony orchestra to its listeners, and to prepare listeners for what they are to hear. THE END

Do you too say:
"I LOVE MUSIC"
BUT
I DON'T UNDERSTAND IT?"

Let's learn together!

1st Step
Know all about your Orchestra

Can I name the instruments?
What section are they in?

OBOE

Is that a clarinet or an oboe I hear?
Did you say that...

Kettle drums can be tuned?
And harps have pedals?
What is a Concert Master?

2nd Step
Let's learn the tunes!

We'll gather around the piano and hear the tunes on our program—sing them—whistle them if we like.

At the concert we'll know what's coming...

sweet
Hin-de-mith

3rd Step
We'll sing with a chorus!

This time we shall hear about an Oratorio—a Christmas one written by Bach. Members of the UT chorus and its director will sing some of it and they may let us try too. When we go to the concert we will be humming with them!

4th Step
We'll look over the entire program

This time there are no soloists. You will meet your conductor who will talk about his program, how he chose it and why.

You will again hear the melodies or themes of the different numbers to be played and sing them and clap them and hear a recording. If you've been with us these four steps—you are understanding music!

Step by step, the Knoxville pamphlet tells what makes an orchestra tick. Later sessions of the Forum discussed the aria, the concerto, other musical forms large and small. The meetings, held one Sunday afternoon a month, drew a large and attentive audience.

More about the PHARYNGEAL VOICE*

A widely-used method in the golden days of Italian Bel Canto

By E. HERBERT-CAESARI

AS A COROLLARY to my article on "The Pharyngeal Voice" in the November 1950 issue of ETUDE I now propose to explain, as clearly as is possible with such a complex subject, how the three mechanisms comprising the vocal cord system can be engaged isolatedly at will, how any two or all three mechanisms can be employed simultaneously, and what sensations peculiar to each mechanism the singer should experience when they are correctly engaged.

First, however, I would advise the student to re-read the aforesaid article by way of a refresher for what follows.

Next picture the three mechanisms—falsetto, pharyngeal, and basic or so-called chest voice—as three horizontal vibratory layers superimposed, three depths of vocal cord. The falsetto has less depth than the pharyngeal, and the latter very much less depth than the basic or normal mechanism. To illustrate: the falsetto has, say, the depth (thickness) of one visiting card, the pharyngeal of two cards, and the basic of five cards. Which goes to show that the basic mechanism producing the normal voice has considerably more depth than the other two.

The falsetto, or uppermost layer, is generated by the thread-like upper edges of the vocal cords which, in order to produce this washy sound, separate much more than is the case for the production of either the pharyngeal or normal tone. Consequently, during falsetto a much greater quantity of breath is expended, in that not all of it is employed in producing tone (as is, or should be, the case with normal and also pharyngeal tone) but escapes through the relatively big slit, thereby diluting the tonal product. The Old Italian School used to call it *Falsetto di testa* ("false little head voice") because, as a sensation, it seems to be generated high up in the head cavities. It is a "head" voice,

but of a pale, insignificant, breathy sort, and quite anaemic.

The falsetto mechanism is set in motion with little breath and a barely appreciable tension. Little *will* is needed. In other words, the singer does not deliberately seek, nor does he feel, any definite resistance to the slight breath pressure he is exerting. Indeed, he can barely feel any resistance because the cords, now in oval formation, permit a considerable escape of breath, as explained above. If, however, we mix this wishy-washy sound with even a small percentage of pharyngeal voice, we get a mixed tone really worth while. The falsetto, therefore, has some importance, for it acts as a softening carpet to the somewhat steely quality of the pharyngeal mechanism, particularly in male voices. The falsetto is best produced with the AH and the open EH vowels, with mouth well open; the resultant tonal sensation is very high in the head and apparently created there.

To engage the second-layer mechanism, responsible for the so-called pharyngeal voice, the cords come together leaving only a thin slit, the thin upper edges only being engaged. To gear in this mechanism by itself, the singer should employ a very narrow or closed *eh* vowel (as in pen) and, with very little breath, produce a series of short staccato tones, making no attempt to produce a big tone, but just a thin, compressed, bright little tone like a taut silver thread. Let the tenor experiment on, say, high A flat or A natural, and the soprano, mezzo, or contralto on, say, A or C (second and third spaces). This bright, thread-like tone offers positive resistance and gives the singer a feeling of flexible firmness (not stiffness).

To produce this narrow *eh* sound with which to seek out and engage the pharyngeal, the mouth should not be opened wide but kept to a horizontal slot-like shape. It is a peculiar little sound, when produced in this way, something akin to that of a "penny trumpet." The exponents of the Old Italian School called it "old woman's cackle."

Once the singer feels he has found and isolated this mechanism both from the falsetto and the normal voice, let him "push into it" a little more to feel his way and see how it responds to a spot of crescendo. This slight crescendo pressing must be made with a downward thought: light, firm, never heavy or rough. As with pen or pencil the downward thought accompanying (Continued on Page 43)

* Since Mr. Herbert-Caesari's article, "The Pharyngeal Voice," appeared in the November, 1950, ETUDE, many readers have written in to ask for further information on the subject. This article is the result. In addition, Mr. Herbert-Caesari has offered to explain by personal letter any aspect of the subject which readers find puzzling. Queries may be addressed to him in care of ETUDE, Bryn Mawr, Penna.

Class piano teaching gets results

. . . . A successful teacher reveals the formula she has developed through years of trial and error

By ESTHER RENNICK

FOR TEN YEARS my weekly teaching schedule has included one private lesson and one class lesson for each pupil. Occasionally I've wondered if I could be right when every teacher of my acquaintance was advancing arguments against class teaching, or refusing even to discuss it.

For my part, I thoroughly enjoyed both kinds of teaching, my pupils loved class activities, parents were warm in their approval, and the results I was getting were for the most part wonderfully satisfying. Yet there were, inevitably, periods of discouragement when it seemed foolish to stress the class-piano method when virtually the entire teaching profession seemed dead against it.

Today, however, class piano teaching, is no longer in the experimental stage. It has been tested thoroughly in the public school curriculum. And we don't have to read books of psychology to learn that children and young people love to work and play together. We know how much they enjoy games, competition, companionship, and an audience of their own contemporaries. Class work provides all these things, which in turn makes it an easy and pleasant way to teach rhythm, accompanying, ensemble, sight-reading, key-signatures, scales, chords, ear-training, memorizing, music appreciation, and preparation for the pupil's repertoire classes when he becomes an artist pupil.

Group work also provides a proving ground for creative expression of musical thought and feeling—something which is very necessary if music is to be a valuable

social experience. A child becomes a good accompanist by accompanying; he learns to play ensemble by playing with others.

When a pupil begins the study of music his teacher has three responsibilities. First: The pupil must enjoy his lessons. Since he already loves music, we must guard against making him dislike it by distasteful instruction, attitudes, materials and methods. The cultivation of his taste is a process of growth, not a quick change-over.

Second: His foundation must be laid slowly and sturdily. It must not only be pianistically sound, but must be able to support him in any field of music he chooses to enter. It must be adequate to enable him to use his music as a hobby, a social asset, or as relaxation when he becomes a dentist or a president.

Third: His lessons must fit in with his other activities as to content, methods, and material. They must offer him something rather than constitute a threat or a promise that he will be either glad or sorry he did or didn't practice twenty years from now.

As a word is the carving and color of a thought, our vocabulary should be chosen with great care. The words "practice and work hard" should be used sparingly with children. "Play at the piano; make ready for fun in class" works more effectively. When we fit our vocabulary to that of our student we may expect to be rewarded by hearing, "You seem just like one of us."

At the beginning of each new season I start my beginners in classes of four. As they stand or sit at the keyboard we learn the keys by the "two-car-three-car-garage" game. We call D the sandwich note and B the stinging note. But with older pupils,

we go about things in a more dignified manner. We start by playing a game called "You-name-and-you-get-it." Even after they know the keyboard backwards it's very hard to get them off the game because they like making a score and trying to be winner. In order to progress into new class activities we call on the parents' cooperation, asking them to play the game with their children at home.

At this first lesson I distribute beginner books to every child, and to keep my own interest alive I use different books with each class. Before our second class meeting each pupil has received a private lesson so that he is ready to play with other pupils. In class, then, four students sit in pairs at the two pianos. While one student at each piano plays, his keyboard partner points for him and watches for wrong fingerings.

From this time on the curriculum may develop along any line the teacher's imagination suggests. And it's always a good idea to invite the suggestions and help of more advanced students, extending special invitations to backward teen-age pupils. Their help with beginner classes works miracles toward improving their own self-confidence.

During the first months in beginner classes pupils take turns clapping rhythms, singing, and supplying a rhythm band, while others play the piano. We draw musical signs on the board and on theory papers, play games with flash-cards, musical checkers and such.

Each child has a set of theory papers with keyboards to color, signs to draw, and notes under which to print. A simple book of familiar songs and a duet book are added very soon. As soon as the pupils learn to play double duets together, the morale of the class hits the ceiling. Also the teacher's troubles begin. Pupils want to do nothing but play duets together.

I let them. But another teacher might feel duets are a waste of time, and so prefer to substitute a talent program with each child playing whatever he has learned, including tunes for other class members to sing. Or pupils may be easily distracted from their ensemble fever by the rhythm band, a new card game, an ear drill.

As soon as the classes are on sure footing—one to three months—I divide and in some cases (Continued on Page 61)

Sing with your Fingers

Through systematic practice and use of correct basic principles you can master the "singing tone" characteristic of the greatest pianists

By MARY BOXALL BOYD

AT THE PRESENT TIME, piano playing has been raised to a plane of mechanical perfection never known before. Among public performers, virtuosity is taken for granted. Yet it often appears that having developed a formidable technique, today's performer has nothing to say with it.

Much of the uninteresting piano playing we hear today is the result of teaching that ignores the "singing tone." Skeptics have even doubted that such a thing exists, maintaining it makes no difference whether the keys are struck by a pianist's finger or the end of a broomstick.

Theodore Leschetizsky, greatest piano teacher of the 19th century, took just the opposite viewpoint about the "singing tone" in piano playing. As a result there came from his studio such virtuoso performers as Paderewski, Gabrilowitsch, Hambourg, Schnabel, Leginska and Bloomfield-Zeisler. Their playing was polished and technically brilliant; but it was, above all else, expressive.

I once heard a series of operatic transcriptions played by a Leschetizsky pupil. He played the arias with a tone so sonorous and expressive that one listener exclaimed: "He does with his fingers what many singers fail to do with their voices."

It is a fascinating and rewarding procedure to learn to sing with your fingers. I have known many students, up against

a blank wall of frustration, to be re-inspired and put on the proper track again simply through an understanding of this phase of piano study.

The basic skill needed for a singing piano-tone is simple, and can be readily understood. Mastering it is merely a matter of systematic practice, using correct basic principles.

The first step is to assume the correct hand-position. The hand should be held in the shape of a vault, with the knuckles at its highest point. The fingers, relaxed and slightly curved, rest on five consecutive notes—Middle C, D, E, F, and G. The wrist is held low, parallel to the keyboard. The muscles of the wrist should remain flexible. The arm should be held in a suspended position, away from the body. There should be no stiffness in the arm position; nor should it dangle from the shoulder like a flabby dead-weight.

Now consider the instrument before you solely as a medium for expressing beautiful tone quality. Begin with the third finger on E. Sound the tone by a slight upward movement of the wrist, followed by a barely perceptible sliding of the finger on the key. In this manner the tone is set in vibration.

When the tone is sounded, relax the pressure of your finger on the key, but do not release it entirely. Sustain its vibration long enough to carry over to the next tone played. After the tone is released, the hand should return to its original position.

Continue practicing in this manner until you have mastered the playing of a single full, sonorous tone. Then see if you can acquire a crescendo and diminuendo on one note. Continue with the third finger on E. Play the first tone as softly as possible. Then repeat it with a barely perceptible increase in volume. See how many gradations of tone you can create between your softest pianissimo and your most thunderous fortissimo. Try to increase the number of gradations, and the range of dynamics also. In this way you will be able to provide all the shades of nuance.

When the third finger has run the gamut from pianissimo to fortissimo, and back again, proceed to the forefinger and practice with it in the same way; then to the fourth finger, the fifth finger, and finally the thumb.

During all these exercises, neither the fingers nor thumb should leave the keys. Each finger should glide in and out over the surface of the key to prepare for a new stroke. Gradually the fingertip will become more sensitive to the surface of the key, and thereby will become more elastic and more obedient to the player's requirements.

Check constantly to be sure that the position of hand, wrist and arm are correct, free of stiffness and tension, yet free of flabbiness.

When the right (Continued on Page 51)

Monster IN HIS HOUSE

*With parts salvaged from
discarded pipe organs, a psychology
professor builds a modern in-
strument in his seven-room bungalow*

NEIGHBORS of 43-year-old Dr. Hunter Mead, professor of Psychology and Philosophy at California Institute of Technology, good-naturedly comment as they look over toward his Pasadena seven-room, one-story bungalow: "Well, there goes another wall to make room for that monster!"

"That monster" is a pipe organ built by Dr. Mead. To date it numbers 1050 pipes. In addition there are in the Mead attic 1200 second-hand pipes, in the garage 300 and in the cellar another 300—making a stockpile of 1800 from which Dr. Mead will augment his ever-growing hobby.

This home-built organ represents a 29-year-old dream come true. Hunter Mead was only 14 years old when he first envisioned a pipe organ built into his own home so that when the mood came upon him he could sit down and play to his soul's content. He had started piano lessons at the age of six and at 14 had turned to organ lessons. It was too much for a young man bent on a Ph.D. degree to consider the expense of building his own organ immediately, so he set the idea aside and went ahead paying for practice time on various church organs.

But he could dream. And occasionally he substituted at funerals and weddings, making a few extra dollars from his avocation.

In 1947 Hunter Mead bought a house. His choice didn't hinge on the size of the closets, the nature of the kitchen facilities or the number of bedroom windows. A cursory glance showed that they were adequate for bachelor's quarters. His decision was governed by the organ potentialities of the house.

It wasn't long before Hunter Mead had converted the extra

By WELDON D. WOODSON

bedroom in his new home into a chamber for organ pipes, and had begun planning how he would arrange his organ console in his 15 by 30-foot living room.

Originally, Hunter Mead planned to save his money for several years and build a new organ. But his program changed when in June of 1949 he learned that a nearby church was trying to dispose of its 1907 organ for a mere \$1200. After completing the purchase he had only \$100 left in the bank. Even worse, a condition of the sale was that the organ must be dismantled and removed immediately.

With the help of a crew of fellow organ-addicts and curious friends, utilizing a trailer and an auto rumble seat, Dr. Mead carried away the thousand pipes and several thousand pounds of chests and blowing equipment—all in three days. Almost overnight his back lawn and garage took on the appearance of a salvage business.

As he pawed through the several tons of equipment and contemplated putting the parts together, he was faced with a myriad of questions his previous reading left unanswered. A professional organ builder, 27-year-old ex-GI Marvin Blake, came to his rescue along with Robert Humphreys, a photographer who had made electrical work his hobby, and Raymond Durant, who is in the department store display business and makes carpentry his avocation. These and other friends who have devoted an occasional week-end to the job made the Mead home look like a boarding house, for they all joined around Hunter Mead's table at mealtimes.

To begin with, Dr. Mead learned that the pipes required a ceiling height of 13 feet, and as the room he had planned for

their chamber was a mere eight feet three inches high it was necessary either to rip out the ceiling or remove the floor and excavate. The latter proved to be the only answer, for it was necessary also to provide a stronger foundation for the heavy pipes, as well as adequate thermal and sound insulation.

The floor was two feet above ground, which with the eight-foot room totaled ten. So with pick and shovel the men dug a three-foot-deep pit, the width and length of the room (11' X 14'), pushing twelve tons of earth in wheel barrows up a steel ramp and out a window two feet above the old floor level.

For their slab and sidewalls they shoveled sand and cement into a mixer. More than eight tons of the mixture went in by the same window through which the dirt had come out. To dry it they boarded up the windows and covered them with felt for insulation. Next they lined the cemented surfaces with pine planks backed with felt. After a month of arduous labor they had an organ chamber that rates A-1 for both thermal and sound insulation.

Installation of the organ proved to be not quite so simple as merely putting the old parts together again. After all, Hunter Mead couldn't sacrifice completely his dream of a new organ. His goal of an up-to-date organ called for some renovations on the 1907 relic. He and his friends, therefore, modernized most of the action, employing electricity where the initial builder had used pneumatic tubes and pouches. They retained the original pipework, merely rearranging it to make the instrument conform to the best current tonal thinking.

Dr. Hunter Mead carefully fits into place one of the 1050 pipes of his home-built organ (left). He still has a stockpile of some

In September of 1949 Hunter Mead obtained another and still larger organ, built in 1886 and now discarded from a neighboring church. Again his back lawn, garage, attic and cellar went into salvage service—a veritable mine of equipment for experimenting with tonal effects and enlarging the resources of his instrument. Parts he obviously could not use he sold to churches and to fellow hobby enthusiasts.

ACTUALLY it would probably have been easier to build a new organ. But the process of integrating relics of 1907 and 1886 together with required new parts saved Hunter Mead hundreds of dollars. Furthermore, the problems he faced assumed the invigorating aspect of challenge. Meeting them, Dr. Mead experienced a glow of satisfaction. Like clay in the potter's hand, a scrap heap had been shaped into an instrument that brings forth dulcet music.

After this new experience, too, both faculty and students at the California Institute of Technology regarded Dr. Mead as more than a teacher. He had become a builder, meriting a new kind of respect.

Most recently, Dr. Mead and one of his loyal crew, Raymond Durant, have been remodeling the front of the Mead house to make use of the porch, where they plan to install 600 to 800 additional pipes. Eventually this will call for a new console with a three-manual keyboard. (The present console has two manuals.) And there are other plans. Dr. Mead admits, however, that a seven-room bungalow does have its limits. THE END

1800 pipes stored in attic, garage and cellar, which will be added to the instrument after he has finished rebuilding his home.

BAND AND ORCHESTRA DEPARTMENT

Conducted by William D. Revelli

The Atlanta Symphony Orchestra, most of whose 90 members are professional musicians, has drawn players from Atlanta and across the U.S.

Southern youth builds a symphony orchestra

By WINIFRED WILKINSON

Atlanta Symphony Conductor Henry Sopkin advises a new recruit (upper left), Cellist Geraldine Dahlquist, and discusses a tricky spot in the score with Concertmaster Robert Harrison

Oboist Helen McKown and English horn player A. V. Ronchetti concentrate on their music during a passage for woodwinds.

IN A BRIEF FOUR SEASONS the Atlanta Symphony Orchestra has achieved the position of one of the 25 major symphony orchestras in the country and the leading symphony in the Southeast.

But the roots of the Atlanta Symphony are firmly imbedded in the youth of the South; and the present symphony owes its existence to the In-and-Out Atlanta High School Orchestra, which gave its first concert on February 9, 1939.

Today the symphony personnel contains top-notch professional musicians from all over the country. But the group also has many of the young southern musicians who originally played with the high school orchestra and now are mature, finished performers.

From the original high school orchestra came the Atlanta Youth Symphony in 1944 to 1946; and the Atlanta Youth Symphony, augmented by selected musicians from all over the country, became the Atlanta Symphony Orchestra in January, 1947.

During the past two seasons the Atlanta Symphony has included on its concert series such outstanding soloists as Risé Stevens, Jan Peerce and Dorothy Kirsten of the Metropolitan, Vronsky and Babin, pianists, Oscar Levant, and many others.

When Risé Stevens finished her concert on the opening night of the 1950-51 season of the Symphony, the beautiful mezzo-soprano walked to the front of the stage and said:

"I'm going to say something to you I never told an audience before. I know that you must be very proud of such a wonderful orchestra and such a fine conductor."

Oscar Levant, who appeared with the orchestra in the spring of 1950, showed his appreciation of the Atlanta Symphony by inviting the orchestra on a seven-city tour with him this season.

Most of the artists are

(Continued on Page 63)

SOME YEARS AGO, when my eldest grandchild was two years old, at the grandparents-showing-him-off-stage, we used to ask him to conduct. With a grin on his face, he would wave his arms frantically in the air. Since he had observed both his father and grandfather conduct, conducting to him was merely arm movement. I am not too sure that many of us in the conducting field do not have this same concept of conducting. However, waving the arms in the air is the least of a conductor's technique. He must be intelligent. He must be poised. And he must exercise over himself, as well as over the individuals who sing under his direction or who listen, absolute mastery and control.

Music-making today is an expensive business. Thousands of dollars are involved in a rehearsal of orchestra and choir. There is no time for anything that does not immediately and quickly produce the results the conductor demands. How much truth is embodied in a statement Sergei Koussevitzky recorded in the NEW YORK TIMES some ten years ago: "The conductor must be a professional athlete, a professional actor, a good psychologist and a great musician"!

The conductor must be able to stand on his feet from two to six hours a day. He must with his face, his hands and his body transmit to the performing group and through them to the audience all the feelings the composer has thought into the music. He must control the minds of the performing group so that the group becomes an instrument upon which the conductor plays and, through the control of sound, carries the emotional content to the listener. Since in larger groups each individual is so busy, so active and so mentally alert that he does not hear the other performers, the conductor must through his technique blend and fuse all sounds into white hot sound that glows with the magic of art and carries to the listener an aesthetic experience.

Unfortunately the many-sided responsibility of the conductor is not fully understood by some of us who attempt to conduct. Instead of achieving a sound that is white hot, too often we achieve a sound that is cold, clammy and out of tune and rhythm. Invariably we blame this unpleasant result upon the performing group or upon the acoustics of the hall or upon an unappreciative audience.

In reality no performing group can reach a level in performance higher than the con-

THE

Conductor's Magic

The group he directs is the choral conductor's instrument, and there is much to know about playing it . . .

By JOHN FINLEY WILLIAMSON

cept of the conductor. Too often conductors classify themselves as bad conductors, orchestral conductors or choral conductors when in reality, regardless of the medium, they must bear the responsibility of recreating the music of the composer. At 84 years of age Maestro Arturo Toscanini makes every individual in his immediate audience, as well as in his radio audience thousands of miles away, alive to the magic of his music. It would matter little whether he were conducting an orchestra, a band or a chorus.

Although the method of conducting remains constant whether one is conducting a choir or an orchestra, our interest in these articles pertains more specifically to the choral conductor. The technique of each individual singer varies just as the technique of the oboe player differs from that of the violinist or horn player, but the purpose still remains the creation of beauty through sound. The drill-master is a very important man with specific responsibilities. However, we must not confuse his field with that of the conductor.

It is the drill-master who should see that the choir is balanced as to parts, that it sings all time values correctly, that each individual in singing does not press, and so sharpen the pitch, or relax and flatten the pitch. He must also see that acoustical laws are obeyed, so that the chords are always in architectural balance. He must see that diction is not an end in itself, but

is a result of a phrase line that conveys the message of the poet and composer to the listener. When all these duties of the drill-master have been accomplished the conductor is ready to begin his work.

It is a mistake to believe that in our conducting we must have points to our beats so that the choir can keep time. Singers do not keep time because of what they see. They keep time because of the forward-moving rhythmic pace the conductor creates through empathy. When one sings under a great master he cannot make a mistake because he is too busy to stop and think. The conductor presses him forward with such electrifying power that he hasn't time to think how many beats he gives to a note or even what pitch he is singing. Everything in sound moves forward with such urgency that it is impossible to do anything other than the right thing.

If each one of us could cease projecting our individual ideas and accept the universal purpose and techniques of the great conductor, time beating would cease. A few weeks ago Mr. Koussevitzky conducted the Boston Symphony. Shortly after that he conducted the Israeli Symphony. The first orchestra was made up of musicians who had played under Mr. Koussevitzky for many years and knew his every movement. The second orchestra was made up of musicians of different (Continued on Page 49)

Six manuals aren't essential

... There are no "inadequate instruments" — only inadequate organists

By ALEXANDER McCURDY

SOMETIMES have a fit of plain speaking when organ students complain to me about the "inadequate instrument" on which circumstances compel them to practice.

Students' ideas of what constitutes an adequate instrument are apt to be on the grandiose side, especially if they are studying at a conservatory or university which has a more elaborate organ than they are accustomed to playing. There is something about sitting down at the console of a big four-manual organ that affects the novice like sliding behind the wheel of a custom-built Cadillac. One's own weatherbeaten jalopy seems unbearably shabby thereafter.

In the same way, after one has played a large, versatile instrument, it is hard to settle for anything less grand.

I should not be so foolish as to deny that, all else being equal, a large pipe-organ is better than a small one. The six-manual Wanamaker organ is admittedly a more flexible, versatile and expressive musical instrument than a parlor reed-organ pumped by the player's feet. At the same time, a student who is reduced to practicing on a three-manual or even two-manual instrument need not feel that he is underprivileged.

Such students would be interested to learn that a great many of today's most famous organists do their practicing on small organs, electric or electronic, for the excellent reason that these instruments are compact, relatively low-priced, and offer an inexhaustible variety of tonal combinations. They are for the most part two-manual instruments.

Recently I had occasion to spend considerable time at the console of a small two-manual organ designed by Ernest White, with the cooperation of G. Donald Harrison, and built by Aeolian-Skinner. I found it a striking example of what can be accomplished despite apparently severe restrictions in size.

In studying the specifications (see next column), it is at once apparent that there are no frills. All the essentials are present, however; Mr. White has seen to that. Moreover, in performance the organ is more effective than many an instrument of much more elaborate specifications, because it is well installed.

In this Aeolian-Skinner installation, the church committee has adopted the common-sense if slightly revolutionary plan of putting the organ in the church, where it can be heard, rather than in a small room where it can't be heard. The Great is placed in the transept itself. The Swell is installed in a shallow recess along the south wall of the transept, and instead of the usual shutters approximately the size of a dormer window, through which the tone is expected to force its way, the whole side of the wall is taken up by the shutter openings. The ceiling of the church is high, and there is ample opportunity for the pipes to speak.

The specifications of this organ suggest a Classical instrument best suited to trio sonatas and other works of the pre-Bach masters; but in practice almost anything can be played on it. The organ is adequate for every need of the service. There is plenty of variety in the soft stops for Communion services. The instrument also offers

abundant color contrasts for accompanying the Canticles, Psalter and anthems, as well as oratorios done at this church.

It is a tribute to the builder's skill that every stop counts, both individually and collectively. There is not a pipe in the organ that does not have a chance to speak and be heard in the church. The warm strings and clear flutes are expressive as solo stops; the full organ has power and brilliance.

Not all small instruments are as well planned and executed as this one. There are many two-manual instruments on which the builders have economized at every turn, with a consequent sacrifice of effectiveness. Even a mediocre instrument, however, can be made to sound better by an experienced and resourceful organist.

All of us tend to get in a rut at times, to take for granted the materials at our disposal, and to feel we might do better work if only we had a better instrument. In such a case we might recall the old proverb, "A bad carpenter always complains of his tools." Instead of sighing for a magnificent four-manual concert model with all the latest gadgets, it is perhaps pertinent to ask ourselves whether we are getting the most out of the pipe-organ we already have. A controversial bowing in the Bruch Concerto

Not long ago a friend of mine showed me a copy of Bruch's G Minor Concerto with your markings on it. He had them, he said, from a former student of yours... I liked your bowings and fingerings very much, but there was one bowing I did not understand—that for the leading phrase in the first movement. (See Ex. 1.)

Why do you use this bowing? Every edition I have ever seen begins on the Up bow. I know you must have a good reason for it, but I should like to know what the reason is. —A. C. R., California

My feeling is that both sustained half-notes in the second measure must be fully sustained. If the phrase is begun with an Up bow, one cannot avoid playing the first half-note as a dotted quarter-note followed by an eighth rest, for the four-part chord must certainly be taken Down bow. To my mind, this break between the two half-notes detracts from the strength and the breadth of the passage.

I'll admit that the bowing I prefer is not quite so easy to perform as the other bowing. But the ultimate musical effect must always take precedence over mere technical ease. The difficulty in my bowing

is only that of sharply accenting and detaching the sixteenth note. This skill can be attained by a very little concentrated practice.

While we are discussing this phrase, it might be as well to point out that the chord must not be broadly spread. It should not be played as if it were written as in Ex. 2. The four notes must be taken as closely together as possible, so that the sustained

effect may be maintained. The best way to play the measure is the following, with the understanding that the grace-note chord is pushed as closely as possible to the half-

notes. (See Ex. 3.)

If you will keep these thoughts in mind and experiment a few times with the two bowings, I think you will agree that my bowing brings out more completely the strength inherent in the phrase.

How to read notation for part-playing

Will you kindly tell me how the following measures—59 (Ex. A) and 77 (Ex. B)—from the 24th study of Gaviniès should be played? It seems impossible in Ex. A

to sustain the G, the F, and the B flat simultaneously. The F is surely the melodic line; then why are the G and B flat written as half-notes? In Ex. B is the half-note E supposed to be sustained while one plays the G and the lower E? And why is it so many artists play the Bach Sonatas in so many different ways? —T. W., New Jersey

When involved in the complexities of part-playing, one soon realizes what an inadequate system of notation we have. This accounts in some measure for the varied interpretations of the Bach Solo Sonatas: there are movements in which many passages cannot be played exactly as written, nor were they ever intended to be. If a real effort were made to convey in print an exact interpretation of the G minor Fugue, for example, the result would be such a welter of eighth and sixteenth rests, and of short tail-hooks, that the notes themselves would be obscured. Therefore, certain conventions have arisen and are observed.

In the first example you quote, the B flat must actually be played slightly shorter

than the F, in order that the listener should not hear the melodic line as in Ex. C.

The chord could be written as in Ex. D, but you will agree, I'm sure, that if all such chords in the study were so written it would be much harder to read.

The chord C, E, B flat, on the third beat of your first example, could be written and should be played as in Ex. E. But this

gives the eye a great deal more to do than is required by the conventional system.

The first two beats in your second example (Ex. B) should be played exactly as written, the half-note E being sustained first with the E string and then with the D.

As an example of a phrase that cannot well be written as it should be played, take the following (Ex. F) from the G minor Fugue of Bach:

If this is played exactly as written, the ear hears the melodic line as in Ex. G—which is certainly not what Bach intended.

The true melodic line can easily be brought out if the double-stops in Ex. F are carefully played. It merely requires thought and a good control of the bow. For each double-stop in the example, the bow should be slightly firmer on the lower string than on the upper, and the upper note should be slightly shorter than the lower. In other words, though both notes are taken simultaneously, the lower is somewhat sustained while the upper is somewhat staccato. It is an effect more easily demonstrated than described.

A knowledge of part-playing is essential for a good performance of contrapuntal music such as the Fugues and many other movements in the Sonatas and Partitas of Bach, and also for many short passages in other solos. In its simplest form, which we have been discussing, it can be thoroughly studied in the 42nd etude of Krutetzer. THE END

Adventures of a piano teacher

PART THREE

... Let Toscanini sing with the
music—Pianists should stick to piano-playing

By GUY MAIER

STUDENTS SHOULD BE CAUTIONED not to sing or hum as they practice. It's a bad habit; for, no matter how relaxed they may seem to be, this sets up an unconscious tenseness—two sets of sensitive muscles, fingers and vocal mechanism, striving to express the emotional meaning of the same melodic line. It's difficult enough to realize the music's content via one set of complex physical co-ordinations!

Furthermore, when a pianist sings along as he plays, his emotion tends to be released through his voice. He feels and sings his effects but unfortunately they don't emerge through his fingers. Players should often sing phrases or melodic lines of course but it is better to do this away from the piano.

"But what about Toscanini?" Somebody is sure to ask, "Isn't he supposed to sing constantly as he conducts?" Yes, I am told he does. But remember, the Maestro is not playing any one of those tricky orchestral instruments himself—he's just inspiring his men to do that for him! The men, alas, have quite enough to worry about without indulging their emotions vocally. They leave that until after the rehearsal!

So, let us pianists sing exclusively from our hearts through our fingers.

SWING LOW SWEET PIANO

The ancient and grizzled little waiter had served me silently for five days while I made the Atlanta hotel my headquarters during a teaching and concert tour. At the last breakfast the old fellow shuffled over

close to me, and in a deep, hesitant voice began, "Pa'don me suh, but are you the mewsic man that played last night?" I grunted. "Ah just wanted to talk with you a little," he continued shyly. "Ah's studyin' mewsic, too."

Astonished, I asked him, how come?

"Well suh, from readin' the Good Book, Ah figured that just about the only thing we got down here on earth that they have up in Heaven is mewsic. So I begun to take piano lessons a few months back, so's not to feel too strange when I got there. I can play real good "When the Roll is Called up Yonder" and "Shall We Gather at the River?" Now I'm practicin' "Swing Low Sweet Chariot" and hope to learn it good, too — —". Before I could reply, he had faded away.

Six months later I returned to Atlanta. The old waiter was gone. I'm sure his chariot had a piano in it as it drifted down to carry him home. How the Pearly Gates must have rung as he rolled through, with all the cherubims and seraphims chorusing, "When the Roll is called up Yonder," and the new angel, already happily at home, answering back with his mewsic, "I'll Be There!"

CONCERT ARRANGEMENTS OF WALTZES

Look out when you play or teach any of those sizzling concert arrangements of waltz-sets. Most of them foam, fizz and boil so long that the waltzes themselves are boiled out. Godowsky's are by far the

hardest and most unrewarding but look out also for all the others, even the less pretentious ones like those by Gruenfeld. The secret of playing such paraphrases and transcriptions effectively and alluringly is never to lose the basic waltz swing and tune. Change the overall waltz speeds as little as possible by holding on to the same tempo as long as you can, in spite of ornamentation and flamboyance. (Most "concert" waltzes are far too fluffed up, anyhow.) If members of the audience can always hear the waltz theme and feel the lift, lilt and dip of the rhythm they will love your waltzes. Otherwise they will prefer them in their unadorned form.

Years ago in Berlin, Vladimir Horowitz discovered on my piano a simple unarranged potpourri of waltzes from Strauss' "Rosenkavalier", which I planned to turn into one of these "concert transcription" desecrations. "But they are so perfect as they are!" said Horowitz as he looked them over. "If I were to play these in public I would not change or add a single note."

That prevented me from mutilating these masterpieces. Has anyone else tried his hand on them? I hope not!

CYRIL SCOTT'S "LENTO"

This week, in my intermediate piano class, a piece that I have not heard or taught for many years was played—Cyril Scott's "Lento", one of his "Pierrot" pieces. Its freshness and charm are still undimmed. I wonder why we have dropped it, when it has such appeal to sentimental young people. Perhaps, alas, the youth of this day are no longer romantic. I like to think of its first measure like this:

and the next measure's extension of it:

I hope teachers will rediscover the Lento's usefulness as a big, luscious, stretching chord piece for adolescents, and as a sure-fire developer of warm, ardent phrasing for timid young people.

THE END

De Camptown Races

No. 430-40139

This transcription of an old favorite song is a brilliant, effective recital number. It is an excellent study in chord playing and execution of rapid passages. Beginning with Measure 27, emphasize the melody, played by the right thumb, while playing the upper voice as quietly and evenly as possible. Players with small hands may have difficulty with the big chords of the final section, which should be played as percussively as possible. Grade 5.

Palos Verdes

The Green Cliffs of California

No. 130-41052

This is a study in alternation of staccato and legato touch, with the former predominating. Interpretatively it poses the problem of securing contrast in its four sections. Observe tempo indications carefully in the transition from the opening section to the passage in D-flat. An organ-like sonority should be sought for in the 16-measure passage in E major, and the closing section should be played brilliantly, at top speed. Grade 4.

Solo for Clarinet in B \flat with Piano Accompaniment

GEORGE FREDERIC HANDEL

Arr. by Angel del Busto

Tempo di Menuetto (Moderato $\text{♩} = 126$)

The musical score is written for three parts: Clarinet, Piano, and Trio. The key signature is one flat (B-flat) and the time signature is 3/4. The score is divided into three main sections: Clarinet and Piano, Trio, and a final Trio section. The Clarinet part begins with a *p* (piano) dynamic and features a melodic line with trills. The Piano part provides harmonic support with chords and moving lines. The Trio section introduces a new melodic theme for the Trio, marked with a *p* dynamic and a *cresc.* (crescendo) marking. The score concludes with a *Fine* marking and a *ritardando* instruction.

Moderato giocoso (♩ = 84)

THE WORLD OF

Music

Charles Munch and the Boston Symphony Orchestra played an all-French program honoring Vincent Auriol, President of France, during M. Auriol's visit to Washington, in Constitution Hall last month . . . Artur Rodzinski, back from a tour of 18 concerts in Italy, has just completed guest-conducting assignments with the Los Angeles Philharmonic and Les Concerts Symphoniques of Montreal.

Rudolf Firkušny, pianist, plays in Zurich and Athens next month as highlights of his fourth postwar tour of Europe . . . Serge Koussevitzky will lead a performance of Tchaikovsky's "Pique Dame" at the Berkshire Music Festival on July 30 . . . The New York Philharmonic-Symphony, conducted by Bruno Walter and Dimitri Mitropoulos, with Robert Casadesus, Zino Francescatti, Myra Hess, Rudolf Serkin and Solomon as soloists, heads the list of orchestral attractions at the Edinburgh Festival this summer.

Claudio Arrau, pianist, will be heard for the first time in Israel next month when he tours the country under the auspices of the Israel Philharmonic . . . Dr. Howard Hanson, com-

poser and director of the Eastman School, last month received the honorary degree of LL. D. (his 13th) from the College of the Pacific . . . Four concerts of American music will be presented by the New England Conservatory on April 24, April 27, May 1 and May 2 as part of the school's current American Music Festival . . .

The film version of Gian-Carlo Menotti's "The Medium," featuring Marie Powers and Leo Coleman of the original Broadway cast, and the 14-year-old Italian coloratura, Anna Maria Alberghetti, is to be released shortly. The filming took place in Rome, under Mr. Menotti's direction. The movie "Medium" is performed in English.

Washington station WTTG currently offers on television a series of film concerts by the Vienna Philharmonic Orchestra. Concerts were originally filmed in Vienna and Salzburg . . . Temple University this summer will again offer an all-expense 35-day tour of European summer music festivals. Total cost of the tour, which leaves Philadelphia July 28, is \$987. Those taking the tour will receive six semester hours' credit on graduate or undergraduate levels.

COMPETITIONS (For details, write to sponsors listed)

- 19th biennial Young Artists Auditions in piano, violin, organ, voice. Prizes: \$1,000 each. To be held in March and April, 1951. Sponsor: National Federation of Music Clubs, 455 W. 23rd St., New York 11, N.Y.
- Chamber music or small orchestra work, by composer under 19. Prizes: \$25, \$10. Closing date: April 30, 1951. Sponsor: Jordan College of Music, Indianapolis 2, Ind., att. Mr. William Pelz.
- Choir Photo Contest. Open to non-professional choral groups only. First prize, \$382.50; nine other prizes. Ends June 30, 1951. Sponsor: Choir Guide, 166 W. 48th St., N. Y. C.
- School song, Canyon High School, Canyon, Texas. Prize, \$100. Closing date: May 1, 1951. Song Chairman, Box 899, Canyon, Texas.
- Ballet score commemorating life, exploration of Columbus. Prize, \$1,000. Closing date, June 1, 1951. Sponsor: Columbian Centennial Committee, Genoa, Italy.
- Setting for solo voice of texts from the New Testament. Prizes, \$200. Contest closes June 1, 1951. Sponsor: Avenue of American Art, Box 174-C, Pasadena, California.

PHARYNGEAL VOICE

(Continued from Page 17)

the stroke can result in a thin, medium, or thick line, or even broken paper, according to the "weight" of the thought. Next, try increasing the crescendo to see whether or not the pharyngeal mechanism responds. Some singers have a naturally well-developed mechanism without their ever having worked it consciously.

If the singer will now experiment by singing (on the pitches already named), first with falsetto, carrying the tone right through to the pharyngeal, he or she will experience the sensation that the pharyngeal tone is slightly lower than the falsetto (even as the normal tone is slightly lower than the pharyngeal on the same pitch). If, therefore, a note is attacked falsetto and then with unbroken continuity, developed in depth, or, say, downward to the maximum of its layer (which is very shallow indeed), it will require very little extra downward "pressing" to engage the pharyngeal layer.

I don't want this downward pressing thought to appeal to the brutal streak lying dormant in all humans. No, he feeling is somewhat akin to exerting a carefully controlled downward pressure on a piece of india rubber with, say, the tip of a pencil or match, when you can see and feel the slight depth of rubber engaged; as the pressure is released so the rubber surface is regained. It is as simple as that.

So let the downward pressing be both light and firm. It is, of course, mainly mental. After all, the singer is practically groping in the dark, and the only illumination to reach the laryngeal chamber is that of correct thought.

All singers know, more or less, the feel of the normal voice, produced by the bottom and thickest layer of the vocal cord system. Most female voices experience little or no difficulty in passing into the basic from the pharyngeal, whereas most tenors reveal a lack of muscular continuity resulting in a gap in the tonal stream just as the transition is being made. There will be a break, or a downward and upward slither of the tone. In which case, the remedy is not one of increased breath blast (which the brutal streak in so many singers revels in) but the systematic development with appropriate exercises of the pharyngeal mechanism by itself until absolute muscular continuity on an oil-smooth basis is achieved.

Before attempting to mix the voices the student should make himself thoroughly familiar with the three definite, characteristic tonal sensations accruing from the three mechanisms which form the operational unit we normally call the vocal cords. (Continued on Page 50)

THE CONDUCTOR'S MAGIC

(Continued from page 23)

tongues who had probably never seen Mr. Koussevitzky before, and yet they understood his language instantly because all great conductors speak the same language in movement, no matter where they conduct.

Each performer must know where the downbeat is in the measure so that he can count the measures while he is not performing. There may be 30 measures rest, yet he must come in without hesitation, with perhaps only an encouraging glance from the conductor. The first beat in a measure is always down, no matter what the pulse of the music, whether it be in two, three or four. Two, or the second beat in a measure, is expressed differently in each pulse, and the instant each performer sees the second beat of the conductor he knows the pulse of the music. The up-beat is always the same because it leads to the down beat or to one in the measure, so really about all a conductor has to know about time beating is that one is down, that the second beat in two, three and four pulse differs and that the last beat is always up.

The conclusion, then, is not that a great conductor has a correct pat-

tern for time beating, but that he does not beat time. The only reason the performer must see the beat of the conductor is to know that the measure has begun and on what part of the measure the music starts. Richard Wagner said—and Arturo Toscanini said it again more recently—that the conductor's duty is to keep the pace or tempo.

The first important element in the conductor's responsibility, that of keeping tempo or pace, is often difficult since so many of us tend to think in terms of time, not rhythm. If we try to make our hands or baton go at the pace or speed at which we want the music to move and at the same time demand that the performer watch our movements we make it impossible for him to produce anything but a stiff, angular sound in music.

If we can accept that mood makes correct breathing and correct breathing gives us the pace then we have discovered the secret of movement in sound. I remember that once in a rehearsal with Mr. Toscanini, when we did not sing a certain passage in the tempo or pace he desired, he clasped his hands before his face in

a gesture of prayerful supplication and gave the preparatory beat in such a way that we could not help but breathe for that mood. In the final performance he did the very same thing. I have many times noticed that Mr. Bruno Walter allows his singers to breathe only as he wishes. The result is that his music always glows with an inner feeling of spiritual intensity. A work like Bach's "St. Matthew Passion" speaks with fervor under Mr. Walter's direction because he makes his singers breathe for the mood demanded by the work.

If the conductor is interested in improving his conducting I should suggest that he become conscious of the different kinds of breathing for various moods by the following experiment. Place the thumb of the right hand on the sternum, or breastbone, with the fingertips of the same hand on the abdomen and the left hand on the left side ribs. Then speak the exclamation "Oh!" with quiet longing, with homesickness, with annoyance, with irritation, with amazement, with childlike wonder and with tenderness. With this experiment will come the sudden discovery that each time one speaks he breathes differently. If he aspires to develop as a conductor, I suggest that he repeat this exercise

each day, until he breathes naturally and instinctively for each mood.

Finally, when each member of the choir makes a similar discovery, it is wise to take a passage from an anthem that the choir knows from memory and to sing that passage, portraying different moods. Suddenly like an inspiration, the choir will discover that they are reflecting the same facial expression and instinctively taking the same pace in breathing as the conductor. When this is carried through several phrases, the beginnings of good rhythm are established. Good rhythm begins as a physical response on the part of the performer to the mood and breathing of the conductor. Music does not change with every phrase, but has continuous pace. A good conductor is never erratic in his pace. He finds the pace of a certain passage and relentlessly makes the music hold to it without stopping at bar lines or for vowels or consonants.

The conductor dare not break the attention of the listener by making too sudden a change in pace. Therefore by facial expression he must prepare his choir for a new mood, a new beat and a new pace. Through understanding and constant practice the choir can become a vital means of interpretation. THE END

CONSERVATORY-TRAINED MUSICIANS COMMAND BETTER INCOMES

The highest type of Musical Training by Extension Methods, as developed and perfected by the University Extension Conservatory, is not an experiment, not a make-shift, but has proven its value and soundness in the careers of thousands of musicians and teachers who owe their success entirely to the personalized and painstaking coaching of this great Conservatory. Partial listing of courses below:

CHORAL CONDUCTING:—Brand new course includes all the modern techniques—even radio broadcasting.

NORMAL PIANO:—Especially designed for teachers or future teachers. Treats and solves every problem of the progressive teacher.

ARRANGING:—All the tricks of modern arranging drawn from the experiences of the biggest "name" arrangers in the country.

EAR TRAINING:—Designed to give you the ability to read at sight, to transpose and to transcribe. Invaluable training for vocal or instrumental work.

HARMONY:—Written by two of the finest theorists in the country. Simple, yet thorough in every way. From basic fundamentals right through to Counterpoint and Orchestration.

HISTORY:—A modern course including all types of music from ancient origins to 20th Century. Interesting—with emphasis on the analysis of music—not a dull collection of facts.

PUBLIC SCHOOL MUSIC:—Fits you for actual work in the school room. Our model lessons develop originality and give you an excellent guide for teaching others.

THE PHARYNGEAL VOICE

(Continued from Page 43)

Let us now examine the question of engaging simultaneously the first two mechanisms.

Let the tenor produce and hold, say, a high A flat in falsetto, and without interrupting the tone, deliberately seek, and will in the pharyngeal with little breath pressure, employing an open EH (as in *there*) for the falsetto, and a very closed, flat *eh* (as in *pet*, and almost approaching the vowel sound in *pit*). As he makes this transition from falsetto to pharyngeal he definitely feels a certain amount of tension-resistance coming in. Should the full tension of the pharyngeal be brought into play, it means that the cords have approximated to their maximum, leaving only a thin razor-edge slit between them. (N.B. The vocal cords must *never* touch during phonation; and this is why the beautiful to-and-fro vibratory motion of the cords must be left unimpeded by that brutal form of tonal attack labelled *coup de glotte* which causes the cords to collide with violence and is productive in the long run of corns or nodes). If, on the other hand, the singer "wills in" 25, 50, or 75 per cent tension for the pharyngeal, then the cords will not come together completely, and consequently 75, 50, or 25 per cent of falsetto remains. The net result in every case is the simultaneous functioning of the two mechanisms producing a mixed tone (*voce mista*).

The next experiment for our tenor is to engage *only* the pharyngeal (with the aid of a very closed *eh* vowel sound, as stated above); and be sure that he gets the feeling of a very light, thin, flexibly taut tonal line. He can make a slight crescendo, to feel his way, so to speak, and then, if he wishes to introduce a percentage of falsetto and thereby create a mixed tone, all he has to do, while still holding the tone, is to *lift up* the tone (this is quite mental, of course) and release somewhat the pharyngeal tension; he can now "will in" the required percentage of falsetto. If, still holding the note, he wishes to eliminate all falsetto, he may simply press downward slightly (mainly a downward thought followed by appropriate physical reaction). He will again experience the sensation of a fine, flexible firm tonal line. Let him now take breath, if he requires it, and produce a *pure* pharyngeal note on the same pitch A flat; then let him seek and "will in" a little more depth of tonal line, which he may secure by a *slight* well-controlled downward pressing, mainly mental. Whereupon, a certain percentage of basic or normal voice should appear and so form a mixed tone.

We are assuming, of course, a well-developed pharyngeal in our tenor; without this it is not so easy to dovetail from pharyngeal to basic without a tonal break, slither, or tonal gap. The longer the downward pressing is continued the greater the percentage of the basic mechanism will be engaged. There comes a point, easily felt by the singer, when no more pharyngeal is left and only the basic or normal voice is in operation. Be it noted that the aforesaid downward tonal pressing must be exercised with great care and, in a sense, firm delicacy.

Again, if our tenor is holding a head note purely with the basic mechanism and wishes to make a mixed tone by introducing a certain percentage of pharyngeal, he need merely *lift up the tone* (which is a thought, and *not* a physical act). The reaction to this mental "lifting" is the employment of less basic tone; consequently, some of the pharyngeal voice will come into operation with the basic. If he knows how much to "lift up", he can also introduce a small percentage of falsetto into the tone, and produce a mixed tone of all three mechanisms operating simultaneously. Without considerable exercise, this is not easy for most singers.

The above instructions apply to women's voices as well as to men's, but more particularly to mezzos and contraltos. These latter generally have a well-developed pharyngeal.

(1810-1856)

• Love your instrument, but do not worship it as the finest and most beautiful that exists! Remember that there are other instruments no less beautiful; that in music for orchestra and voices music finds its highest expression.

—Robert Schumann

but they can produce some very fine tones by combining the pharyngeal and basic mechanisms. A woman's pharyngeal tone is never so crude and brittle when produced by itself as a tenor's, and the reason for this is that in women's voices the pharyngeal mechanism is built into the back half of the cords, the "deep" end, mainly responsible for the low and lower medium notes, whereas in men it is built into the front half, the shallow end, wholly responsible for the high or head notes. And that is why the tenor should mix his pharyngeal with small percentages of falsetto to act as a carpet for softening and improving the tone.

teachers

are now planning piano recitals. For the kind of material which will make parents beam with pride and approval, we suggest you examine these delightful, little numbers.

RECITAL NUMBERS GRADES 1 and 2

3936 At Church, G-1	Dvorak
3982 The Big Drum Major, F-1	Hopkins

SING WITH YOUR FINGERS

(Continued from Page 19)

hand has begun to master tonal gradations, proceed in the same manner with the fingers and thumb of the left hand, then practice both hands alternately.

The range of tonal gradations from pianissimo to forte should increase as the control of the finger is developed. Gradations also should be nearly imperceptible. I like to think of a well-controlled crescendo as being like a fine china vase, white at the bottom, deep blue at the top, with the colors blending into one another so imperceptibly that it is impossible to say, "At this point the white ends and the blue begins."

As a result of patient, diligent effort, the line of tonal gradation can be lengthened, and little by little will become smooth, even, and free from irregularities.

Having mastered a single tone played by either hand, we may proceed to the playing of two tones.

Again the hand rests on five consecutive notes—Middle-C, D, E, F, and G. Adopt, as before, a light, relaxed arm position. Place the second and fourth fingers on D and E. Make sure both fingers are precisely balanced, so that the keys can be manipulated with exactly the same finger weight. Play the two notes exactly together, so that they sound as one tone, not in the least varied in quality or volume. Listen attentively to be sure there is no time-lag in the playing of the two notes. Or, as Leschetizsky put it, "Think twice and play once."

Be sure that your fingers deliver the volume of tone, quality of tone and precision of unison which you are hearing in your mind's ear. If you play a percussive forte when you intended to produce a consorous but *mezza-forte* tone, you are not in control of the keyboard.

Such mastery is not gained overnight. Even a skilled pianist often finds it difficult to play, for example, the final chord of a piece as softly as he desires. Sometimes it comes out surprisingly too loud; or the tone may be weak, lifeless, and inaudible in remote parts of the concert hall; or it may be unevenly played. This means the pianist is not getting exactly what he wants.

Only patient, long-continued practice can give the pianist this needed control. Once the basic technique is mastered, as already described, the same principles can be applied to more complex problems of chord-playing.

Chords should be practiced in the following manner: Begin with an even-toned chord, with all tones in the chord played precisely together and with equal volume. Increase the tone gradually from pianissimo to fortissimo, exactly as was done with a single note. Do not allow the tone

to die away between repetitions of the chord. Make sure the hand returns to its original vaulted position after each repetition.

The sounding of all the notes of a chord with absolute evenness is valuable preparation for works in which chords are used principally as the accompaniment to a melody. An example of this is found in Chopin's E-flat Nocturne (see Ex. 1).

A more intricate problem is posed for the interpreter in playing a chord of which one note must sing as the melodic line while the others are subdued. Sometimes this melodic line is in the lowest note of each chord, as in Brahms' C Major Intermezzo, Op. 119, No. 3 (see Ex. 2).

Or it may consist of the top note of each chord, as in Brahms' G Minor Ballade (Ex. 3).

In either case, with diligent prac-

tice one can acquire sufficient control to emphasize or subdue any note of the chord at will. Begin by playing a simple triad, with relaxed arm and vaulted hand-position as before. Emphasize the thumb; then the third finger; finally the fifth finger. As control of tone increases, fingers and thumbs eventually will become "soloists."

Like all techniques derived from the basic laws of physics, the fundamental singing tone here described can be elaborated by every performer to suit his own taste and temperament. Among the great pianists who were pupils of Leschetizsky, no two developed their particular art of piano playing in quite the same way. All of them were identified by the distinctive qualities of their individual genius. The basic principle, however, was, and still remains, the same.

Violin Questions

By HAROLD BERKLEY

GO AHEAD AND STUDY

R. G., Texas. I think you would be well advised to do the studying you have in mind. You are comparatively young yet, young enough certainly to learn and to absorb what you learn. The more you know, the better you will teach, and the wider your influence for good will be in your community. It is obvious from your letter that the latter consideration is foremost in your mind. A man with your background and ideals can do a lot for music. He may never become nationally famous, but fame isn't everything. The knowledge of valuable work well done is equally satisfying. Good luck!

VIOLIN HARMONICS

H. M. C., Florida. About the best, and certainly the most practical book on violin harmonics is that of Rebecca Holmes, "Harmonics in Theory and Practice." There are other and more expensive books, but the Holmes book gives all any intelligent violinist needs to have to perfect his playing of harmonics.

REVERSE FINGERING

R. S. H., New Jersey. Thank you for your letter. Your experience has been shared by many violinists. Most players who were taught to use the open string on ascending and the fourth finger on descending scales have found that their intonation was more secure when they reversed the fingering. And what is more—it sounds better. (2) If you have trouble producing tone on the up bow, I would suggest the following little exercise: Draw tones of about eight seconds' duration to each bow, making a crescendo on the down bow and a diminuendo on the up bow. Conscientiously practiced, this exercise can make a great deal of difference to a violinist's tone production in the course of a very few weeks.

FACTORY-MADE VIOLIN

Mrs. F. R. J., Massachusetts. It is too bad, but I have to tell you that your violin is a factory-made product, probably of German or Bohemian origin. The mark you quote indicates that. It may be worth at most \$100.

GULBRANSEN
Diacron Consoles

FORSTER MUSIC 1010 W. WABASH AVE. CHICAGO

Organ Questions

By FREDERICK PHILLIPS

In our choir we have had some controversy about the pronunciation of the word "Jubilate" in the hymn, "Now on Land and Sea Descending," by Longfellow. Most of the choir we have heard use the Latin "J" like "Y." However, we find Webster gives the regular English pronunciation of the letter "J." Which do you think is in better taste?

—Miss P. M., North Carolina

Strictly speaking the "J" should have the Latin pronunciation as in "Y," and this would probably be required in the Roman Catholic service where Latin predominates, but in other churches more latitude is permitted, and the writer's own preference would be the regular "J" sound, in order to avoid what some might interpret as "highbrow." Very often matters of this sort are settled by a conference with the minister of the individual church. Since, however, it is a Latin word, the "Y" sound would be amply justified from the point of view of correctness. It is largely a matter of choice.

Four years ago I started playing a Hammond organ after playing piano for about 20 years in church work. I have taught myself in part and have had some assistance from an organist in a nearby town. I do not live near a school of music, but would like to study the work such a school would require. Could you give me a list of organ books in graded order, also a graded list of organ solos. I have played "Angelus," by Massenet, and would like music about that grade or a little more difficult. I enjoy practicing and can get in approximately ten hours a week.

—Mrs. F. L. G., Pennsylvania

For your basic studies we would suggest the Stainer "Organ Method" edited by Rogers (for pipe organ). If you have an electronic organ at your disposal, use this same method adapted by Hallett, known as "Hammond Organ" by Stainer-Hallett. This will give you the foundational requirements. Along with the Stainer you could use the Whiting "24 Progressive Studies," and a little later Sheppard's "Pedal Scale Studies." Then we suggest "Master Studies," Carl; "Eight Short Preludes and Fugues," Bach; "Organ Student's Bach," Rogers; "Forty-four Pedal Studies," by Schneider, Op. 48. The

following collections are recommended in the order named from the standpoint of difficulty, though most of them are somewhat general and scattered in grade: "At the Console," Felton; "Organ Melodies," Landon; "Organ Player," Orem; "Ecclesiae Organum," Carl; "Thirty Preludes," Clough-Leigher; "Eighteen Choral Preludes," Bach; Mendelssohn's Organ Works.

Can you give me any suggestions for obtaining an organ in a small country church? Also means of obtaining money, cost, dedication services, discounts, etc.?

—H. S.

We suggest first that you contact three or four organ manufacturers who will be glad to have a representative talk over with you the type of organ best suited to your requirements, and the approximate cost. We are sending you the names of several responsible manufacturers of pipe organs, and we feel sure that any of them will be perfectly honest and fair in their recommendations. It may be that in your circumstances an electronic organ would be more satisfactory, and we are therefore sending also a list of makers of these instruments. You alone can decide which will give best results, and we therefore suggest that close attention be given to the tests that each will offer, bearing in mind the size of your building and congregation and the acoustic conditions. As to financing the purchase, we have always believed that the direct way is the best way—that is, let every member of the congregation pledge a certain amount per week or month till the necessary amount is raised. Sometimes individual organizations of the church, including choir and Bible School classes assume responsibility for certain amounts, and devise their own means of raising these amounts. The dedication services would consist of an ordinary festive service with special stress on the musical phase of church worship, including a couple of special praise anthems, a sermon suited to such an occasion, and an organ recital comprising six or more numbers, designed in part at least to demonstrate the characteristics of the instrument. Frequently a guest organist is brought in for such a recital, and the makers will be only too glad to assist in procuring such an artist. Usually organ prices are not subject to discounts.

ABOVE: Home Model Hammond Organ, used in more homes than any other organ. Hammond Organ prices start at \$1285* for the Spinnet Model (not illustrated above).

Ever count the cost of not owning one?

SOME THINGS IN LIFE, because of the sheer pleasure they give, cost more not to own than to own.

The Hammond Organ, for example. Here's an idea of what you are missing if you have been putting off buying one:

The thrill and the relaxation of creating your own music on the Hammond Organ.

From the quiet voices of strings to the bold song of brasses, all the great sounds are yours to command.

And this is more than music: it is a way to relax, to forget you ever had a worry.

The pride of playing

It's just plain good for your ego to command an instrument like this.

But you needn't know music now. Yet in less than a month you can learn to play simple music on the Hammond Organ. Thousands have done it.

A richer family life

This is a special Hammond Organ dividend: shared family fun.

For this instrument can arouse your children's interest in music. It can give you and your wife a talent for leisure hours.

The pride of possession

In your living room the Hammond Organ says fine things for your way of life.

Yet your home can be modest; large or small, you'll find a model of the Hammond Organ to fit it. There is no installation; you plug the Hammond Organ into an electrical outlet and it's ready to play.

Prices start at \$1285,* and the down payment can be modest. Maintenance costs are negligible. This is the only organ in the world that never needs tuning!

Go ahead: count the cost

Weigh what you give against what you get when you own a Hammond Organ, the world's most widely used organ in homes and churches. Have a no-obligation demonstration at your dealer's.

Then, ask yourself if you can afford not to own one. The coupon will bring you additional information.

PRICES START AT JUST \$1285* FOR THE SPINET MODEL

WHO KNOWS the ANSWERS?

(Keep score: One hundred is perfect)

1. What instrument uses colored strings? (20 points)

2. Was Palestrina an Italian, Sicilian or Spaniard? (10 points)
3. What is meant by the word cadenza? (10 points)
4. What is the name of Gounod's famous opera? (10 points)
5. What are the letter names of

- the dominant-seventh triad in the key of B? (5 points)
6. Which of the following words relate to music: theme, theorem, theory, triad, trident, trio, triplet, triplicate? (5 points)
7. If a major scale has four sharps in its signature, how many sharps are in the signature of its relative minor? (10 points)
8. How many thirty-second notes would be required to fill a measure in six-eight time? (5 points)
9. What name is given to the sixth degree of a scale? (15 points)
10. Which composer's picture appears with this quiz? (5 points)

(Answers on next page)

THE CLEAN-UP FAIRIES

By Marion Benson Matthews

AFTER THE Smith family had gone to bed and the house was quiet, the Clean-up Fairies of Music Land floated out of their hiding places.

"Dear me," sighed Fairy A. "I hope the children didn't lose many notes today. I have a headache and I really do not feel like working very hard."

"Well, the Smith children are usually careful to put every note in its proper place when they practice," commented Fairy G, "but I must admit I am not very optimistic tonight. The youngsters were in such a hurry to get to Jane Ellen's party, you know, they DID race through their practicing."

"Yes," said Fairy D, thoughtfully. "Have you noticed that when they allow themselves plenty of time, we have very little clean-up work to do afterwards? It's always when they put off their practicing until the last minute that we have a busy night."

One of the Tunes

"That's true," agreed Fairy E, who was peering beneath the piano. "Aha! Here's one of my own notes, an E, which Rena must have dropped when she was playing 'The Happy Farmer'."

"And here's one of mine!" exclaimed Fairy A. "Bob must have lost this A when he was racing through his violin scales."

"This D must have been dropped by Bob, too," said Fairy D. "It's right under his music stand."

"My, my!" mourned Fairy C. "Here are TWO of my notes. I suppose Davy must have lost those. Did you ever hear him finish his cornet practice so fast? It made me quite nervous."

"Will you please hand me that G?" asked Fairy G. "That must

Another Tune

have been one of Davy's, too, as it is beside your C's."

"Here is a B under the piano bench," murmured shy little Fairy B, who had not spoken before.

"And an F behind the bookcase," added Fairy F. "I just can't understand how it got into such a queer place."

"What makes me sad is that all these perfectly good notes were absolutely wasted," remarked Fairy C. "It really is a great pity."

"Yes, it is. But Why can't WE do something with them?" asked Fairy F. "I don't see why they should be thrown away just because the pupils were careless with them."

"That's a good idea!" exclaimed Fairy A. "Now let's see. We have found eight notes, one for each note in the octave. That should be enough for a little melody. Let's see what we can do with them."

So the Clean-up Fairies arranged and re-arranged the lost notes until they had composed the two little melodies given above.

How many melodies can YOU make with these same notes? No note may be used twice except C.

SOLDIERS' MARCH

March, march, march,
Go soldiers down the street;
Their step is firm,
Their line is straight,
They keep a steady beat.

March, march, march,
My scales go marching, too;
My tone is firm,
My fingers curved,
Do I like scales? I DO.

Drawn by Harvey Peck

Junior Etude Contest

Junior Etude will award three attractive prizes each month for the neatest and best stories or essays and for answers to puzzles. Contest is open to all boys and girls under eighteen years of age.

Class A—15 to 18; Class B—12 to 15; Class C—under 12. Names of prize winners will appear on this page in a future issue of the ETUDE. The thirty next best contributors will receive honorable mention.

Put your name, age and class in which you enter on upper left corner of your paper and put your address on upper right corner of your paper. Write on one side of paper only. Do not use typewriters and do not have anyone copy your work for you.

No essay this month. Puzzle appears below. Contest closes the first of May.

★ LETTERS ★

Send replies to Letters on this page in care of Junior Etude, and they will be forwarded to the writers.

Dear Junior Etude:

... I take lessons on the 'cello and play in the Queensland Symphony Orchestra. I would like to hear from string players.

Jennifer Chenery (Age 12), Australia

I play viola in High School ensemble and my main ambition lies in the orchestral field. In summer I help our director teach viola which is an enjoyable experience. Would like to hear from others interested in orchestra.

Carol Schuler (Age 16), Pennsylvania

Dear Junior Etude:

Our music club is called Piano Pals. At our meetings we have business, some solos played by members, musical games and then refreshments. We have a lot of fun and increase our knowledge and appreciation of music at the same time. We are enclosing a picture of our club. (Not all the members are present).

Jimmy Woodall, secretary, Georgia

Piano Pals, Atlanta, Georgia

Susan Hutchinson, Sondra Bennet, William Kelly, Sadie Anna Hundsmann, Anita Raris, Sammy Raris, Patricia Bernhardt, Jimmy Woodall, Tommie Sue Conkle, Yvonne Mitchem, Jacqueline Boling, Suzanne Barret, Virginia Joiner, Judy Barret, Jean Moore, Sandra Slate, Martha Cantrell.

Once a week we have a club meeting where we discuss different subjects relating to music. We have two teams, represented by royal blue and gold. The team that wins the contest has its colors on the honor roll. We have scrap books and in them we put pictures of composers and other things relating to music. Sometimes we have parties.

Barbara Bodensadt (Age 9)

Antonina Eterno (Age 10), New York

I like the Junior Etude very much, especially the Quizzes. I would like to hear from anyone interested in music of any kind. I take piano and am also hoping to take organ lessons.

Christopher Ward (Age 12), Penna.

... I have been taking music lessons about five years and all my friends take it, too. I would like to have some one write to me.

Carol Stripling (Age 11), Texas

Fence-Rail Puzzle

MOVE THE WORD "note" down the fence-rails to form the word "tune", by changing only one letter in each move. Each

change must spell a real word. Neatness will count in your answers.

★ Answers to Who Knows

1. The harp. The C strings are red and the F strings are blue, to help the performer keep his hands over the proper strings; 2. Italian; 3. a brilliant solo passage, usually in concertos; 4. Faust; 5. F-sharp, A-sharp, C-sharp, E; 6. theme, theory, triad, trio, triplet; 7. four, the same ones; 8. twenty-four; 9. submediant; 10. Gluck.

HOW TO TEACH ADULT BEGINNERS

(Continued from Page 14)

was a real struggle.

Tom had never become too facile with scales; but he soon developed a powerful, sonorous tone. After a year's study he was able to play the Chopin Prelude in C Minor on a recital program. Tom recently told me that piano means a lot to him; I hope he will go on liking it.

Many beginners are timid at the first lesson. Mrs. Foster said she could hardly muster courage to knock at my door. What would I think of a woman in her sixties expecting to get those old creaky joints in working order? I told her there was every reason to expect we could get them in working order; and that is just what we did.

The important thing in working with rank beginners is not to discourage them. Don't make the lesson an inquisition. At the same time, don't coddle students. Make them understand that if they are to progress they must do the work themselves. The study of piano, like many other things appears tedious and difficult. Statistics show that 90 per cent of students drop out during the first two years of study. It is our job as teachers to give students the encouragement needed to get them past the difficulty early stages—and at the same time to make sure they really work at their music.

Students who begin piano study after learning another instrument are, of course, a different story. They have a musical foundation to start with. When Dorothy began piano lessons with me, she played trumpet quite well. She knew musical fundamentals and could analyze every chord. Although her coordination at the piano was that of a very early beginner at first, she soon acquired a technical foundation and thereafter made rapid progress.

George was a vocalist. He could read the treble clef like a streak, but what a time we had with the bass! Evelyn, the cellist, showed little interest until I gave her some simple pieces with singing cello-like melodies for the left hand. It is a good idea to give pupils progressively harder material as soon as possible. Duets are good for rhythm and practice in ensemble-playing, and also for sight-reading. This last is essential; and people learn to read only by doing a great deal of sight-reading. Have the student read ahead in his books; assign hymns and selections from other books as sight-reading material.

For singers, violinists, cellists, trumpeters and others accustomed to reading music on a single staff keyboard harmony drill is invaluable. As a rule, this group is in the

habit of thinking in terms of a single melody line rather than chord-wise. Learning all chords in all keys, supplemented by drills for the left hand, will soon work wonders with their sight-reading.

A fascinating problem is that of students who play piano by ear but cannot read music. They can be treated neither as beginners nor as advanced students, since they are far above average in some respects and at a very low level in others. Jack, for example, was extremely musical and had an excellent ear. His hand-position and fingering was for the most part bad, but he often achieved beautiful results with it. His coordination was excellent.

Everything in music had come easily to Jack, and he expected that learning to read would be easy also. In this he was disappointed. We had to start from scratch like any other beginner, and learn slowly, one step at a time. For the first time in his life, Jack found it necessary to work at music, and he didn't like it. Tactful persuasion and constant encouragement were necessary to keep him plugging away at staff notation.

Similarly, Jack was not inclined at first to bother about hand position and fingerings. Using his own system, he could play better than many advanced students. Gradually I was able to point out to him that his system had taken him as far as it could go. To make further progress, he would have to master correct fundamentals. Little by little, Jack did master them. Soon he was delighted by the increasing surety of his playing.

All play-by-ear students have adjustments of this sort to make. But in turn they make good students. They have fine ears and a natural feeling for music. Some of my best performers have been students from this category.

Each group of students poses its special problems; each pupil, in fact, is a special problem. But there are general observations which apply to all.

They tend to become discouraged, feeling they are not making progress. Perhaps you have assigned them a piece that is beyond their powers. Having the right teaching material at the right time is all-important. Here is where a knowledge of piano literature is invaluable.

The practice problem is never-ending. What shall we do when Miss Lowe comes to her lesson unprepared? There will always be headaches and club meetings. Adults are just as good as children with excuses. But fortunately, we can appeal to their adult minds in many

ways. We can make them see the necessity for practice. We can show them how to practice, and how to establish a practice routine.

And we must do all these things without letting them seem to be drudgery. Adults bring real enthusiasm to their piano study. It is up to us as teachers to see that they don't lose it.

The person who takes up music study in middle life has many things in his favor. Unlike the young man

working hard to establish himself in his chosen business or profession, the mature person generally has leisure for study and recreation. Housewives are less preoccupied with getting the children off to school. Music study can play a useful part in the enrichment of their lives.

This vast body of potential music-makers is a challenge and an opportunity. We as music teachers should make the most of it. THE END

MUSIC HAS NO SHORTCUTS

(Continued from Page 15)

for control. One of the greatest authorities on bowing was Mozart's father, Leopold. The modern bow came into use in his time, and his treatise on bowing is still good.

Both in playing and in teaching, I find it helpful to concentrate on focusing the bow on the string on which one plays. Angle of focus is aided by the proper angling of the elbow. Jointly, your arm and your elbow should round a complete arc. Thus, as you approach the lower strings, your elbow comes up to complement the intention of the string and keep the arc balanced.

Whatever technical aids you employ, make up your mind that the bow will not yield up its secrets in a month or a year. You build bowing over a long period of trial and error; you may even get into tormenting periods of retrogression! Then you go back and begin afresh with fundamentals, remembering it's continuous practicing that counts. Three hours of practice each day, every day, regardless of your mood, is better than an "inspired" eight hours one day and none the next.

In moments of impatience or discouragement, remember the future values of the long pull. No teacher, no method, can get you ahead faster than your powers allow you to go. The test of a career is what goes on after 35; the unhurried continuity of one's start determines whether that is to be steady progress or a sudden bogging-down.

Another point that can cause trouble is intonation. Purity of pitch depends first of all on inborn alertness of ear. Being inborn, this can be developed but not created. If the ear is good, intonation is best perfected through practicing scales.

A beautiful violin scale is the best

test of a player's ability. If your scale is consistently pure in tone, you'll have no trouble with the intonation of passage work. If passage work is out of tune, go back and practice scales. When I was 14, I went through two weeks during which Kneisel kept me on absolutely nothing but the C-major scale. At the time, it was agonizing; today I can't thank him enough.

A third problem that interests students is the vibrato. Like ear-accuracy, its quality comes from within and remains an intensely personal thing. Once its mechanics have been developed, the secret is not to abuse it.

The vibrato is legitimately a means of emotional expression and should never be used where the intention of the music does not require it. You must develop a slow vibrato, a fast one, a middling one. You must also be able to play without any vibrato. Think of the vibrato as an interpretative device, never a mechanical one. Keep it to mirror your feelings. Don't be tempted to "turn it on" as an indiscriminate trick to get richer tone.

It cannot be sufficiently stressed that the popular conception of making technique synonymous with a fast left hand is quite false. The left hand must be adequately developed (through scales, exercises, and studies—not just some, but all of them) to meet the demands of the music. But the right hand gives life to the music—also to the performer's career. A slower, more realistic background of study will bring this home to you, partly by putting skilled control into your hands, partly by clarifying the difference between the short-cut and the long pull. THE END

A Brilliant Violin for The Talented Student

WILKANOWSKI

CELEBRATED VIOLIN MAKER

These classic violins are the master craftsmanship of Mr. W. Wilkanowski, one of America's greatest living luthiers. As a result of Mr. Wilkanowski's painstaking artistry the violinist has available an instrument of long lasting beauty and brilliant tonal qualities. For the professional violinist or the talented student seeking a really fine instrument there can be no finer choice than a WILKANOWSKI.

A SUPERB VIOLIN

The Wilkanowski "Conservatory Model" is a slender graceful model with well arched body, producing a smooth, rich tone. The sides, back, neck and scroll are old curly maple of pronounced flame; the top is fine old spruce of close even grain. Fine ebony fingerboard, rosewood tailpiece, with hand carved cocobola pegs.

THE CASE - "Streamline" model with sturdy laminated veneer body, covered with simulated leather in lizard grain. Plush lining; silk bow ribbons; solid brass hardware. THE BOW is genuine Pernambuco wood stick well balanced with full lined ebony frog. ACCESSORIES include an extra set of tested artist-quality strings; mute; chin rest and E-string adjuster.

Teacher's Roundtable

MAURICE DUMESNIL, Mus. Doc., advises readers on playing tied pedal point notes and on teaching pupils correct playing of fugues.

ENJOYS RHYTHM

The pupil to whom I gave "The little Nigar" by Debussy enjoyed it so much that I am wondering if you can suggest several other pieces of about the same type and grade, also a little more difficult.

—(Mrs.) E. D. H., Indiana.

I recommend the following: "Tickling Toes," by Florence B. Price (slightly easier); "Strumming the Banjo" (also slightly easier) and "Jolly Minstrel," both by Evangeline Lehman; "Juba Dance," by R. Nathaniel Dett. Then, more difficult: "Golliwogg's Cake Walk," and "General Lavine, Eccentric . . .," both by Debussy; Three Preludes, by George Gershwin. All these are pleasing pieces.

WATCH YOUR PRONUNCIATION!

Besides the fact that many music appreciation teachers speak way above the heads of their young pupils, they often fail to pronounce their words clearly. For instance, this happened recently in an elementary school:

Preparatory to a Children's Concert by the local symphony, the teacher lectures on various instruments. Of the clarinet, she says that it is usually "made of ebony in parts for convenience." A short quiz follows:

"Who can tell me something about the clarinet?"

A little boy's hand shoots up: "It's made of a bone, in parts for convents."

Next question:

"Who was called 'The March King' and wrote 'Stars and Stripes Forever'?"

This time a little girl answers: "Susan. John Philip Susan."

AWKWARD POSITIONS

In the Bach two part Invention, No. 2, there are some measures which cause my students a lot of trouble on account of the awkward position of the hands which have to play within the same octave, conflicting with one another.

Have you any suggestions for the performance of these passages? I would appreciate it very much.

—(Mrs.) H. L. W., Vermont

Of course Bach's "Inventions" were written for harpsichord, and the passages you mention presented no difficulty since they could be played on two manuals. For our modern pianos, however, there is a solution: Emanuel Moor, the Hungarian composer and inventor of the double-keyboard piano, was a great Bach scholar. For such cases he recommended shifting the right hand one octave up. This can be done musically and not merely on the few beats involved. For instance, transpose bars 13 and 14 as follows:

Then bars 17, 18 and half of 19 in the same manner:

The difficulty is thus eliminated, and the beauty of the music remains unimpaired. This method is in line not only with harpsichord style, but with organ transcriptions. Moor used it extensively in his admirable arrangements of the Fugues in A Minor, D Major, C Minor, G Minor, and E Minor which, though little known, are the most faithful and effective ones to date.

Questions and Answers

Conducted by KARL W. GEHRKENS, Mus. Doc.,
Music Editor, Webster's New International Dictionary,
and Prof. ROBERT A. MELCHER, Oberlin College

JUST WHAT DOES D.C. MEAN?

In a piece with an introduction, does a D. C. mean to begin at the beginning of the introduction or at the beginning of the main theme? I am thinking especially of the march called "Under the Double Eagle."

—Miss L. W., Nebraska

Theoretically, the direction *Da Capo* (abbreviated D. C.) means that you are to repeat from the beginning. If the repeated part is to begin after the introduction the direction *Dal Segno* (D. S.) meaning "from the sign" should be used, a "sign" then indicating exactly where the repeated part is to begin. But in actual practice composers—and even editors—are often careless about such matters, and I myself have seen many compositions in which D. C. is used in cases where the introduction is clearly not intended to be repeated. I do not happen to have a copy of the composition you mention, but I am guessing that it is one in which the repeat begins after the introduction.

When in doubt about any such matter, use your musical judgment and do what sounds best.

—K. G.

WITH WHAT GRADE SHALL I RESUME?

When I stopped taking lessons several years ago the music that I was playing was about fourth-grade in difficulty. I continue to read ETUDE, and I wish you would tell me what grade music I might begin when I resume piano practice.

—E. T., Connecticut

In general it is advisable to go back to music that is considerably easier than that which you were playing when you stopped lessons. So begin work at material of second-grade difficulty rather than where you left off. This will give you a chance to discipline yourself to read the score with absolute accuracy, to require yourself to see and observe every single detail, including words and signs relating to tempo and dynamics,

fingerings, and pedal markings.

Of course your progress should be much more rapid this "second time over," and I do not mean that you are to go back to second-grade music and then take two years to reach fourth-grade music. But even though you spend only a few months on second-grade material and a few more on third-grade, I nevertheless believe that you will learn so many things you missed the first time that the experience will be enormously valuable to you. But don't wait too long to get started again—one loses one's playing ability very rapidly in these earlier stages.

—K. G.

ABOUT THE SABER DANCE

Will you please give us some information about the "Saber Dance," its story, origin, and so forth?

—S. M. C., Pennsylvania

The "Saber Dance" is taken from the ballet "Gayne" by the contemporary composer, Aram Khachaturian. The story of the ballet deals with cotton pickers on a collective farm in Armenia. One of the characters, the husband of Gayne, is found to be a traitor. He sets fire to some bales of cotton, and seizes his own child as a hostage. As Gayne tries to rescue the child, she is stabbed. She is saved and her villain husband is dispatched by the timely arrival of a Red Army border patrol headed by Kazakov. The second act of the ballet depicts the celebration of the betrothal of Gayne and her rescuer. During this scene members of the collective farm perform characteristic dances of their several regions, one of these being the "Saber Dance."

Certain portions of the music of this ballet have been made into a suite, and have been played rather widely on symphony programs. The "Saber Dance" has even been transformed into a popular version.

—R. A. M.

PROTECT YOUR SHEET MUSIC

In a handsome TONKabinet. You'll keep it neat, clean, orderly, safe and easy to find. Special drawer-trays for easy filing almost hand you the music you want. Richly styled; finely crafted.

Style 606 shown is end table height for dual utility. Holds 350 sheets. Write for dealer's name and pictures of other styles for homes, schools, bands. TONK Mfg. Co., 1912 N. Magnolia Ave., Chicago 14.

TONKabinets for Sheet Music

MANUFLEX is back in MUSIC

NOTE: For some time, Manuflex advertising has been concentrated in the field of medicine. In nearly every part of the United States and in many European countries, Manuflex is helping the handicapped to regain the use of crippled hands and fingers. Manuflex is installed in more than 75 public and government rehabilitation clinics. I am highly gratified at the recognition accorded Manuflex as a factor in the relief of human suffering.—Rex Underwood.

ALL-TIME GREAT FRITZ KREISLER realized years ago the potential benefits of MANUFLEX to pianists and violinists. He shrewdly pointed out the fallacy of wasting precious time on practice for flexibility, when, as he wrote, "Through the application of Mr. Underwood's Manuflex this flexible condition can be brought about in a few minutes without muscular effort."

Such sensational artists as pianist Firkusny and violinist Spivakovsky are realistic in the matter of technic and advise use of the Manuflex. Our free brochure quotes many famous artists and teachers on the Manuflex.

Pianists - Violinists

See the MANUFLEX...try it...experience the near miracle of almost immediate flexibility. MANUFLEX is scientific—unbelievably efficient and versatile. Adjustments are instantaneous. • Send for free illustrated brochure of the Manuflex in action—or send your check for \$20.00 for a beautiful Manuflex sent postpaid. Use it freely for 5 days and if not satisfied, return it and your money will be refunded.

New Music For April

PIANO SOLOS

- Grade 1**
130-41073 Rain On the Leaves Catherine Ryan Keyser \$3.30
(easy, broken chords, arpeggios, interesting harmony, adults or beginners)
- Grade 2**
110-40151 March of the Scouts Ella Ketterer .30
(boys, rhythm, easy chords)
110-40152 The Merry-go Round Albert De Vito .30
(descriptive of title, humorous, chords, rhythm)
- Grade 2½**
110-40153 Barn Dance Albert De Vito .30
(folk tune, rhythm, scale passages both hands, adults or children)
- Grade 3**
130-41074 On Swan Lake Margaret Wigham .30
(interesting phrasing, chords, pedal, inspires imagination in interpretation, adults or children)
- Grade 3½**
130-41075 Mirror Lake Olive Dungan .40
(melodious, colorful harmony, phrasing, chords, pedal)
- Grade 4**
110-40089 In the Spring Breeze Donald Lee Moore .35
(nostalgic waltz, graceful phrasing, arpeggios L.H., recital)
110-40093 Moon Over Madrid Ralph Federer .40
(tango, interesting changes of keys, chords, octaves)
110-40107 Over the Waters O. Scheldrup Oberg .30
(Tuneful piece in Barcarolle style, chords, pedal)
110-40154 Virginia Square Dance Charles Miller .40
(excellent for concert, closing recital piece, extremely pianistic, sounds more difficult than it is)

TWO PIANOS, FOUR HANDS

- Grade 4**
110-24125 Valse Petite Ella Ketterer .35
110-40067 Second Piano Part Ella Ketterer .40
(recital, study, even grading in parts)
- Grade 5**
110-40092 Menuetto from Sonata Op. 2, No. 1 Beethoven 1.00
(2nd piano part by Louise Godfrey Ogle, interesting, good for ensemble practice)

VIOLIN SOLO WITH PIANO ACCOMPANIMENT

- 114-40010 Once Upon a Time Maurits Kesnar .50
(easy, beginners, both parts interesting thematically)

OCTAVO

- Secular**
332-40079 How Do I Love Thee Harry Robert Wilson .16
(SATB, a "must" for all high school and college programs, arrangement of famous poem)
312-40093 Jesus Born in Bethlea, Traditional carol from the Appalachians arr. Tom Scott .20
(one of Scott's finest arr., another "must," easy to sing, totally different than any other choral arr. of a Christmas carol)
332-40067 The Lord's Day Ralph E. Marryott .12
(unison or two-part voices, easy a cappella, easy parts, could be used on Sacred programs)
332-40073 The Lamb Gladys Blakely Bush .12
(3 part song or chorus for women's voices, a cappella, extremely easy)
- Sacred**
332-40062 O Gentle Jesu arr. J. Roff .12
(SATB, 17th century melody, easy a cappella arr. in choral style)

Music Book Suggestions For The Month

433-41003 CHURCH ORGANIST'S GOLDEN TREASURY VOLUME 11

Edited by Carl F. Pfatteicher and Archibald T. Davison
An ideal book for church service preludes and postludes. Every composition based on a Lutheran chorale, written by a Lutheran master. One editor is a lecturer of church music at the University of Pennsylvania, the other a professor of music at Harvard. Bohm, Krebe, Walther, Bach, and many others are represented. Complete index of all chorales, authors and translators of hymns.
List price, \$3.50

410-41009 GRAB-BAG by Bruce Carleton

More fun than work! 14 skillful first grade piano arrangements of familiar tunes. Encourages advancement. Engraved with big notes for easy reading. Illustrations are especially appealing for children.
List price, \$6.00

410-41011 HIGH SCHOOL HARMONIES by Stanford King

Learn these pieces now—play them all summer! 10 original pieces with such titles as *Swinging Down Sycamore Lane*, *Bubble Gum Boogie*, *Rumpus Room Rhumba*. Excellent for technique and style. For adults or grades 3 to 4.
List price, \$7.75

433-41002 DITSON ALBUM OF ORGAN AND PIANO DUETS Arranged by Roy S. Stoughton

Among the best duet collections for the limited repertoire for organ and piano. An outstanding job of arranging ten classics for average players. Included are Tchaikovsky's *Andante* from the "Sixth Symphony"; Bach-Gounod's *Ave Maria*; Ravel's *Pavane*; Debussy's *Reverie* and others. Two copies are required for performance.
List price, \$1.50

THEODORE PRESSER CO., Bryn Mawr, Pennsylvania

Music Book Suggestions for the Month Continued

434-1001 TEN CHORAL PRELUDES AND A FANTASY ON FAMILIAR HYMN TUNES by H. Alexander Matthews

A book for the discriminating organist. Includes preludes, offertories, and postludes based upon well-known hymn tunes. They are simple in design, and never above average difficulty; of particular appeal to the young organist. The collection contains hymns suitable for the important seasons of the church year, including Christmas, Lent, Easter, and others for general use. Hammond registrations are given.
List price, \$1.00

SONGS OF WORSHIP

A Collection of Sacred Songs for the Church Soloist
These simple songs of devotion, with their appealing text and variety of mood will attract young singers and strike response in the congregation. Good for the repertoire of any church soloist—easy to prepare. Texts are from scriptural hymn and contemporary sources. Included in the twelve pieces comprising the book are special songs for Christmas and Easter. Be sure to specify High or Low Voice when ordering.
List price, \$7.75
411-41000 High Voice
411-41001 Low Voice

PIANO PARTNERS

Teacher and Student Piano Duets by Molly Donaldson
The problem of holding the piano pupil's interest is often difficult because he is bored with the easy-grade pieces he is obliged to play. Mrs. Donaldson has solved this problem with duets for pupil and teacher. The primo parts are easily played by first and second grade students, while the teacher plays the difficult secondo parts; thus the student feels he is performing an interesting piece of music. The numbers are original and refreshing, and will appeal to young, active minds.
List price, \$6.60
410-41017

PEDAL MASTERY

by Rowland W. Dunham
Pedal Mastery is a book all organists will find invaluable. Mr. Dunham, distinguished organist and teacher, skillfully presents a clear and understandable pedal method which will assure absolute mastery of this difficult feature of the organ. In his book, the best tenets of the English and French schools are preserved and welded with new principles used for the modern electric organs.
List price, \$2.50
417-41002

410-41016 THEMES FROM THE GREAT BALLETS Arranged for piano solo by Henry Levine

Those of you who look forward to the annual appearance of the Ballet de Monte Carlo, Ballet Theater, Sadler Wells Ballet Co. and others, will be particularly enthusiastic about Mr. Levine's latest addition to his collections of theme music. By popular demand he has arranged, for the piano, selections from the world's great ballets. A partial listing of the contents includes excerpts from: Adam—GISELLE; Delibes—COPPELIA; Gliere—THE RED POPPY; Stravinsky—THE FIRE BIRD; Tchaikowsky—SWAN LAKE.
For U. S. and its possessions only.
List price, \$1.25

ZOLTAN KODALY WAS MY TEACHER

(Continued from Page 13)

first and only question when he saw me was what had happened to the lost G—he had not heard it go to the F.

Kodaly is one of the few modern composers who have never written a piano concerto. I have hopes of convincing him that he should work on a concerto because I feel he would write a good one.

The fact that Kodaly has virtually abandoned composition and teaching and is now devoting himself to Hungarian literature and folklore is a fitting tribute, in my estimation, to a man who never lowered his standards, who sacrificed personal ambition for the greater good of the music of his native land, and who ranks with the greatest teachers and musical creators of this day and age.

Zoltan Kodaly's initial composition, an overture, was performed by a student's orchestra in Budapest in 1897, when the composer was 15 years of age. His works were first performed outside Hungary in 1910 when his string quartet was given in Zurich and piano works in Paris. Only his sonata for cello and piano were also performed outside Hungary before World War I.

Kodaly was slow to produce

orchestral works, and it wasn't until 1919 that he wrote his "Nayari Este" ("Summer Evening"). This work was performed in New York in 1930 by Toscanini. In 1920 his Opus 12 for two violins and viola became known in Europe; in 1922 his Sere-nade was given in Salzburg, and the following year his Sonata for cello.

In 1923, the 50th anniversary of the union of the twin cities, Buda and Pest, he was commissioned to write the *Psalmus Hungaricus*, Opus 13, which received its first performance in Budapest on November 19th. The work was translated into eight languages, and was given hundreds of performances. On October 26, 1926, his comic opera, "Hary Janos," was produced. The suite from this work was performed by Mengelberg and the New York Philharmonic December 15, 1927, while the "Dances of Marosszek" and the "Dances of Galanta" were performed by Toscanini in New York in 1930 and 1933. Kodaly's other opera, "The Spinning Room," based on Hungarian Folklore, was presented in Budapest in 1932. Other works have emerged in a slow steady flow from 1901 to the present time.

THE END

CLASS PIANO TEACHING GETS RESULTS!

(Continued from Page 18)

add, so that they become permanent working units of six members each. I try to keep these units together until they reach high school when new arrangements are necessary. About this time those who plan to make their careers in music are sent to conservatories where they can start earning credits which private teachers in the state of Alabama cannot give toward a degree in music. The other high schoolers are rearranged into classes of four.

With six in a class, all fairly good note-readers eager to make music, our first mission has been accomplished. Each class session thereafter is a challenge to the teacher's ingenuity.

By the time the third year is reached the teacher must do a great deal of pre-lesson planning. With a blackboard, work table, two or three pianos, note-stamping set, plywood notes and rests, scale pictures, sight-reading material, ensemble numbers, Tapper's cut-out history books, record player, and recording machine there will never be enough time nor a dull moment.

Take one lesson period of third

term children, for example. We have a new trio. The six students gather around the table. The two high trebles stand together, the two middle performers, and the two bass players. First we clap the rhythm a couple of times, then we play the parts on the rhythm band instruments. With every new trio we change places in order that each child will become proficient in high note and low note reading. It is often necessary to leave the slow members in the class at the middle of the keyboard.

After we have learned the rhythm we sight-read, making ready for home work before the private lesson. This preview stimulates interest and makes the practicing of the tuneless parts more interesting. We next play the ensembles which we have already learned and played to death because the pupils get a big bang out of playing things they know well. We have combinations of trio at one piano, solo at the other (Grieg's "Elfin Dance" is good), quartet at one piano and duet at the other ("Airy Fairies" by Spaulding is very effective), double duets, trios, solos. (Continued on Page 62)

Sav-A-Rug

Piano Pedal Pad

Patent
Applied for

STOP "HEEL HOLES" FOREVER; SAVE YOUR PRECIOUS RUGS

with this beautiful safety mat. A quality product moulded in a lovely musical design of rich, soft brown rubber which blends with piano finish. Adding beauty and utility to the finest of drawing rooms, it is a Good Housekeeping MUST. Prevents ugly worn spots or covers them; encourages correct posture—in a word—IT BELONGS. Sent to any address in the U. S. A. for \$3.50 cash, check or money order. No COD'S. On CLUB plan, order five mats, remit \$14.00, save \$3.50. Special offer for agents and music teachers. Due to conditions the supply is necessarily limited so order promptly to avoid disappointment.

CLASS PIANO TEACHING

(Continued from Page 61)

During the Christmas holidays we have musical teas. One class provides the music, while another furnishes the conversation around the punch bowl to drown out the music, just like at real teas.

Every pupil gets a report card once a quarter. Excellent work is always paid a tribute, either in the form of praise in front of classmates, or by the gift of a musical card, pin, or statuette.

The parents who are musical appear on recital programs with the children. A mother sings a solo with her daughter as accompanist; a father plays a duet with his small son. The entire audience, comprising parents and relatives, stands to sing a hymn or folk song. It's a radical change from old-style recitals.

I wasn't taught as I am now teaching. My teacher wore long skirts which swept the floor as she walked. She cracked our knuckles with a ruler and spoke in icy terms when we stumbled. I'd have given it up if my mother hadn't been a determined woman.

Today the situation has changed. Most of our pupils have to snitch a bit of practice between Papa's news broadcast, Sister's dance program, Brother's sports review, and Hopalong Cassidy on T.V. If they are not really keen about their music they have many excuses for not bothering with it.

That is one of many reasons why piano lessons must be stimulating, competitive, pleasant, and challenging. Class work is stimulating because of its variety, competitive because it has more to offer than any other form of amusement, pleasant because one's buddies will be there and there'll be a bit of fun, challenging because "the others may be better prepared."

Class lessons have arrived. If the private teacher is to meet the competition of lower prices and more students, she will have to move out of the family living room, provide a studio for herself either in a spare room, in the basement, or over the garage. She will have to attend workshops and clinics and buy an extra piano as well as other necessary equipment. She should join the Music Teachers National Association and the Music Educators National Conference, attend the meetings and read their magazines, as well as the other publications which have much to say about her profession. She will have to study the lists of new materials, exchange ideas with her fellow teachers and go along with those who know from years of trial and error that class work is a wonderful way to teach music.

THE END

SOUTHERN YOUTH BUILDS A SYMPHONY

(Continued from Page 22)

surprised to find that they require only one rehearsal with the Symphony before a concert. On occasion, the Symphony sets up two or three rehearsals in advance, only to have the artist declare the second and third rehearsals unnecessary.

The Symphony itself rehearses late in the afternoon, two or three times a week, during the season.

The orchestra is composed of 90 musicians, 75 of them professional. The remaining 15 are outstanding young musicians who are happy to be chosen to play with the orchestra for the experience. As they acquire professional polish and experience, these young musicians are added to the payroll.

It hasn't always been clear sailing for the Atlanta Symphony, Atlantians found it hard to realize that they had a full-fledged symphony, rather than an outstanding youth symphony, and they were slow to give their financial support to the ambitious undertaking.

In 1939, the idea of a combined high school orchestra was conceived by Anne Grace O'Callaghan, Supervisor of High School Music in the Atlanta schools. Miss O'Callaghan, with the help of interested musicians and school officials, organized the In-and-Out Atlanta High School Orchestra and invited Dr. Joseph Maddy, founder of the famous National High School Orchestra Camp at Interlochen, Michigan, to conduct the first concert on February 9, 1939.

Dr. Maddy returned each year to conduct the orchestra in concert, and at one time mentioned the idea of an Atlanta orchestra for young women and men who had finished high school. The idea remained with Miss O'Callaghan, but nothing was done about it at that time.

Outstanding young musicians were encouraged, however, by scholarships awarded to members of the high school orchestra for training at Dr. Maddy's summer camp at Interlochen.

Henry Sopkin, an outstanding youth symphony conductor, first came to Atlanta to conduct the huge combined high school orchestra in 1934. The young people did well under his direction, and he returned the following year.

Mr. Sopkin received his musical training in Chicago, where he studied piano and violin under the late Leon Samatini. At twenty-one he became a member of the faculty of the American Conservatory and later head of the instrument department, teaching orchestration and conducting.

Throughout his career, he had been interested in young musicians, and

he was very much impressed with the work of the Atlanta high school boys and girls.

Late in 1944 Miss O'Callaghan enlisted the aid of Mrs. James O'Hear Sanders, president of the Atlanta Music Club, in organizing the type of symphony first suggested by Dr. Maddy. And under the sponsorship of the Music Club, the Atlanta Youth Symphony was organized. Sopkin was asked to conduct its first two concerts in the winter and spring of 1945.

The Music Club paid the conductor's expenses, and the concerts were free. Capacity audiences applauded the work of the one-hundred young musicians.

In September, 1945, the Music Club underwrote Sopkin's salary for a full months' season, with four concerts scheduled. A group of 22 interested persons and corporations defrayed all other expenses, and capacity audiences continued to attend the free concerts.

Gradually, professional musicians were added to the orchestra until it became the full-fledged Atlanta Symphony Orchestra. And that's when the financial problems began.

The first subscription sale of tickets for the 1947-48 season, resulted in only nine hundred tickets sold. Atlantians had not yet accepted the Atlanta Orchestra as a symphony. They continued to consider it a young people's orchestra, and many were reluctant to pay admission.

The low point was reached in the spring of 1949. The Symphony by then was several thousand dollars in debt, and the prospects seemed very gloomy.

Then, in the summer of 1949, interested persons came together to make an all-out effort to keep the Symphony on the Atlanta scene, and they succeeded.

Before the 1949-50 season opened, the number of professional musicians in the orchestra was increased to 55, while the non-professionals numbered 35. Five nationally known artists were slated to appear in concert with the Symphony during the 1949-50 season. They were Dorothy Kirsten, Jacques Abram, Tossy Spivakovsky, Oscar Levant and William Kapell.

The Mayor declared September 18 through 25 as Symphony Week in Atlanta. Local stores, newspapers and radio stations cooperated in the fight to keep the Atlanta Symphony alive. As a result of the concentrated campaign, more than four thousand season tickets were sold within a week. Symphony Week was a success, and the Atlanta Symphony was on the way up.

An outstanding contribution to the Sym- (Continued on Page 64)

SOUTHERN YOUTH BUILDS A SYMPHONY

(Continued from Page 63)

phony has been made by the Atlanta Symphony Guild, Inc., an outgrowth of the group which originally underwrote the Atlanta Youth Symphony.

In the summer of 1949 the Women's Committee of the Guild was organized, and the officials of the orchestra give the women much of the credit for selling the Symphony. One official estimates that the 150 women in the group have made as many as 15,000 telephone calls to enlist contributions and sell season tickets to the concerts. The service is entirely voluntary.

As a result, the Atlanta Symphony entered the 1950-51 season "in the black," possibly the only symphony in the country in this condition.

Corporate gifts and large personal donations have been particularly sought by the group. A plan of company sponsors is being tried for the first time this year, and promises to become very successful. This program is under the direction of the president of one of Atlanta's largest department stores and the president of a leading bank. Businesses participating pledge a certain contribution for a two-year period.

Another division of the Symphony Guild is the Junior Division, composed of younger women who assist the Women's Committee, and serve as hostesses at the Young People's Concerts.

The Young People's Concerts, undertaken first during the 1949-50 season, also have been an outstanding success.

This is a series of three concerts offered for school children only. The concert tickets were first offered through Atlanta schools but many school officials in neighboring towns have asked to participate in the program and have been included in the 1950-51 series.

The concert series for young people during 1949-50 was highly successful. But the 1950-51 season saw a landslide of dollars that bought every seat in the house within two days and left 400 children on the waiting list for tickets.

The entire series is sold for \$1.00 per ticket. The tickets are printed in special program booklets which contain program notes and other study materials to help in the preparation of the students for the concerts.

The school teachers cooperate with the Symphony by discussing the music to be played, playing recordings of various selections and teaching concert etiquette.

The children also hear broadcasts over the Atlanta school system's radio station, WABE-FM, which include commentaries on the music and interviews with the concertmaster and the conductor.

The music, although classical, is chosen particularly for its appeal to the children, and an outstanding young student musician is chosen to appear as guest soloist at each Young People's Concert. Some of the selections used have been Sibelius' "Finlandia," Rimsky-Korsakov's "Capriccio Espagnole," and Schubert's "Unfinished Symphony."

Although the Symphony of today is composed of mature musicians, many of them are the former high school boys and girls who played in the first In-and-Out Atlanta orchestra.

Concertmaster of the Symphony is Robert Harrison, Professor of Music at the University of Georgia. Harrison is probably the youngest concertmaster of a major symphony in the country, but Conductor Sopkin describes him as "the best violinist I've heard."

• There is nothing in which the power of art is shown as much as in playing on the fiddle. In all other things we can do something at first; any man will forge a bit of iron if you give him a hammer; not so well as a smith but tolerably; and make a bar though a clumsy one; but give him a fiddle and a fiddle-stick, and he can do nothing.

—Samuel Johnson

At the time that Harrison was a student at the University of Georgia he served as concertmaster with the original high school orchestra. He attended the Juilliard Graduate School, and returned to the University of Georgia as Director of Violin Training. His wife also is a violinist with the Symphony.

An Atlanta Symphony School is operated for four weeks each summer to train young musicians. The Atlanta Symphony Guild underwrites the school. Conductor Sopkin and a staff of seven musicians teach instruments, harmony, theory and ensemble playing.

A high school orchestra is continued throughout the school year as a training ground for future Symphony members. In all ways southern young people are encouraged not only to take an interest in good music, but to aim toward the goal of a place in a major symphony orchestra in the South.

Most of the professionals now in the orchestra have other professions as well. There are insurance men, school teachers, music teachers, and others. But when they appear on the stage, they are one in the music of the Atlanta Symphony Orchestra.

THE END
