"America's Most Unusual College"

IN ITS RADIO PROGRAMS, CONCERTS, RECITALS, ORATORIOS, OPERAS AFFORDS STUDENTS OPPORTUNITIES FOR PUBLIC APPEARANCE, SOME IN ASSOCIATION WITH PROMINENT GUEST ARTISTS.

A scene from a recent opera production at Bob Jones College

VOICE, PIANO, PIPE ORGAN, VIOLIN, CHORAL TRAINING, ORCHESTRA, SPEECH AND ART WITHOUT ADDITIONAL COST ABOVE REGULAR ACADEMIC TUITION

Bob Jones College, which stands without apology for the "old-time religion" and the absolute authority of the Bible, has had an increase in enrollment of fifty per cent in the last two years. Bob Jones College offers a wide variety of courses leading to Bachelor of Arts and Bachelor of Science degrees, and in the Graduate School of Religion courses leading to the Master of

Arts and the Doctor of Philosophy degrees, and in the Graduate School of Fine Arts courses leading to the Master of Arts and the Master of Fine Arts degrees in music and speech. The Bob Jones College Academy affords splendid opportunities for high school training especially valuable to young men soon to enter upon military service.

BOB JONES COLLEGE

CLEVELAND, TENNESSEE

SAMUEL BARBER

THE FIRST PERFORMANCE of a full-length symphony, composed for and dedicated with permission to the Army Air Forces, by Corporal Samuel Barber, took place on March 3 in Boston, when the work was presented by the Boston Symphony Orchestra, conducted by Serge Koussevitzky. The "Symphony Dedicated to the Army Air Forces," was begun last September at Fort Worth Army Airfield, Texas, when Corporal Barber accompanied pilots on many flights. It is his second work in this form, his "First Symphony" having been written in 1936, and having the distinction of being the only American work produced that season in Salzburg, when it was conducted by Artur Rodzinski. The new work is in three movements and makes use, in the second movement, of an electrical instrument especially constructed by the Bell Telephone laboratory, to simulate the sound of the radio beam used for night or "blind" flying.

EDWIN McARTHUR, young American conductor who in 1943 spent six months in the South Pacific war area under the joint auspices of the War Department and USO Camp Shows, has returned to that war theater at the specific request and in the personal suite of Lieutenant-General George C. Kenney, Commander of the Fifth Air Force. Mr. McArthur, reported to be "somewhere in New Guinea," has the distinction of being the first civilian assigned to work directly with Army officials in shaping up programs of music-making by the servicemen themselves.

THE THIRTY-SEVENTH ANNUAL BACH FESTIVAL at Bethlehem, Pennsylvania, will be held May 19 and 20 at the Chapel of Lehigh University, with Ifor Jones conducting. The programs of the two-day sessions will include the Cantata No. 104, "Thou Guide of Israel"; the Cantata No. 102, "Lord, Are Thine Eyes Not Searching for the Righteous?"; the Motet, "Be Not Afraid"; the Cantata No. 93, "If Thou but Sufferest God"; the Cantata No. 4, "Christ Lay in Death's Dark Prison"; and as usual, the complete "Mass in B minor." E. Power Biggs will be the Festival organist and will give a recital at 11 A. M. on Saturday, May 20, in the Central Moravian Church.

LEONARD BERNSTEIN, young assistant conductor of the New York Philharmonic-Symphony Orchestra, who earlier in the season made a sensational last-minute substitution for Bruno Walter, suddenly taken ill, will appear with the orchestra next season, not as assistant conductor, but as a guest conductor. Artur Rodzinski has been reengaged for his second season as permanent conductor and musical director of the organization. Other guest conductors who will appear with the orchestra next season are Igor Stravinsky, Pierre Monteux, and George Szell.

JOSE SIQUEIRA, founder and president of the National Symphony Orchestra, of Brazil, is now in the United States under the auspices of the State Department and the Office of the Coordinator of Inter-American Affairs, making arrangements for the exchange of North

land, and the United States, died on February 3 at Aix-la-Provence. She was seventy-nine years old. An authority on the medieval folklore of her native country, she was awarded the Legion of Honor as "The Ambassadors of French Song."

FRITZ KREISLER, noted violinist-composer, will make his radio debut when some time this summer he appears in the first of a series of five exclusive appearances as guest artist on "The Telephone Hour," heard Monday nights at 9 P. M., EWT. Mr. Kreisler was largely influenced in his decision to play over the radio by the increasing number of letters coming to him from the more isolated places of America. Many of the people in these far-off communities are never able to go to a recital or concert, and to hear Mr. Kreisler's artistry will bring them untold happiness.

FRITZ KREISLER

American musical compositions with those of Brazilian composers, through Aaron Copland, president of the American Composers Association. The plan also provides for an exchange of orchestral conductors in the post-war period.

LEONARD PENNARIO, pianist, Private First Class, A.U.S., whose New York debut with the Philharmonic-Symphony Orchestra was a sensation of the past season, has been playing with West Coast orchestras to help to raise funds to provide libraries of records for servicemen overseas. On February 19 he played the "First Concerto" by Tchaikovsky, with the San Francisco Symphony Orchestra, under Pierre Monteux.

YVETTE GUILBERT, French singer and actress, who at the turn of the century was well-known throughout France, Eng-

APPROXIMATELY TWO THOUSAND song leaders among men and women in uniform have been trained in a period of a little more than a year by the USO's ten music advisers. This was announced at a USO Music Advisers national conference in the offices of the Joint Army and Navy Committee on Welfare and Recreation in Washington. A farm boy in the Army who has never handled a music instrument is taught to play the trumpet, Army and Navy musical shows are produced, symphonic bands organized, song leaders trained and music-on-the-march stimulated—all through the efforts of USO's music advisory staff. The USO distributed 3500 amateur song kits during the past year and is now sending quantities of sheet music to all its clubs. Army music materials now sent to troops all over the world, according to Captain Morris C. Rosenberry of the Army, include 100,000 V-DISC records of classical, semi-classical, and popular music each month; Army Hit Kits of six popular songs each month (words and music), and "Hymns from Home," leaflets of twelve nondenominational hymns and the Twenty-third Psalm, which are issued to the soldiers through the chaplains and also put into K-Ration parcels.

Competitions

THE COMPETITION for the fifth annual Edgar Stillman Kelley Junior Scholarship of the National Federation of Music Clubs will be limited to residents of states in the Central Region, comprising Iowa, Illinois, Wisconsin, Missouri, Kansas, Arkansas, North Dakota, South Dakota, Minnesota, Nebraska, Texas, and Oklahoma. The competition is open to musicians under sixteen years of age, and State auditions are scheduled for February, March, and April. All details may be secured from Miss Etelka Evans, Cincinnati Conservatory of Music, Cincinnati, Ohio.

THE NATIONAL FEDERATION OF MUSIC CLUBS has announced the second annual Young Composers' Contest for total awards of three hundred dollars. The major prize of one hundred dollars is for a composition for chamber orchestra, with a second prize in this classification of fifty dollars. There also are prizes of fifty and twenty-five dollars for compositions in other classifications. Full details may be secured from the National Chairman, Miss Marion Bauer, 115 West Seventy-third Street, New York City.

TWO PRIZES OF \$1000 EACH are to be given for string quartet compositions, by the Chamber Music Guild, Inc., of Washington, D. C., in conjunction with

the RCA Victor Division of the Radio Corporation of America. One of the prizes will be awarded for the best string quartet submitted from the republics of Latin America, while the other prize will be given for the best ensemble work submitted from the United States and Canada. The contest closes May 31, 1944, and full information may be secured by writing to The Chamber Music Guild, Inc., 1604 K Street, N. W., Zone 6, Washington, D. C.

PRIZES TO THE TOTAL OF \$2000 in United States War Bonds are to be awarded by the National Federation of Music Clubs to federated music groups which, during the period from September 1, 1943 to May 15, 1944, present programs which in the opinion of the board of judges most significantly serve the nation's war efforts. Donor of the awards is Donald Voorhees, noted American conductor and musical director of a number of outstanding radio programs. The first prize is \$500, with smaller awards down to \$25, offered "only for public performances of music given by amateur musical organizations within the specified dates." Full information may be secured from Mrs. Ada Holding Miller, Chairman, War Service Committee of the National Federation of Music Clubs, 28 Everett Avenue, Providence, Rhode Island.

LINA CAVALIERI, famous opera singer of another day and member of the Metropolitan Opera Company for several years following her debut in 1906, died on February 8 when bombs fell on her home in the suburbs of Florence, Italy, demolishing it and killing the singer. She was famed for her beauty as well as her voice, and sang in many concerts in America. She appeared also with the Manhattan Opera Company.

GRAND OPERA at New York's new City Center of Music and Drama had a brilliant and successful opening night when on February 16 a most effective production of "Tosca" was presented under the direction of Laszlo Halasz, with the principal roles in the capable hands of Dusolina Giannini, George Czaplicki, and Mario Berini. Overcoming the serious handicap of inadequate scenery and an orchestra too small to project fully the Puccini score, the hard-working Mr. Halasz accomplished a splendid achievement in a performance "of the most refreshing sincerity, competence, and dramatic impact."

Highly-Esteemed MUSIC TEXT BOOKS By CLARENCE G. HAMILTON

OUTLINES OF MUSIC HISTORY

Although titled "outlines", this history is honored in thousands of libraries as a most authoritative work. The author's endeavor to make it also a source of music appreciation is probably best exemplified by the following excerpt from the Preface: "I know of no more fascinating pursuit than that of tracing the steps by which mere unrelated sounds have been moulded, through ages of subtle invention, into a medium for expressing some of the grandest and most elusive of human thoughts."

Cloth Bound—Price, \$2.25

MUSIC APPRECIATION

Based on methods of literary criticism, this is an especially fine book to place in the hands of one who wishes to familiarize himself with the great works of the masters, to learn about their beauties, to be able to listen to them with a quickened hearing and real understanding. There are 24 portraits, 28 diagrams and over 200 music cuts as illustrations.

Cloth Bound—Price, \$2.50

SOUND, AND ITS RELATION TO MUSIC

Every intelligent musician should be familiar with the physical laws which underlie his art. Here is a compact statement of these laws and of the chief facts, theories and experiments in accordance with which they have been formulated. A most valuable reference or text book.

Cloth Bound—Price, \$1.50

EPOCHS IN MUSICAL PROGRESS

To appreciate the music one hears, the listener should have some understanding of the trend of musical development and some knowledge of what has gone before. This volume gives a bird's-eye view of the field of musical endeavor and traces the story of its growth. Its eight chapters are illustrated, pictorially and musically, and give lists of reference books for collateral reading.

"De Gustibus non est Disputandum"

HAVE A HEART, Brother. I just can't stand music like that!" The speaker was a prosperous Yankee merchant who had climbed over mountains of obstacles until he found himself the owner of a department-store, mail-order business in a middle-sized city in West Virginia. For years he had been turning the grindstone of success in proscribed Samuel Smiles* fashion until he had become myopic and dollar eyed watching its revolutions. Culture, to him, was significant only insofar as it induced people with little or nothing worth while to do, to create new markets for his wares. Thus, when he heard the exquisite tones of Lily Pons, as she sang the *Bell Song* from "Lakmé," they had no meaning to him.

But our merchant was only one of more than one hundred million people in our country, each with a different type of musical taste. Just as the fingerprints of one individual never have been duplicated in another individual, so the musical taste of one person never has coincided exactly with that of any other person. The Latin proverb, "De gustibus non est disputandum" (There is no disputing tastes), is amazingly demonstrated by personal preferences. You, who hear over the radio a mad jangle of stertorous, blatant sounds from some incredible group of jazz players, are amazed to listen to the overwhelming clatter of applause with which it is received in dance halls. Yet these jazz hounds, in their kennels, will bark their heads off with impatience when they are asked to sit through a program of the jeweled music of Mozart.

To many, the responsibility of compelling others to enjoy only some particular type of "approved" music often takes on the nature of a medieval crusade. We know a much-traveled music lover who made herself miserable because the public did not respond fanatically to the clamant, ear-splitting decrepitations of Alban Berg's tonal curiosity, "Wozzeck." To us, "Wozzeck" seemed the flower of Nazi sadism, which the "Society for the Prevention of Cruelty to Ears" should have suppressed by legal process. Fortunately, that has not been necessary because, like the mythical snake that, when angry, commits suicide by biting itself, "Wozzeck" promises to pass behind the portals of oblivion. Alec Templeton properly has labeled music of this type. He says that it sounds "as though somebody was moving the furniture around."

"Wozzeck" was written just after Berg had climbed out of the mud and blood of his service in the First World War. It was supposed to represent the last word in German modernity in music. Perhaps it does—more's the pity. Its fabulous difficulties and its tonal excretions created a furor. It has been given one hundred sixty-six times (twice in the United States) and, in the opinion of your editor, its future performances should be restricted to Germany as a post-war penalty for the other terrible and disagreeable things which the Nazis of today have brought to civilization, after previous centuries of glorious German achievement and beauty. But, you see, that is only one man's personal opinion, and, unquestionably, there are in the world many to whom these frightful and nerve-wracking, disorganized sounds are delightful, just as dogs relish their own vomit.

Man naturally will select the music he likes best. Never in his-

* A young lady who has just read the manuscript of this editorial asks: "Who was Samuel Smiles?" Well, S. S. was the prophet of the self-made man. He was born in 1812 and died in 1904. He was an Edinburgh University man who devoted himself to political and social reform. His self-help books, "Self-Help," "Character," "Thrift," and "Duty" had staggering sales.

ANTON SEIDL

Photo by Aimé Dupont

tory has been better able to find out what he wants from the tone world than in this high tide of radio. Every variety of music, good and bad, from every country of the globe, played by the greatest performers of their kind, is poured into his home daily. Thus, our music has become a matter of trends.

One singular advantage of our American system of radio programs, sponsored by commercial interests, is that a very careful check-up upon what the public really wants in music is kept regularly. Any alert observer must realize that on the whole the standards of taste are gradually ascending, not because some group is imposing its taste upon the radio world, but because it is demonstrated somehow that better and better music is demanded by the public. Music with lovely melodies, clever rhythms, smart and ingenious orchestrations, forms the basis for the main demands at this time. But always there will be a call for jazz and boogie-woogie with their monotonous and sterile backgrounds, just as at the other extreme there will be a call for symphonic and operatic programs presenting the less readily comprehensible works of modern composers.

In much the same way, Mr. Presser looked upon the music section of THE ETUDE, which he considered a kind of ladder of musical taste. He knew that many of the compositions included must appeal to a circumscribed musical understanding. It has been our experience, however, that those whose first steps in music have been limited to the simplest and most obvious pieces to appear in THE ETUDE, gradually, of their own volition, look for music of a more advanced type.

In the editor's boyhood days he had two mentors—friends whose encouragement was invaluable. One was the unforgettable

The Etude Musical Quiz

by Charles D. Perlee

THE CONSISTENT and intelligent listener of today knows almost as much about music as the average musician. Responsible for the dissemination of all this musical information are radio and its commentators, excellent instruction in our public schools, and the increased number of fine books and articles on music. How much do you remember? Count two points for each correct answer. Fair: 50; Better than average: 60; Good: 70; Excellent: 80 or higher.

1. "Verklärte Nacht" (Transfigured Night) is probably the most widely known composition of
 - A. Richard Strauss
 - B. Franck
 - C. Schönberg
 - D. Ravel
2. All but one of the following composers wrote more than a single symphony:
 - A. Bruckner
 - B. Mahler
 - C. Sibelius
 - D. Franck
3. A conductor of an American symphony orchestra who is also a virtuoso performer on the bass-viol is
 - A. Rodzinski
 - B. Koussevitzky
 - C. Krueger
 - D. Toscanini
4. *L'Heure Espagnole* is a one-act opera by
 - A. Debussy
 - B. Charpentier
 - C. Ravel
 - D. Massenet
5. "Lucia di Lammermoor" is based on a story by
 - A. Charles Dickens
 - B. Willa Cather
 - C. Sir Walter Scott
 - D. John Luther Long
6. The *Largo* movement from Dvořák's "New World Symphony" was arranged into a song called
 - A. Our Love
 - B. None But the Lonely Heart
 - C. Homing
 - D. Goin' Home
7. Seldom performed are the operas of
 - A. von Weber
 - B. Massenet
 - C. Rossini
 - D. Verdi
8. Zoltán Kodály, the Hungarian, is the composer of
 - A. *Afternoon of a Faun*
 - B. "Escale"
 - C. "Symphony on a French Mountain Air"
 - D. "Háry János"
9. The "Beloved Friend" of Tchaikovsky was
 - A. Anton Rubinstein
 - B. Leopold Damrosch
 - C. Nadejda von Meck
 - D. Michail Glinka

Humor in Music

"Shortly after Pearl Harbor, at a performance of 'Hansel and Gretel' in Chicago, the flying of one of the angels in the cast was terminated suddenly by trouble with one of the wires that held her suspended. In the hush that followed a small boy's voice from the balcony was heard to shout, 'Keep 'em flying!'"

—The Evening Bulletin (Philadelphia).

"The Great Mr. Handel"
Enters the Films

THE ETUDE presents on Pages 198, 199, and 200 a series of pictures from the cinema drama, "The Great Mr. Handel," produced in extraordinarily fine technicolor, with a musical background performed by the London Philharmonic Orchestra. The film, with Ernest Irving as musical director, was made in London and is distributed by Midfilm, Inc., New York. This is one of the most artistic and impressive films your Editor has yet seen. The whole production is done in such taste and with such historical consideration for the settings that it seems as though the great artists, Romney, Reynolds, Gainsborough, and Hogarth, reincarnated, had made the presentation.

WILFRID LAWSON AS HANDEL

"The Great Mr. Handel" opened last year at the 55th Street Playhouse and ran for over four months (exceeded only by the film production, "For Whom the Bell Tolls"). The story has to do with Handel's life from 1738 to 1742 when the composer, then in his fifties, had battled magnificently through his operatic failures, through court intrigues, through professional jealousies, and even partial paralysis, never once pandering to a lowered standard. While the film necessarily demanded adjustments, justified by poetic license, the spirit of Handel is preserved in an uncanny manner.

The story opens with a scene in which Frederick, Prince of Wales, is approached by Handel's manager, Heidegger, who seeks the patronage of the Prince for a new operatic venture. Lord Chesterfield is a member of the party and Heidegger's plea is turned into a wager, which is little more than a joke. The Prince is so prejudiced against Handel that he starts opposition at the Opera House and also at Vauxhall Gardens. Handel, a broken but undaunted man, withdraws to his chambers, but on his way finds that an obol of his acquaintance has died of starvation, leaving two musical sons. He takes the boys to his home for protection and when he arrives, finds a small army of importunate creditors, who are astounded at the idea that, unable to pay his bills, he should pile on more responsibility. This clever touch points to Handel's philanthropic impulses which inspired him to leave a

very substantial bequest of money to the Foundling Hospital of London.

Among the especially effective scenes, made from settings by Sidney Gausden from contemporary eighteenth-century prints, are those at the Opera House; at Neal's Musick Hall, Fishamble Street, Dublin, where the "Messiah" first was given (April 13, 1742); the fine pictures of Handel writing the "Messiah"; and views of its first performance in London (1743), at which the King (George II), inspired by the *Hallelujah Chorus*, rose from his seat, the audience spontaneously following. This established a custom which has continued to this day. It should be remembered, however, that the "Messiah" at first was a flat failure in England, and it was not until seven years later that the people of the land of the composer's adoption commenced to appreciate it.

The ETUDE strongly recommends this beautiful film with its inspiring extracts from Handel's "Firework Music," *Ombra mai fu* (the celebrated *Largo*) from "Xerxes," "Where'er You Walk, the Minuet from "Berenice," and parts of the "Messiah." When "The Great Mr. Handel" comes to town, see to it that all of your pupils are informed.

Gloria in Excelsis Deo!

The young ladies on the cover of THE ETUDE for this month are a few members of the famous Choir of the Western College for Women at beautiful Oxford, Ohio. Dr. Everett Helm, the able head of the Department of Music and conductor of the Choir, has maintained a standard of admission and training so that each member has a proficiency that is virtually "one hundred per cent professional." Dr. Helm has a B.A. degree from Carleton College, Minnesota, and the degrees of M.A. and Ph.D. from Harvard. He has studied music with Francesco Malpiero (Italy), Vaughan Williams (England), Roger Sessions (New York), Walter Piston (Cambridge, Massachusetts), and Darius Milhaud (Oakland, California).

The young ladies appearing on the cover are, reading from left to right: (Top) Marjorie Walters (Beverly Hills, California); Catharine Jean Miller (Cedar Rapids, Iowa); Jean Boyd (Concord, Massachusetts); Nancy Meyer (Glencoe, Illinois); and Miriam Fatout (Indianapolis)—(Bottom) Louise Larkins (Yonkers, New York); Barbara Staff (New York City); Mary Huber (Troy, Ohio); and Kathryn Hancock (Indianapolis).

Piano Practice Game That Is Fun

by Vera Henry

IT SEEMS that in a boy's world there are a million things that are more fun, and in his eyes more important, than sitting on a stool and practicing scales. We tried everything with our eight-year-old. We praised and encouraged and tried to reason. When these failed, we tried, as parents are sadly apt, bribes and scoldings. That daily practice hour became a daily nightmare with a small rebellious boy, pounding indifferently away, with his mind far off on a baseball field. "I hate music!" he would protest. "I hate it!" "That," said my mother, "is just how you used to act."

In my imagination I could hear my son, twenty years from now, saying reproachfully that he wished that I had made him keep on with his music.

Just when we were about to give up, our problem solved itself. We had been given tickets to a radio broadcast. Young Jim was tremendously interested. He wanted to know about the sound engineers in their glass booth and the red warning light that indicated the program was on the air, and how the microphones worked.

The idea seemed worth trying and next afternoon when he was propelled with his usual reluctance into the living room for his piano practice, he found the room had been converted into a private radio station. There was a microphone through which his voice could be broadcast over our own radio set. A red bulb had been installed in a (Continued on Page 252)

Were you to visit Mr. Archer Gibson's music room in his impressive duplex studio in New York City, you would find a magnificent three-manual organ with over four thousand pipes and a quality of tone that is inimitable. The studio is completely equipped for broadcasting. By this means Mr. Gibson's playing has been heard on national radio programs. To most musicians Archer Gibson is almost a myth, as he has made very few public appearances in recent years. His playing has been confined to a group of private homes in which large pipe organs have been installed. In fact, in several of the musical dictionaries where artists of far less ability have been recognized, his name does not even appear.

Performing thus almost exclusively for years in the homes of American leaders of society, finance, and industry, he not only has sustained the highest standards of his art, but has developed a distinctive style very different from that of the usual concert or church organist. He is one of the most picturesque figures in our present-day musical life, and his account of years of intimate, personal acquaintance with famous American families makes an extraordinary and fascinating story. His work has astonished and delighted his audiences as well as famous musicians, who have been amazed by his skill in transcriptions of orchestral works for organs which have been designed according to his own specifications to meet a unique technic, which he has developed in an inimitable manner. His inspired improvisations are unrivaled. There have been few organists in the history of the instrument comparable to Archer Gibson in his field. Not many people have had an opportunity to become acquainted with his playing, save through occasional broadcasts over the radio. But Mr. Gibson must tell his own story.

THE GENERAL PUBLIC would be amazed to see some of the large private organs in America. For instance, consider that in the home of the late Joseph C. Baldwin, at Mount Kisco, New York. The chapel in which the instrument is located contains a complete four-manual organ at one end of the room, a complete solo organ in the opposite gallery,

Mr. Gibson seated at the console of the remarkable organ in his own home in New York. This organ cost between \$50,000 and \$60,000.

and there is another complete organ with an ecclesiastical tone of ethereal beauty located in a chamber in the basement. All three instruments are played from a single console. The chapel is a masterpiece of Italian Renaissance style. Mr. Baldwin was the head

tions in the ordinary sense of the word.

"The organ is, in its nature, one of the most individual of all instruments. It is a philosopher's instrument. Playing it effectively calls for a kind of comprehensive musicianship associated with no other musi-

Great Pipe Organs

From a Conference with

Archer Gibson, F.A.C.O.

Distinguished American Organist

SECURED EXPRESSLY FOR THE ETUDE BY JAMES FRANCIS COOKE

of the American Dyewood Company. He studied at the famous St. Paul School in New Hampshire and played the organ. He was especially fond of Mendelssohn's organ sonatas.

"Of all the music on my private recital programs the compositions most called for are the *Liebestod* from 'Tristan and Isolde,' the *Magic Fire Music* from 'Die Walküre,' the 'Parsifal' music, and the music of 'Lohengrin.' I play them in the form of musical digests I have made especially for the organ; not transcrip-

cal instrument. While the modern organ is a marvel of mechanical multiplicity, the organs such as those upon which I play are so 'singing in tone' and so susceptible to the most delicate shading, owing to the employment of highly sensitive electric controls, that there is seldom any suggestion of the mechanical.

"Just as in the case of the orchestrators arranging works for symphony orchestras, one cannot take a piano score and transfer it literally to the sustained tones of the organ. There must be a body, a balance, and a background to the outstanding melodies. This background is provided in the piano by the natural 'hangover,' or blur, of the vibrating strings. With the organ, the sound dies instantly with the lifting of the fingers, whereas the pedal of the piano may continue the tonal mass until the vibration ceases.

"Once I had a discussion with my friend, Fritz Kreisler, upon whom I look as one of the greatest musicians of our day, who insisted that 'the soul of the music must shine through the notes.' He is a living illustration of his own theory. In addition to being a great violinist, he is an excellent organist and an exceptional pianist.

The Composer Most Requested

"After more than fifty years of playing in the homes of noted American leaders of society, finance, and industry I have noticed that the composer whose works most often are demanded is Richard Wagner. After Wagner, the next choice is music from the best-known operas. Underneath all of this demand is the insatiable and irresistible human call for melody and rhythm. It has been my problem to present music, whatever its source, so that it may be comprehended and enjoyed by the listener without being obscured by austere or academic display.

"Fundamentally, music must appeal to the heart and the emotions. Music is not made to be heard by robots. I have had an aphorism which has characterized my ideals: 'In art or life, when you bait your hook with your heart, you cannot fail.' The average man or woman is not interested in music that sounds like a problem in differential calculus or that approximates the noises of a bomb attack. They want music which reveals to them that behind all the world troubles, as well as their own worries, there is a real, though intangible, spiritual beauty and nobility in life.

"The leaders of huge enterprises, after all, are quite as representative of the same musical desires as the man behind the counter in the shop. As Kipling put it: 'The Colonel's lady and Judy O'Grady are sisters under the skin.' Henry C. Frick, for instance, had a great liking for Dvořák's *Humoresque*, and especially for a song entitled *Dearie*, which he could not hear often enough. Known to his associates as a cold and hard man, when he was alone in his music room he used to light up one of his ten-inch cigars and exclaim, 'Now, let's have *Dearie*!' (Continued on Page 240)

"The Great Mr. Handel" Now in the Films

Scenes from the English Technicolor Success, Courtesy of Midfilm, Inc.

(SEE NOTE ON PAGE 196)

Like a rich painting of the period by Romney, Gainsborough, or Reynolds, this picturesque film is one of the most beautiful ever presented. It will make an unforgettable impression upon music students. The colors are rich and the pictures so realistic that the audience is transported back to the early eighteenth century.

Heidegger, Handel's manager, approaches the Prince of Wales (standing), Lord Chesterfield (at table), and other notables, seeking their patronage for Handel's operatic ventures.

The Prince of Wales laughs at Handel's plea. Lord Chesterfield tells of the financial difficulties of the master's opera company.

The Prince continues his intrigue against Handel and interrupts the performance of the "Fireworks Music" at Vauxhall Gardens.

Heidegger explains that Handel's operatic ventures are on the verge of failure and that the Prince has rejected his plea.

Handel (played by Wilfrid Lawson) and Mrs. Cibber (played by Elizabeth Allan) in the streets of London.

Handel and Mrs. Cibber rehearse at his home some of the works of the great master.

Handel explaining to his servant, Phineas, that he has decided to protect two orphans of a musician who died of starvation. It was this act that inspired him to make a large bequest to the Foundling Hospital.

Handel rehearsing the *Largo* with Mrs. Cibber, the little orphan boys joining in the concert. This is one of the most effective musical episodes in the film.

Handel conducting the first performance of "Xerxes" at the Royal Theatre (Covent Garden).

Handel, a victim of the Prince of Wales' intrigue, explains to his orchestra that he is ruined.

Continued on Page 200

Handel is hounded incessantly at his door by creditors. The women are street vendors of herrings. The local color in these portrayals is very rich and distinctive.

Handel, exhausted, at last finishes (in twenty-three days and nights) the score of the "Messiah."

Crowds going into Neal's Musick Hall, Dublin, Ireland, April 13, 1742, to hear the first performance of the "Messiah." Handel stands in the group.

The conceited Charles Jenens brings to Handel the libretto of the "Messiah," which he has made up of selections from the Scriptures. In reality the libretto was prepared by his chaplain, Pooley.

Dublinites reading the announcement of the coming first performance of the "Messiah."

Handel conducting the first performance of the "Messiah" in London. King George II, rising in his box when he hears the Hallelujah Chorus, establishes the custom which continues to this day.

Building Musicianship

An Interview with

David and Clara Damrosch Mannes

Distinguished Violinist and Pianist

Founders and Directors of the David Mannes School of Music

SECURED EXPRESSLY FOR THE ETUDE BY ROSE HEYLBUT

IF MUSICAL TALENT is inborn, sound musicianship must be acquired. The all-too-common belief is that "a gift" will take care of everything. Yet the error of such a view is made clear by comparing music to another art. Could a poet release the greatest lyric gift unless he had mastered a knowledge of words, forms, meters? The musician must also master the tools of his expression. How is such mastery best attained? What are the best influences for acquiring it?

In seeking an answer, THE ETUDE has turned to David Mannes and his wife, Clara Damrosch Mannes, who hold a unique place in American musicianship. Both are accomplished artists. Both have blazed trails in musical pedagogy. Both have rich, though different, musical traditions. Mrs. Mannes, daughter of Dr. Leopold Damrosch and sister of Dr. Walter Damrosch and the late Dr. Frank Damrosch, grew up with music. Mr. Mannes acquired music the hard way, exerting every effort to come upon terms of worthy familiarity with it. Little Clara Damrosch used to fall asleep at night listening to the harmonies of new scores that her father was playing on the piano downstairs—scores of the as-yet untried works of Berlioz, Brahms, Liszt. Little David Mannes fashioned a tiny fiddle for himself when the crippling illness that followed an accidental fall into boiling water deprived him of the normal activities of boyhood. Yet though they started from different points, they have arrived at the same goal. Both hold vigorous views on the nature and acquisition of musicianship.

"Since the winning of musicianship is largely environmental," Mrs. Mannes began, "its two most directive influences are found in the home and in the teacher's studio. The teacher has an added responsibility when his pupils come from silent homes where music is not a part of living but an 'accomplishment'; where family music-making, for the sheer fun of it, is unknown. Wherever that added responsibility exists, it must be met—and it is met. It is heartening to see the progress music teaching has made in its steady moving away from mere performing, and towards a well-rounded understanding of music."

The Alphabet of the Language of Music

"Actually," Mr. Mannes put in, "there can be no separation between music teaching and musicianship. To know music means not merely to play, but to read notes with the same understanding with which one reads words; to hear inwardly what one sees in print, and to visualize the tones one hears. That is why training in note values, rhythms, tonalities, chord sequences, forms, styles should be given as early as possible, even to

younger children. Only by such means will they gain independence in understanding and enjoying music. These elements constitute the alphabet of the language of music, and a child should be taught them regardless of his talents. Often parents will say, 'That is all very fine for the gifted child—but is it worth the trouble for the average youngster?' I should say it is, if anything, even more worth while! For, by such means, the average youngster can be brought to know and accept music that will enrich his life through all the years. Apart from interpretative values, the main difference between talented and untalented children is one of pace. The gifted child will learn more quickly—but the other one will learn!"

How, then, is this grammar of the music-language to be taught?

"There is no one fixed 'method,'" Mrs. Mannes explained, "but the most desirable procedure is to correlate all musical elements from the very beginning of

DAVID MANNES IN HIS LIBRARY

instruction. Music teaching has progressed beyond the point where children were taught to play, and then, some years later, were suddenly plunged into abstract theoretical studies that had no application to anything else they learned. We believe in training mind, ear, and fingers together. When the child is first taught to place his fingers on keys or strings, he can also be taught to recognize the sound and the visual notation of the tones he makes. All three must be correlated, so that the littlest student becomes aware of the 'look' of C, the sound of C, and the place on his instrument where C is to be found. (Parenthetically, my husband and I believe in teaching *sol-fège* with the *fixed-Do*; we were among the earliest to introduce the *fixed-Do* into this country, feeling it to be more natu-

ral and understandable than the *movable-Do*.) A sense of tonality can be taught and developed quite regardless of 'absolute pitch,' and an early introduction to the easiest kind of transposition serves to fix and stress tonal relationships. Rhythmic drills also are important. Then, in addition to his work at his own instrument, the student should be given opportunity to sing at sight from the printed page, beginning with the simplest melodies. Thus he progresses naturally to the cadences of keys and the relationship of intervals."

Correlating Piano Study

"The important thing," Mr. Mannes went on, "is that these early introductory studies be completely correlated. When he shuts the door of his 'piano-lesson room' and opens the door of his harmony class, the child should never feel that he is leaving one world to cope with another. On the contrary, his studies in

CLARA DAMROSCH MANNES

any one subject should clarify and amplify his work in all others—just as his studies in word-use and syntax amplify his understanding of what he reads. If we are to develop music from a 'lesson' or a 'parlor accomplishment' to the resource of living as it should be developed, we must present it completely and understandably. We believe that the amateur need not be amateurish! And the children enjoy it the complete way. By the time they are ready for the indispensable ensemble playing, they are sufficiently familiar with their alphabet of music to read and adjust to each other with readiness and pleasure. When the solving of problems (of notes, tonality, rhythm, and so on) becomes second nature, the drudgery has vanished from music study."

But music study, even the best of it, stands as the second step in a child's progress. "The best possible preparation for music study," said Mrs. Mannes, "is music-making in the home; the kind of music-making that springs, not from a desire to display a 'great' voice or a 'great' talent, but from the sheer, unquenchable love of doing the thing. When homes are silent, the teacher must stop to prepare the soil before he can even begin to sow the seeds of instruction. Where music lives as a member of the home group, this problem falls away; the teacher's work becomes lighter, the child's progress is surer and pleasanter, and the home itself is warmer through the sharing of mutual interests."

"I only wish that many might be as fortunate as I was! I cannot remember the time when reading music was not as natural a part of home as reading books, or conversing. Although my father was intensely occupied with his great work with the New York Symphony, the Oratorio Society, and the Metropolitan Opera, he always had time and interest to supervise our musical progress. On (Continued on Page 244)

ON SUNDAY, APRIL 2, the "Eighth Symphony" of the Russian composer, Dmitri Shostakovich, will be given its Western Hemisphere première over the nationwide Columbia Network by the Philharmonic-Symphony Orchestra of New York, under the direction of Artur Rodzinski. If publicity can make an event, this initial performance of the Shostakovich "Eighth" should assuredly be quite an occasion. For the work was widely publicized before it was even begun. Negotiations for its American première over the Columbia Broadcasting System Network were begun in the summer of 1942, before the composer had a note of the symphony on paper. Discussions with Shostakovich were started by Larry Lesueur, then CBS corre-

A Famous Radio Debut

by Alfred Lindsay Morgan

could concentrate to better advantage on his new work. There he worked in a room furnished with only a table and a chair. But, despite the fact that Shostakovich sought the peace and quiet of a rural retreat, he did not forget the conflict of his people or the spirit of "the attack" of his fighting countrymen.

American radio this past year has been distinguished by many first performances of unusual works of music. Leopold Stokowski in his recent twelve broadcasts with the NBC Symphony Orchestra, which terminated on February 27, has been a leading spirit in the presentation of new works. His service to modern composers has been particularly commendable; it has resulted in many works being performed over the air which listeners in many sections of the country might otherwise not have heard for an interminable length of time.

Serge Koussevitzky, enterprising director of the Boston Symphony, has also given radio listeners opportunities to hear some fine new scores. In his broadcast of February 26 (Blue Network), the eminent conductor gave the first performance of Alexander Gretchaninoff's new *Ecumenical Mass*, a work dedicated to the universalization of the Roman, Greek, and Protestant religions. Tied in with National Brotherhood Week, this Mass was, indeed, a timely presentation. The composer has stated he was inspired by the "universal meaning of the churches"—surely, a worthy cause in these troubled times. His in-

tention has been to create a "Mass in which there would be the combined character of the Eastern and Western Churches." Employing the traditional Roman Catholic pattern, the text of the Mass is in Latin. The performance was a most distinguished one with the Boston Symphony Orchestra and its famous conductor, as well as Maria Kurenko (soprano), Dorothy Cornish (contralto), Roland Hayes (tenor), and Robert Hall Collins (bass).

On April 15 Koussevitzky will present the first performance of the "Sixth Symphony" by Roy Harris, the American composer. Harris was commissioned last May by the Blue Network to write this work in the interests of American culture, following the world-wide

acclaim of his "Fifth Symphony," which was dedicated to the people of the Soviet Union. Harris' "Sixth Symphony" honors our War Heroes; it is based on Lincoln's famous Gettysburg speech, and dedicated to the fighting men and women of America on all the battle fronts. Its scheduled première falls on the seventy-ninth anniversary of Lincoln's death. This symphony is in four movements; the first of which, subtitled "Awakening," is a *Prelude* which reflects the opening passage of Lincoln's speech; the second, called "Conflict," is a *Fantasy* which dramatizes war; the third, "Dedication," is a long *Chorale* of dedication to the dead; and the fourth, subtitled "Affirmation," reflects the mood of strong faith in mankind that we find voiced in the last paragraph of Lincoln's speech.

Roy Harris has long been an admirer of Lincoln. "His shadow," he says, "hovered over my life from childhood. This was, I suppose, inevitable, for the very simple reason that my birthday fell on the national holiday honoring Lincoln's birth, which meant that on that day, school was dismissed. . . . As we mature in America, from childhood to manhood, we gradually begin to realize that Lincoln was the personification of a human ideal, an ideal for Freedom, which had to be fought for, bled for, and lived for. And so, in seeking to compose a symphony worthy of our great crisis, I, too, have turned to one of the great moments in the history of our nation for guidance. In Lincoln's Gettysburg speech I find the classic expression of that great cycle which always attends any progress in the intellectual or spiritual growth of people: (1) awakening; (2) conflict of the old against the new; (3) terrible suffering resulting from that conflict; and (4) the triumph of the new over the old, which is the affirmation of the eternal youth of the human spirit. We are in the midst of that progress now, and each of us must contribute to its solution according to our own endowments and opportunities. In this spirit, I offer my 'Sixth Symphony.'"

Thus, it will be noted that American radio this month becomes the medium through which two notable premières will take place—two new symphonies by noted contemporary composers—Shostakovich and Harris. And through these two works, two different composers will express their reactions to the world of conflict and the spirit of their own peoples. It is significant that these two world-premières are heard over the free radio of a free people.

Maestro Arturo Toscanini returned on March 5 to conduct the NBC Symphony Orchestra for its last six programs of the winter season. Honoring the memory of George Gershwin for the third time in two seasons, Toscanini presented the composer's "Concerto in F" in his last program for March, with Oscar Levant as piano soloist. Levant's name is widely associated with the Gershwin "Concerto," and he is regarded by many as the foremost interpreter of the composer's music. He was a close friend of Gershwin's and played the "Concerto" at the last Gershwin concert in New York before the death of the man who is accredited with making "a respectable lady out of jazz." Toscanini's programs were not announced at the time of writing, but we can all look forward to his remaining presentations with the assurance that they will be among the major musical treats of the year.

At the end of January, the Philadelphia Orchestra began a series of Saturday afternoon concerts over the Columbia Network (3:30 to 4:30 P.M., EWT). It will be recalled that the Philadelphia Orchestra was scheduled to give a series (Continued on Page 252)

RADIO

"FORWARD MARCH WITH MUSIC"

WRITTEN WITH THE BATON

In the literature of all tongues there are certain fundamental principles of writing which are common to all. One of these principles has to do with the point of view—that is, the vantage point from which the writer surveys the field with which his work is concerned. A great orchestral conductor has viewed the musical scene and presents fresh and distinctive phases of the art. Leopold Stokowski, London born (1882), with a Polish father and an Irish mother, and educated largely in England (he also studied for a time at the Paris *Conservatoire*) began his professional life as an organist at St. James' in Piccadilly, London. He then came to New York, where he took the position of choirmaster and organist at St. Bartholomew's P. E. Church (1905-1908). Later he determined to become an orchestral conductor and made his debut in London. From the start of his career he has looked upon the art of music, not as an isolated form of artistic speech, but as a part of the universal form of expression. Walter Pater probably presented this thought best in "The Renaissance" when he wrote, "All art constantly aspires toward a condition of music."

Dr. Stokowski's successes with the Cincinnati Orchestra and notably with the Philadelphia Orchestra, which many famous masters, including Rachmaninoff, declared to be the finest of all orchestras, raised him to the pinnacle of fame in that field. This brought him in contact with most of the great musicians of his time, and in subsequent years, through wide travels and artistic excursions in other areas related to music, his point of view was broadened to such an extent that his opinions expressed in his new book, "Music for All of Us," command wide attention.

The book races from episodes and illustrations from Palestrina to Schoenberg; and from Zworykin and television to Lamaist monasteries in Tibet (where, Dr. Stokowski writes, the chanting of the monks made "one of the most fascinating sounds I have ever heard"), and thence to the music of the Negroid aborigines of Java.

LEOPOLD STOKOWSKI

Photo by Halseman

Although no one in America has done more to bring out the new and daring works of modern composers, he never has forsaken the fundamental appeal of the great classics, as is evidenced by his own labors in making masterly transcriptions for orchestra of the works of Bach. Anyone with a knowledge of musical fundamentals and musical notation may upholster his musical knowledge and enhance his musical joys through this book, which is one of the most original and informative volumes upon music the writer has seen. At times apparently discursive, the objectives of the book are very clear, when one has completed it.

Dr. Stokowski in "Music for All of Us" aims clearly

at making certain fundamentals, about which the music lover may have a more or less vague conception, stand out with a sharpness that will enable him to enjoy any worthy piece of music with more understanding and pleasure. The book is unusually concise and is not cluttered with the technological verbiage that a less widely experienced musician might be tempted to employ. There is no "show off" in it. Mr. Stokowski has forgotten academic erudition and writes with the fluency and grace with which he conducts the orchestra without the baton.

OHIO PIONEERS

The life of an active college is always a romance because of its human experiments in youth. Particularly interesting is the graphic story of a peculiarly distinctive institution, Ohio's "Oberlin," which opened its doors as Oberlin Collegiate Institute in 1834 and became Oberlin College in 1850. Those pioneer Yankee zealots, fired with broad religious, scholastic, and patriotic ideals, became the hub of a gigantic educational wheel that has actually spread all over the earth and touched the advancement of civilization. The abolitionist sentiment was very strong, and the institution was known for its liberality and sustained common sense.

It was one of the first of American colleges in which music was given serious consideration as an important educational subject. The influence of the conservatory in American musical history is monumental.

A History of Oberlin College from its Foundation through the Civil War, by Robert Samuel Fletcher, which in Vol. I covers the origin of the College, is an unusually scholarly presentation of the subject in that it traces the movements which led to the foundation of this notable institution. Volume I does not concern itself, to any extent, with its musical achievements, which came into being largely after the Civil War.

"FORWARD MARCH WITH MUSIC"

The Etude Music Lover's Bookshelf

Any book here reviewed may be secured from THE ETUDE MUSIC MAGAZINE at the price given plus postage.

by B. Meredith Cadman

THE MUSIC LOVER'S HANDBOOK

This eight hundred seventeen page *pasticcio* of articles by various well-known authors upon all manner of musical topics, put together with the editor's able discussions of subjects needed to give continuity to such a work, is, in a sense, a kind of personal scrap book, a *vadem mecum*, in which Elie Siegmeister has essayed to cover a vast field of musical information. There are some one hundred fifty selections; a few entirely new, but many extracted from previously published works by musicians and writers with a very wide variety of musical experiences. These range alphabetically from Lawrence Abbott to Ralph Vaughan Williams. They include such widely separated personalities as Louis Armstrong, Benny Goodman, Aaron Copland, George P. Upton, Hugo Leichtentritt, George Gershwin, Olin Downes, Béla Bartók, Carl Engel, Carlos Chavez, C. Hubert H. Parry, Cecil Sharp, Deems Taylor, and Dmitri Shostakovich. The catholicity of the work makes certain that there is something to interest everyone. The volume should also be very valuable for special reference purposes. The sections tell in general the main purposes of the book: I. Fiddle Strings and Ballads (Folk Music); II. How Music is Made; III. In the Concert Hall; IV. High C's and Piouettes; V. Meet the Composers; VI. In Our Time;

VII. Music in America.

HOW TO MAKE AND PLAY A SHEPHERD PIPE

The present popularity of the Shepherd Pipe is due largely to the fact that those who are promoting it insist upon having the players make their own instruments. In other words, they make their own toys. This in itself is an important psychological factor in juvenile training.

Teachers looking for a pleasant novelty will find this pamphlet, prepared by a noted musical educator, a simple and interesting introduction to the Shepherd's Pipe, with its fascinating kindergarten possibilities. This little pamphlet has an important mission.

Liszt

IS THERE a Liszt style? . . . "Yes, indeed," snorts the cynic. "To two portions of lush sentimentality add three parts of hollow bombast, mix with ample doses of rippling runs, cascading *cadenzas*, and blustering octaves; shake well together, flavor with essence of tune-sirup, top with a gypsy cherry, and hurl the mess violently at the audience. . . . Voila! You have the perfect recipe for Liszt."

Making allowances for hyperbole, this expresses the conviction of many musicians concerning the works of Franz Liszt. Yet, in spite of the army of his detractors, Liszt's music has persisted for almost a century. Why is this? Can it be, as in the case of Tchaikovsky, that Liszt possesses a kind of earthy, or if you prefer, vulgar, vitality which assures his power over audiences? Or is it because he was such a topnotch composer for the piano? Certainly no one has written more pianistically, more brilliantly, more sympathetically for the instrument. Pianists love to play Liszt. His music fits the hand so perfectly; it explores and exploits the keyboard with the minimum of hazard and the maximum of effect.

I am convinced that much of Liszt's "cheapness" is due to the treatment his music receives from pianists and students. His compositions, far from being studied as music, are usually used as vehicles for technical display, and thus degenerate into the "war-horse" category, retaining popularity for a few years or a generation, then dropping out, to be replaced by newer battle steeds.

The Rigoletto Paraphrase

The *Rigoletto Paraphrase* is a case in point. Twenty years ago pianists, great and small, played it night and day in a perpetual relay; today it is forgotten. Yet, if you will examine it, you will rediscover a delightful piece of music, graciously written, smartly tailored, well worth a place in your repertoire. But it must be viewed in a new light. Instead of a "show-off" piece, you must consider the florid passages as unobtrusive reinforcements of Verdi's thematic foundation. Liszt has ornamented and enriched these lovely tunes, the better to adapt them to the sonorities of the piano. The scales, octaves, and *cadenzas* are there to serve the themes, not to overwhelm them. As a piano composition it needs no apology. Like many another Liszt piece, treated musically it makes a satisfying and permanent addition to any pianist's repertoire.

Liszt retains much of the original musical texture and feeling of the famous "Rigoletto Quartet" (*Act III* of the opera); the amorous pleading of the Duke (Measure 18) as he sings with gushing sentimentality, "Oh, Fairest Daughter of the Graces, I implore thee, with one tender word to restore me from the pangs of unrequited love"; the ironic interruptions of Maddalena (Measures 33, 35, 37, 39, and so on) as she chatters, "Oh so! I laugh to think how many hearts have already been broken by your moonstruck words"; the short, impassioned phrases of Gilda (Measure 69), "My heart—is crushed—for he—is false," as she accuses the Duke of betraying her, of breaking her heart. Even if the venge-

Correspondents with this Department are requested to limit Letters to One Hundred and Fifty Words.

ful savagery of the hunchback clown, *Rigoletto*, is missing, these three moods—the Duke's lovesick declaration, *Maddalena's* skeptical running comment and *Gilda's* despairing cries, are enough to give enormous vitality to the scene.

In numbering the measures, if care is taken to include the bar lines of the various *cadenzas* (as in the Schirmer and Ditson Editions), the *Paraphrase* contains exactly one hundred measures.

The mood of the introduction is capricious and coquettish. None of it should be played louder than *mf*, most of it from *p* to *pp*. Treated as gossamer cobweb—played as delicately and insouciantly as possible, it makes a perfect foil for the Duke's tune. Timid souls may play the octaves in Measures 1 and 3 with both hands. Measure 3 is more *rubato* and softer than Measure 1; the "hold" in Measure 4 longer than the one in Measure 2; no pedal in Measures 5 and 6; soft, sharp, *staccato* in the right hand. In Measures 7 and 8, as well as 9 and 10, swift, relaxed placement is essential, with careful preparation before each hand plays. Measure 15 should not sound "notey"; each *arpeggio* must give the effect of an inverted, *arpeggiated* chord.

The chief theme (Measure 18)—for which I advise the tempo of $j=56-60$, not only gives an ideal opportunity to turn on the rich, dark, "chocolate" flavor of the piano, but also offers a fine illustration of the necessity for sensitive treatment of repeated melody tunes. For instance, the three *A-flats* at the beginning must be given different stresses, the first (played *mf*) being the loudest. Avoid accenting the last, even though it comes at the beginning of the measure. The second is played unobtrusively, almost like a thirty-second note. Phrase the last *A-flat* scrupulously with the first *D-flat*; the last two *D-flats* and the "slide" make a smooth, progressive *crescendo* to the *F*; pause after this *F* and play the last two notes of the phrase very softly. *Arpeggiate* the accompanying chords (*ppp*)

The Teacher's Round Table

Mus. Doc.
Noted Pianist
and Music Educator

like a light breeze over harp strings. Play the repetition of the first phrase softer and freer.

Maddalena's bantering phrases (Measures 33, 35, 37, 39) must always be played lightly, prettily *staccato* with damper pedal, and rather freely. . . . Hold wrists high for all sixths and octaves, especially for the minor-sixth passage in Measures 44, 45, and 46. The best fingering for this *cadenza* uses the fourth finger on all black keys. If necessary, small hands may omit the lower left-hand notes, playing a simple, descending chromatic scale instead of the sixths. Practice this *cadenza* for a long time with hands separately. Think three beats to each octave, and be sure you know the first notes of each beat. As you play the left hand say audibly these words:

Ex. 1

The tempo of the variation (Measure 47) should be approximately that of the original theme, but there is no harm in taking it slower ($j=104-112$). Only very capable pianists should attempt to play it at $j=116-120$, and then very freely and flexibly, of course. The fingering of all passages is to be scrupulously adhered to; practice these in short pattern impulses,

Ex. 2

single handed and *senza pedale*. Again, unless you know the exact right-hand notes on which each beat begins in Measures 54-57, you haven't memorized the passages thoroughly, and will not play them securely.

Throughout these pages the melody must ring out ardently above the silver filigree (*pianissimo*!) of the right hand. Even *Maddalena's* comments must not intrude. Don't forget that the fireworks are only the setting for the glowing velvet of the melody. Save your sparkle and crackle for the coda.

After the *molto ritardando* (*ff*) at the end of the *cadenza* in Measure 68, begin *Gilda's* pathetic air, ("My heart—is crushed—for he—is false—") softly and throbbingly ($j=60-69$); and don't *crescendo* much or play too *forte* in Measures 73-76. The difficult variation figure (Measure 77) must be practiced with finger octaves—wrist held high and quiet octaves played by thumb and fifth (or fourth) fingers with only the slightest arm aid—like shaking your fingers gently but swiftly out of your sleeve. Practice in impulses (softly without pedal), accenting the last repeated note of each impulse thus:

Ex. 3

To achieve clarity, speed, and endurance you must practice these measures (77-85) daily for many weeks; slowly, fast, softly, loudly, in short and long patterns, hands singly and together. Passionate brilliance must be achieved in Measures 83-84.

Don't let Measures 85-88 sag. Here's a chance to show how stunningly you can *crescendo* a simple chromatic scale! . . . Diminish and *ritard* at the end of Measure 88, but do not subside too quickly. Practice the octaves in Measure 92 first in impulses of two notes; then in patterns of threes (major seconds) and twos (minor seconds), thus:

Ex. 4

Disregard the *ff* in Measures 95 and 96; play the octaves lightly and as fast as possible. Measures 97-100 are, of course, *ff*; the final chord is more effectively played thus:

Ex. 5

Other Liszt Pieces

For other less-played Liszt compositions I advise Round Tablers to examine these in the "moderately difficult" grade: *Canzonetta del Salvatore Rosa*; *Fifth Rhapsody*; *Consolation, No. 2* (E major); *Au Lac de Wallenstadt*; *To the Evening Star* from "Tannhäuser"; *Sposalizio*; *Soiree de Vienne No. 6*.

The following are much harder; all are rewarding technically and make stunning effects:

From Liszt-Paganini "Etudes":

ETHELWYNNE KINGSBURY
As she appears today

LOOK AT THE EXUBERANT, triumphant expression in the photograph of Ethelwynne Kingsbury, taken on muleback in 1927 after she had climbed to the top of the Breithorn in the Italian Alps, and you will forget your own petty stumbling blocks and troubles and learn that happiness, success, and health are largely a state of mind. Her rich, clear voice and radiant smile have been a thrill to thousands.

As in the case of President Franklin Delano Roosevelt, a difficult obstacle such as a mountain was merely something to climb. It aroused her ambition and quickened her spirit. Unlike President Roosevelt, her great obstacle came when she was a child of ten, while that of the President came when he was nearly forty years of age. She was obliged to prepare herself from the start with a handicap which she accepted with magnificent spirit.

One of Miss Kingsbury's favorite songs is Manzuca's *I Love Life*. Throngs are uplifted when she sings this exalting composition with her full, sweet, soprano voice. She is frequently a visitor at the Michael Dowling School for Crippled Children. The little folks look forward to her singing with rejoicing and hope. Because of the beauty, dignity, and significance of her personality and art she has been particularly in demand at weddings.

Miss Kingsbury resides in a sunny studio apartment, decorated so as to reflect the infectious joy of life which she is successful in bringing to her enthusiastic students. These students know that through her brightness, optimism, courage, and inspiration they get something far more than simply a vocal lesson. Life's dissonances are removed from puzzled, discouraged, fear-filled, and lonely lives. Harmony, adjustment, and courage are instilled, not merely by words but by her own electrifying example.

When asked to discuss her unusual theories regarding voice study, she said:

"One of the greatest obstacles the young person has to surmount is self-pity. He must banish, at the very start, all thought that he cannot do things because he has 'no opportunities,' 'no breaks.' He must remember that the power house of his success is founded on thinking right and enlisting higher powers. He must see facts instead of fears. Therefore, my first step was to realize that one of the worst things I could do was to invite or even expect special consideration because of my handicap. I asked no more than that my work and my life should be placed upon the same basis as that of anyone else. I considered my blessings and not my obstacles. What if I had had no ambition, no gifts—or worse, some mental, pathological condition which would have made it impossible for me to realize my ambition! There is nothing so crippling to character as self-pity. The student who feels in any

Rolling Her Way to Triumph

How a Girl with a Gift "Arrived" by the Wheel-Chair Route

From a Conference with

Ethelwynne Kingsbury

Successful Vocal Teacher

President of the Minnesota Federation of Music Clubs

SECURED EXPRESSLY FOR THE ETUDE BY DR. ANNIE S. GREENWOOD

Omnes tamen omnia vincit (*Courage conquers all things*) runs the line from Ovid's "Epistulae ex Ponto." Here is a case of courage, character, and persistence which has been a thrill to thousands. Ethelwynne Kingsbury, President of the Minnesota Federation of Music Clubs and one of the foremost vocal teachers and singers of Minneapolis, is an example of triumph over apparently insurmountable obstacles. When ten years old she was accidentally thrown from a hammock. Complete paralysis from the waist down was the result, and since then she has never taken a step. Of necessity, her life has been spent in a wheel chair. Nothing daunted, this has not prevented her from living a life of rich and joyous accomplishment. This is one of the most stirring "Struggle" biographies THE ETUDE has ever presented.—Editor's Note.

way that he is not getting a square deal from Fate or from society rarely will get a better deal until he changes his mind. We all have our obstacles, and most of the fun of life comes in the ceaseless game of overcoming them.

The First Consideration

"First of all, the voice is the only 'thinking' musical instrument. The entire vocal apparatus, except for the lungs, is adjacent to the human brain. A thought generated in the brain is reflected instantly in the voice. Therefore, the singer's first consideration must be that before a fine tone can exist, he must have a lofty tone ideal in his brain. He must hear incessantly tonal ideals of infinite beauty, so that he can build in his own musical imagination the tonal idea he hopes to attain.

"Second, he never must forget that he himself is the vocal instrument. Anything that affects his nerves, his digestion, and his physical body, affects his voice; and he must learn how to vanquish physical ills, or sooner or later they will be evident in his voice. If his mental and bodily conditions are fine, if his conception of tone is beautiful and distinctive, if he is willing to spend the time in patiently learning the musical and technical aspects of singing, and if he has the right natural voice, he may go far.

"He must start with determination. If a singer says and believes he can do a thing he has made a splendid beginning. Music is a severe (Continued on Page 246)

ETHELWYNNE KINGSBURY

After she had made her triumphant ascent of the Breithorn in Italy

Reaching Fame the Hard Way

An Interview with

Jan Peerce

Distinguished American Tenor
A Leading Artist of the Metropolitan Opera Co.

SECURED EXPRESSLY FOR THE ETUDE BY STEPHEN WEST

STILL IN HIS EARLY THIRTIES, Jan Peerce stands well within the portals of fame, and the road traveled to arrive there is the hard one. His recent debut at the Metropolitan Opera resulted directly from the record he had made for himself during some ten years of work in radio, concert, and at the Radio City Music Hall. The fact that Metropolitan stars are not usually chosen from radio and motion picture theaters makes Mr. Peerce's case something of an extra tribute to him. To put it plainly, Jan Peerce was so good and his personal following so vast that the Metropolitan could not afford to overlook him. He attained both his status and his following through his own efforts. He has had no scholarships, no subsidies, no "boosts," no "lifts." He confides quite frankly that he would have enjoyed all of these ten years ago. Lacking them, however, he set out with an artistic capital of determination, hard work, faith in himself, and appreciation of the encouragement of his wife and family. Today, Jan Peerce looks back with gratitude that things happened as they did. He believes that an ability to follow the hard road is part of what is needed to forge a solid career.

"There is a definite gain in fighting your own way," contends Mr. Peerce. "Shakespeare knew what he was talking about when he said that the uses of adversity are sweet! Later, when the good things come, one appreciates them more deeply and learns to accept them with the same humility with which he accepted the disappointments that went before. I began my career as a violinist and often had to play *obbligati* for singers who were earning plaudits and who, I felt, were no better than I should be if I had had the advantages of vocal training. You may be sure that, when at last I was able to have vocal lessons, I valued them more highly and took them more seriously than I might have done had they been thrust upon me as a gift of someone else's generosity.

Experience Counts

"Finally, I got my chance at singing through 'Roxy.' When he opened the great Radio City Music Hall, I was featured on the opening program. And then, when the great night came, it was found that the program was too long and my number was taken out! I walked the streets that night in a fog of gloom. For weeks I had been living for the occasion that was to make my name; announcements were out; my family and friends were waiting to hear me—and my songs were omitted! When, months later, I was finally given featured billing on that fine program, you may be sure I appreciated it!

"My advice to young singers is—get all the experience you can, in any sort of theater, in any sort of work, provided only that it is worthy of the name of truly good music. Never lower your artistic standards for the sake of an engagement; but within the scope of those standards, don't let a lack of 'glamour' scare you off. Most of my experience was gained singing in the stage shows at the Music Hall, and I consider it the greatest asset I could have had. I had the advantage of singing with a first-rate symphony orchestra under

the splendid direction of Erno Rapee; I learned the feeling of audience reactions; and I had unequaled drill in repertoire. The Music Hall, I know, is unique; its standards of training and performances are higher than those of the average motion picture theater. But the point is that similar advantages (even if on a smaller scale) may be found in other theaters, and the young singer will serve his own interests by investigating them—notwithstanding the fact that they are neither the Metropolitan Opera nor Carnegie Hall. Training in music is to be had wherever truly musical standards obtain, regardless of 'glamour'.

"In approaching the actual problems of the singer, I prefer to speak in the most general terms only. The details of voice production and projection are far too individual to permit of long-distance counsels. There is no disagreement about what the fundamentals of good singing are—breath support, resonance, freedom. But only the wise teacher knows how to adapt and apply these fundamentals to the individual throats, minds, and temperaments of his pupils. I cannot, therefore, tell you 'how to sing.' I can, however, call attention to certain points that have been, and are, of assistance to me.

Important Points

"The young singer should convince himself, through expert and aware counsels, that he really possesses the voice, the talent, and the intelligence requisite for an enduring career in art. Hence, the choice of his advisers is of utmost importance. Wise friends will try to convince him that *voice alone* is not nearly enough to build his career. He must possess good common sense; that mysterious quality of communicative vitality that convinces and moves people; and, above all, a firm musical background. One of the greatest mistakes a young singer can make is to concentrate on vocal work alone. Let him learn *music*—all branches of it!

"It is of great importance for the singer to master at least one instrument. My own early work in violin study has been of the greatest help to me. And how, you may ask, does a knowledge of the violin help me to sing a better performance of *Rigoletto*? By making me more intimately aware of problems of tone, projection, ensemble coöperation, rhythm, dynamics—all of which are problems, not of singing, but of *music*. Finally, the young singer needs patience. He needs to realize that artistic work is more important than any goal to which it may lead; that the lack of it may find him unprepared when his big opportunity comes.

"As to purely vocal problems, I prefer not to give advice. That is for the teacher. Instead, suppose I review a few points that I consider important in my own work. The first of these points, in my opinion, touches breath control and diction. Tone can be no better than the breathing habits that give it life. Diction is as important as voice itself. I always strive to make both as free and as natural as possible. In my student days, I devoted much time and care to the acquisition of clear enunciation without the slight-

JAN PEECE

est distortion of the face and lips. Towards this end, I have practiced before a mirror, first *saying* words and syllables in ordinary speech, then *singing* them, and making certain that the use and position of my organs of speech were as free and as natural in singing as in talking.

"As the basis of all my vocal work, I try to find my way back to that absolute naturalness of vocal emission that allowed me, as a baby, to produce cries that filled the house! Without 'tricks' or self-consciousness as to 'method,' I let my voice ring out as God meant it to when he put it into my throat. Above all, I have tried to master the art of *listening to myself*. This is as important as it is difficult, since most of us incline to hear ourselves in terms of the effect we *want* to produce. In getting away from this, in trying to hear ourselves as we *really do* sound, we ourselves become aware of any threatening difficulties of projection. Complete naturalness in singing has always been one of my best aids in achieving and maintaining an even scale.

"But vocal production is only the beginning of satisfactory vocal performance. What people want to hear is not a high C, but a message. If that musical message includes a high C in its expression, the tone must be well managed—but the message itself comes first. Interpretation means the conveying of the message of music with enough truth and vitality to make others gather it in. Mere singing signifies little unless it makes people *feel*. Naturally, the singer must be the first to feel the message of his song—you cannot convince others about something on which you yourself are vague! Therefore, to sing of love, of pain, of homesickness, of joy, you must have experienced those emotions yourself and you must go back to the truth of your own experience to make your interpretation ring true.

"When you learn a song, don't stop at merely thinking about its meaning—try to live it, to recall similar experiences of your own, to re-create the truth of the feeling. The ability to accomplish this depends partly on an inborn gift of expression, partly on study, and partly on actual experience in living. The older you grow and the more deeply you come to know the sum-total of emotion and disappointment and happiness that makes up life itself, the more satisfying your interpretations will be. Young folks tend to stress the value of singing for its own sake. I know that when I began to sing (in my childhood), I watched out for the high notes, the *crescendi*, the big effects, and when I could master them with a certain degree of bravura, I thought I was singing well! Experience has taught me better. Today I know that the real depth and meaning of a song—any song—can be released only by delving (Continued on Page 238)

What Is "Bel Canto," Anyhow?

A Masterly Discussion of "Dear Old Voice Production"

by Francis Rogers

Professor of Singing,
Juilliard School of Music

Francis Rogers is one of the world's most distinguished teachers of the art of singing. After being graduated from Harvard University he studied for one year at the New England Conservatory and then went to Paris (Bouhy) and Florence (Vannucini) for further study. After concert tours (one with Marcella Sembrich) and a year in opera, he became a teacher. Since 1924 he has been a member of the faculty of the Juilliard Graduate School of Music. The following is the second of a short series of scholarly and essentially practical articles giving the background of the historical development of bel canto. (Another article will appear next month.) The Etude considers these articles so important and so "meaty" that we trust that our vocal teacher readers will insist upon their pupils becoming familiar with them.

Part Two

MUSIC IN ENGLAND fared but ill under Cromwell's iron hand, though it is said that he himself loved a pretty ditty. But with the restoration of Charles to the throne in 1660, Italian opera with Italian singers invaded England, much to the pleasure of the aristocracy. Among these singers was Pier Francesco Tosi, whose name deserves an honorable place in the history of song.

Tosi was born in Italy about 1650, and as a *castrato* sang successfully in the important opera houses on the Continent of Europe. His later years he spent in London, in high repute first as a singer and then as a teacher. In 1723 he published in London his *Opinioni de' cantori antichi e moderni, o sieno osservazioni sopra il canto figurato*. This he dedicated to the Earl of Peterborough, "General of the Marines of Great Britain," a picturesque gentleman who made a great stir in the fashionable world when he married Anastasia Robinson, one of Handel's early prima donnas.

Tosi's book was translated into English and published in 1742 under the title, "Observations on the Florid Song, or Sentiments on the Ancient and Modern Singers." It is, so far as I know, the first of its kind, and gives a pretty good idea of what was expected of a singer two centuries ago. There is more in it about musicianship than about the technical training of the voice, but there is much that is as good advice to singers today as it was to those of young Handel's day. We quote word for word from the edition in translation some of the most significant paragraphs:

The teacher "should have a Manner of instructing, which may seem rather an Entertainment, than a Lesson; with the happy Talent to show the Ability of the Singer to Advantage and conceal his Imperfections; a Master that is possessed of the above-mentioned Qualifications is capable of teaching; with them he will raise a Desire to study; will correct Errors with a Reason; and by Examples incite a Taste to imitate him."

"The best Singer in the World continues to study, and persists in it as much to maintain his Reputation as he did to acquire it."

"He that studies Singing must consider that Praise or Disgrace depends very much on his Voice, which if he has a Mind to preserve, he must abstain from all Manners of Disasters and all violent Diversions."

"Let him continually, by himself, use his Voice to a Velocity of Motion, if he thinks to have a command over it, and that he may not go by the Name of a pathetic Singer."

"Let him not omit frequently to put forth, and to stop, the Voice, that it may always be at his Command."

"Singing requires so strict an Application, that one

MANUEL GARCIA (SON)

must study with the Mind, when one cannot with the Voice."

"When he studies his Lesson at Home, let him sometimes sing before a Looking-Glass, not to be enamored with his own Person, but to avoid those convulsive Motions of the Body, or of the Face (for so I call the Grimaces of an affected Singer) which when once they have took footing, never leave him."

"I can truly say, that I have never in my life heard a Singer own the Truth and say, 'I'm very well today'; they reserve the unseasonable Confession to the next

VOICE

Day, when they make no Difficulty to say, 'In all my Days my Voice was never in better Order than it was Yesterday.'

"The Doctrine of the School of those Professors, whom by way of reproach, some mistaken Persons call *Ancients*. Observe carefully its Rules, examine strictly its Precepts, and, if not blinded by Prejudice, you will see that this School ought to sing in Tune, to put forth the Voice, to make the Words understood, to express, to use proper Gestures, to perform in Time, to vary on its Movement, to compose, and to study the Pathetic, in which alone Taste and Judgment triumph. Confront this School with yours, and if its Precepts should not be sufficient to instruct you, learn what's wanting from the Moderns."

"One who has not a good ear should not undertake to instruct or to sing."

"Voce di Petto (chest voice) is a full voice, which comes from the Breast by Strength."

"Voce di Testa (head voice) comes more from the Throat."

"Falsetto is a feigned voice which is entirely formed in the Throat, has more Volubility than any, but of no Substance."

"Feigned and natural Voices should be blended."

Tosi asserts that the art of singing is in decadence and, to correct this sad state of affairs, the student should revert to the standards of the "ancients."

Porpora Traditions

Porpora, the most celebrated teacher of the eighteenth century, was born within a few months of Bach and Handel. He was also a popular composer, a conductor, and an impresario. Although he is reputed to have been an incomparable master of *bel canto*, he never committed his theories and practices to writing, and we inherit only the tradition of his extraordinary competence. It is often recounted that he kept one of his most gifted pupils, Caffarelli, working on a few pages of vocalises for several years, and then dismissed him, saying, "Go, my boy, you are now ready to conquer the world!" (Believe it, or not!)

Another Italian master who deserves commemoration is Giambattista Mancini (1716-1800) who, after a long experience as singer and teacher, published in Vienna in 1777 (in Italian) "Practical Reflections on the Figurative Art of Singing." He had been a pupil of Bernacchi (of the renowned Bologna School), of Padre Martini, and, perhaps, of Tosi, to whom he refers more than once with deference. Like Tosi, he sighs for the passing of "the good old days." He, too, has much more to say about musicianship than about vocal technique. A representative utterance of Mancini's was: "A teacher must know every way in which to handle his pupils, in order to train each individual voice; for he must know the right remedy for each voice."

A Valuable Inheritance

At the end of the eighteenth century the art of singing, as Mancini declared, was at a low level; the French Revolution and the military domination of Napoleon were most unfavorable to artistic development of any sort. The arrival of Manuel Garcia in Paris from Spain in 1808 was really an epoch-making event, for it signaled in operatic Europe the debut of a family that became a potent influence for good throughout the entire century. (I have already told, in THE ETUDE, the story of "The Amazing Garcias.") Garcia, a great creative singer, devoted the last years of his very active life to building up in London and Paris a school of *bel canto* in which many, even if not most, of the great singers of the time were trained. He did not commit his methods of teaching to writing, but his value as a teacher is well attested by the list of his distinguished pupils. His son Manuel, (1805-1906) was destined by his father for the career of an opera singer, but he had no liking for the stage, and from the age of twenty-five devoted his inordinately long life to the teaching of the so-called Garcia Method, which to this very day exists in name, even if not in actual fact.

Young Manuel was exceptionally well fitted for the career he had chosen. He inherited from his father the great traditions of *bel* (Continued on Page 238)

FROM Bach TO Gershwin

TWO and one half CENTURIES of MUSIC up to 1944

AN UNUSUAL MUSICAL CALENDAR

The Musical Calendar presented herewith was published in larger form in colors, not by a musical institution, but by the musically enthusiastic managing director of the famous Bismarck Hotel of Chicago, Mr. Otto K. Eitel, who has permitted us to reprint it. Dr. Rudolph Ganz, Director of the Chicago Musical College, called this to our attention. Dr. Hans Rosenwald, musicologist, helped Mr. Eitel in the preparation of the chart.

"FORWARD MARCH WITH MUSIC"

Making the Church Musical Message More Emphatic

Religious Services of Tomorrow Require Careful Planning

by Richard Maxwell

Richard Maxwell was born in Mansfield, Ohio, September 12, 1897. His academic work was done at Kenyon College, where he received the degrees of A.B. and M.A. Later he studied voice with noted teachers including Edwardo Sacerdote, Vittorio Trevison, Titta Ruffo, Ella Bachus Behr, Dr. Mario Marafioti, Mrs. Robert Blackman, and Frederic W. Bristol. He has been soloist at many metropolitan churches. In 1928 he entered the field of radio, giving particular attention to the music of religious services as heard over the air. In this connection he has been soloist on the radio religious programs of such famous clergymen as Dr. S. Parkes Cadman, Dr. Daniel Poling, Dr. Harry Emerson Fosdick, Dr. Frederick Keller Stamm, and Dr. Ralph W. Sockman. His voice thus has been heard by untold millions. Together with Mr. William Wirges, organist, pianist, arranger, and for fifteen years Staff Conductor of the National Broadcasting Company, and Mr. George Shackley, Musical Director of WOR for ten years, he has collaborated in various movements to produce programs for the Church and for the air leading to more effective musical religious work. Mr. Shackley, who is associated with Mr. Maxwell, is also Musical Director of Radio for the Federal Council of the Churches of Christ of America.

FEW OF US have any conception of the vast number of people in all parts of our country who, by force of circumstances, are unable to attend churches and are dependent upon services they hear over the radio. In the early days of radio some shortsighted persons thought that these services would affect the Church disadvantageously. Quite the contrary has been the result. Thousands of casual listeners hear these programs and are reminded of their forgotten Church obligations and the privileges of Church attendance, and find their way back to their ecclesiastical moorings with joy and satisfaction. More than this, the high spiritual standards, the musical excellence, the human appeal, and the appropriateness of the arrangement of the radio Church programs, leading to a definite, well-rounded message, have had an unquestionably beneficial effect upon the structure of the services of many churches. One of the reasons why so many Church services "fall down" is that in a vast number of instances there is a very slight bond between the minister and the choir-master. Frequently the choir-master does not even know the topic of the clergyman's sermon until the morning of the service. The result is that many incongruous situations arise, and both the minister and the choir-master at times are placed in ludicrous positions.

The choir-master should go over the subject of the sermon very carefully, as far in advance as possible, and spend an adequate amount of time in selecting material. Thus he may learn the trend and philosophy of the minister's thought and can do his best to make a real contribution to the beauty and spiritual content of what the pastoral ideal presents.

Projecting the Thought

Not until the choir-master realizes that the text of a sacred song is just as important as the music, can he begin to render proper assistance in planning an inspiring church service. He must imbue the members of the choir with the thought that to sing the notes of the music correctly and to sing the words distinctly are still not enough. The great singer is the one who projects a *thought* so that it reaches the heart of every listener. The speaker who merely repeats words is certainly no orator, in or out of the pulpit, but the

clergyman who can present his prayers and convictions so devoutly and sincerely that all who hear them vibrate with his thoughts, is a true servant of God.

We all have been to services in which the music has left us cold and unmoved because it was presented in a perfunctory way. If performers in a theater followed the same method, they would find themselves out of employment in a few days.

While the connection between the theater and the Church was once a very direct one, in these days the stage is looked upon as secular and profane, and the Church as sacred and holy. In most instances this connotation still holds. However, the Church of today has much to learn from the theater, without making the Church in any way theatrical.

The Church service should have its suspense, its moments of absorbing devotion, and its climaxes. This cannot be done without careful planning and liberal rehearsals in which the clergyman and the music director take joint part. Of course, when there is perfect under-

standing and coöperation between the minister and the musical director, the results should improve immediately. The minister should acquaint himself with the texts of the sacred songs. Many of these texts are cheap and incongruous. More than this, they lack a real human appeal. I have listened in churches to hymns with verses so archaic that I could scarcely refrain from laughter. Surely those who sing such hymns in this day cannot mean them!

On the other hand, there is, in the musical literature of the Church, music with so little spiritual warmth that it reminds one of carved Carrara marble. This music makes no more impression upon the congregation than would vocal exercises, and is more reminiscent of the conservatory than of the temple. These works may be magnificent from an artistic and musical standpoint, but the Church is not a concert hall; it is wholly a place for soul regeneration.

Spiritual Refreshment

Now this must not be taken as a plea for mediocre or cheap music. Nothing but the best is good enough for the Sanctuary of God. Fortunately, there are a vast number of masterpieces which, when properly presented, are exalting or comforting or beneficial, and otherwise refreshing spiritually.

In my experience in Church and in radio I have had the wonderful opportunity to be associated with such eminent clergymen as Dr. Poling, Dr. Fosdick, Dr. Sockman, Dr. Stamm, the late Dr. Cadman, and many others. I have heard over and over again of conversions that have been evidences of hearts and souls which, when moved like Saul, were brought to higher spiritual levels by music when it has been associated with a divine message.

One great mistake that some clergymen, choir-masters, and organists make is that they subcon-

sciously still look upon music from the standpoint of entertainment. In some churches in the East, as well as in the Far West, questionable leaders have employed music with hardly more restraint than the manager of a Follies show. Performances that are virtually spectacles—put on with the lights, costumes, and stage effects worthy of a Broadway producer—have been the result.

But you say, "Have not the Salvation Army bands, playing on the sidewalks, drawn attention to their services through music and led to the saving of souls?" Unquestionably they have, and the humble sincerity of the folks who shake the tambourine or bang the drum is rarely questioned. Their appeal to those they desire to reach is through a very direct approach, through bringing stimulation to lives that often, unfortunately, are very drab. Many of these Salvation Army evangelists have had the Spirit of God in their hearts and have been very much exalted thereby. The music of the Salvation

Army has been greatly improved. This organization, however, is not to be compared with the mercenary exploiters of religion, who always are willing to put a circus in the pulpit if it can put shekels on the collection plate. To sincere and sensible people such frauds are a matter for contempt and disgust.

The Church always must be looked upon as a dignified, hallowed temple for worship, whether that church is represented by (Continued on Page 240)

RICHARD MAXWELL

ORGAN

"FORWARD MARCH WITH MUSIC"

Teaching Stringed Instruments

by Gilbert Ross

In the preceding article under this title, the writer considered the close interrelationship of primary, secondary, and higher education in the development of stringed instrument players and discussed the first of five shortcomings—lack of allegiance to the string medium and string literature—which might be held to account for the failure of the string program at the several educational levels. The second of these inadequacies is the serious lack of basic knowledge.

AN ALARMING DEARTH of fundamental knowledge in the string teacher being turned out by the universities is the rule rather than the exception. Too many aspiring stringed instrumentalists are seeking to rear the edifice of true mastery without the security of a sound foundation—a task almost as futile as attempting to build a house by starting with the roof. The theory of string mastery—and by that I mean *knowing how*—is neither difficult to project nor to grasp, and there is no valid reason why the student should be left to discover these things for himself, or not at all.

Let us say that this theory—this *knowing how*—will preempt less than ten per cent of the total time required in the attainment of a reasonable mastery, and that the remaining ninety per cent or more will be devoted to what I like to call the “practice of string mastery”—which means *doing*. Nevertheless, it is precisely this theory which makes possible the practice. The theory of string mastery alone will never make a fiddler, but the accomplishment of such mastery will be forever beyond the reach of those who are trying to attain it without knowing how. This unfortunate situation is never the fault of the student. The responsibility reposes solely with the teacher. When the student becomes teacher, however, he assumes this responsibility, and it is now his student who becomes the innocent victim of inadequate instruction, and who must ultimately, if at all, learn by the miserable trial-and-error method.

The third shortcoming is the lack of ability to impart knowledge and illustrate the application of this knowledge. All the knowledge in the world will be of no avail to the student if the teacher is unable to project it in lucid, understandable language with simple analogy and clear, practical illustrations. I think we all know of the violinist who himself plays well indeed, but who cannot explain how he does it. Such individuals may be excellent artists, but they are decidedly not good teachers. It can no longer be assumed that a concert violinist, even of considerable distinction, will necessarily be a good teacher—as some universities, to their own regret, are beginning to learn. The imparting of knowledge presupposes a thorough analysis of processes and the formulation of this material into an orderly sequence.

Lack of Patience, Sympathy, and Understanding

These are the intangibles that serve to implement all other factors. Disinterest and indifference are deadly. Impatience and hair-tearing are futile. The bored teacher who is mentally miles away will, more surely than anything else, kill student interest and enthusiasm and drive him away from music. Even the ordinarily saving graces of profound knowledge and ability to impart it will prove insufficient to overcome the utter lifelessness of the “do-not-care” attitude. Nor will browbeating be any more conducive to progress. The terrified student cannot deliver.

The Fifth Shortcoming

The failure to exercise sufficient selectivity in the makeup of stringed-instrument classes is a serious neglect. For it is recognized that one of the great problems of string training in the secondary schools concerns the high instrumental mortality rate. Failure to exercise greater care in selection and teacher-indifference are jointly responsible for this high mortality rate among players in the early stage. Many of the youngsters who have begun the study of a stringed instrument and then have abandoned it should never have started in the first place and would not have

done so under a more carefully supervised procedure of selection. Standard musical aptitude tests are available to all, and a greater utilization of these would eliminate the potential failures and reduce to a minimum the adverse effect on string-class morale resulting from the casual “quitting” that so often brands a stringed-instrument class as a losing proposition.

A supplementary cause of high string-class mortality is failure on the part of the instructor to grasp the true function of the stringed-instrument class, understand its grand strategy, and seize, as it were, the long-term opportunities and benefits thus available. The stringed-instrument class should be exploratory only, seeking to turn the soil, but leaving to the hands of others the solicitous care and cultivation of the tender young sprouts.

Class Lesson Limitation

A year or so in class is enough. The student then requires the individual attention possible only through private instruction. Students should be encouraged to get out of class and seek an able private teacher as soon as the preliminaries are over and interest has been securely anchored. Unfortunately, the “able” private teacher is frequently missing from the community scene today. Many teachers have been shockingly lazy, unprogressive in approach, and loath to provide a commodity that will bear inspection and scrutiny. Unlike many wind-instrument teachers who have achieved success with youth by experimenting, exploring the possibilities of new teaching techniques, and taking advantage of various psychological factors and implications at the secondary school level, they have failed to keep pace with the temper and procedures in contemporary education. Some stringed-instrument teachers have been rigidly bound and restricted by narrow “schools” and “methods,” and have found it difficult or impossible to cast aside these absurdities in favor of a far more realistic and rewarding instrumental eclecticism.

A greater recognition of the private teacher by the secondary schools would serve to stimulate the teacher to better effort. Today the work of such teachers is too frequently unrewarded by the schools, both in the matter of confidence and respect and the more formal angle of school credits. Greater effort at collaboration between the school and the local private teacher would tend to banish existing feelings of mutual distrust and suspicion and establish a working rapport that is now often missing.

A questionable grade of string teaching in the universities is in no sense alone responsible for the deficiencies and errors-of-omission outlined above.

“FORWARD MARCH WITH MUSIC”

Certainly some of the trouble arises from a general confusion of objectives in the music education curriculum. This confusion does not exist so much in the thinking and planning of music education faculties as it does in the minds of those teachers, recruited from applied music faculties, who are directly responsible for the actual string training of music education majors. Under the tremendous scope of music education demands and their own peculiarities, it is futile to give students in this program the same string training, or the same type of string training that would accrue, for example, to majors in violin or violoncello. In the latter case we are trying to create performers of real distinction and in the former we are not.

Let us consider for a moment: what are the practical and realistic demands on the music education trainee with a stringed-instrument major when he takes over a high school assignment? Will he be expected to play long *concertos* from memory, give violin recitals, perform the solo Bach “Sonatas,” teach advanced students? Not at all. He will have to organize an orchestra and perhaps a string quartet or two, and he will have to help these young musicians in a hundred different ways. He will have to organize and teach classes in beginning violin, viola, violoncello, and double bass. Now just how will the ability to play extended works from memory aid him in this work? If he could do that, too, so much the better, but this is out of the question for all but the most gifted and versatile. The limited time available for string study in the music education program should be utilized to fit the student for precisely that which he will be called upon to do. The objectives of this training, therefore, should be revised in the light of practical reality and unhesitatingly separated from those of a straight string major, the objectives of which will remain the development of superlative performance.

Do not misunderstand me. I put no premium on mediocrity. I am simply proposing that string training in music education be cut to fit the assignment. I am advocating a reconsidered approach in which a more specialized mastery would be sought and better results obtained. Just as the pianist going out into the secondary school should be well prepared in sight-reading, accompanying, transposing, and so forth, so should the string specialist be prepared to cope more fully and more successfully with the specific problems that will be encountered.

I propose consideration for a program of string training for music education students at the university level which would assure a high proficiency in the following:

1. The theory and principles of string mastery.
2. String pedagogy and the art of imparting knowledge.
3. Fingerboard facility adequate to the proper illustration of the theory and principles of string mastery.
4. Knowledge of the string literature.

Proficiency in No. 1 should be acquired through a short, illustrated course. Proficiency in No. 2 should be acquired through a brief but concentrated course on the techniques of imparting the knowledge gained in No. 1. Proficiency in No. 3 should be acquired through practical string study. What should be aimed at in this is to prepare the student to illustrate with full conviction the principles of position, relaxation, bow control, *legato*, tone production, on-the-string bowings (*martelé*, and so forth), off-the-string bowings (controlled bouncing bow, *spiccato*, and so on), shifting, *vibrato*, and the synchronization of right and left-hand technic. It should (Continued on Page 240)

THE ETUDE

Music in a College Training Detachment

by Mark Biddle

Director of Instrumental Music
Knox College, Galesburg, Illinois

A GREAT DEAL has been written about the musical units of the different branches of the service. Every camp has its own military bands as well as dance bands, drum and bugle corps, glee clubs, tonette bands, and so forth. Much also has been written about the vital role these musical organizations are playing in keeping up the morale of the men in uniform. The government has spent millions of dollars installing Hammond organs, pianos, and other instruments in the camps to keep up the spirits of the boys, in addition to the activities of the military band. Lieutenant-Colonel Howard C. Bronson in an article not long ago wrote, “We are learning, as our allies learned, that music is one of the vital elements of a fighting army.” We all seem to be agreed then, that music is very necessary in the army.

The problem in which we are interested at present is: What about the musical organizations to help keep up the spirits of the boys in the hundreds of college training programs of the AAF Training Command all over the country? As far as we can determine nothing has been written about what is being done, if anything, for this large group of men who are in training in our colleges.

At Knox College in Galesburg, Illinois, we have tried to do something in the way of musical activities for the men who are stationed here. Not only for the men who play and sing, but for the entertainment of the entire detachment. Let me start at the beginning.

A few months ago the Army Air Corps selected Knox

ing Detachment Band for the duration. The response was quite good and a number of instruments were secured. We also asked the men who played instruments and had these instruments at home to send for them. In a short time enough instruments had been secured and the band was on its way.

Rehearsals under Difficulties

Rehearsals had to take place in the late afternoon after classes, military drill, and physical training were finished. These men have a long, hard day beginning at 5:45 A.M. and ending at 10:00 P.M., but they have always been anxious to rehearse, no matter how tired. After an hour of rehearsal they are relaxed and in much better spirits.

There have been several hundred men from forty different states in this band since its organization. We have had men who have been members of professional symphony orchestras, large university bands, and small high school bands. We have continually tried to encourage the players who have come from

every month. One month we lost the entire trombone section of five men, and another time the entire percussion section. This has happened several times where the entire section was leaving together. We have lost as many as eighteen men from the band at one time, and we lose an average of about fourteen men every month. We never know what players we will get from the new group coming in, but we have found that it depends a great deal upon the part of the country from which the men originally came. The question always is: Will we get five snare drummers and five piccolo players—when we need saxophones—or what? So far we have been very fortunate in maintaining a fairly good instrumentation.

The band plays for retreat every day, and for the official parade and inspection on Saturday morning. In addition, the 302nd College Training Detachment Band has played eight concerts and given several radio broadcasts since its organization. The band plays music of all types and of all grades of difficulty. We try to select for our concerts music that will appeal to the listener and at the same time keep up a fairly high standard. From this band, small dance orchestras have been organized to play at the Service Men's Center on Saturday nights and for detachment dances. A men's glee club also was organized and a number of men find relaxation and mental uplift from participating in this musical organization.

A Vital Influence

Are these organizations of value to the detachment? Major Blue and the present commanding officer, Captain Edward Dunn, both have been enthusiastic about the band. They realize the vital role and influence that it is exerting on the men stationed here. The Saturday morning review would be dead and colorless without the band. An inspecting officer from Texas found the band so excellent that he included a special paragraph in his official report commenting and praising the work of the band.

The band has its own set of student officers and is under the same military discipline as are other flights in the detachment.

What do the men in the band think of this organization? I shall quote from only two of many letters received from men after they have been sent on to a classification center.

“A valuable part of the training which I received as a member of the 302nd College Training Detachment Band, in addition to the enjoyment, the relaxation, and the opportunity to continue my musical interests, was the valuable addition to my knowledge of military procedure as regards parades, reviews, retreat, and other military traditions.”

“I want to say that it was really something to have been a member of the 302nd College Training Detachment Band. It was an honor and pleasure and I'll never forget it. Many thanks for the enjoyable times spent with the band and the opportunity to further my musical interests. It was swell.”

No one knows what these young men will have to go through before this war is over. If we have given them some enjoyable hours and lifted their spirits through the playing and singing of music, then we think it was well worth all the time and effort involved in maintaining these organizations.

302nd COLLEGE TRAINING DETACHMENT BAND (AIR CORPS).
KNOX COLLEGE, GALESBURG, ILLINOIS. MARK BIDDLE, DIRECTOR.

College as one of its colleges to train men for the Air Corps. Six hundred men were sent here to comprise the 302nd College Training Detachment (Aircrew) and were under the command of Major Julian Blue. Major Blue was very anxious that we have a band, not only for use in the official parades but also for the entertainment and morale of all the men in the detachment. He asked me to try to organize such a band.

There were a number of problems involved. First, where would we get instruments for the men to play? The College owned a number of instruments and the college band was rapidly diminishing in numbers, owing to men being called into the service. However, the College did not own clarinets, cornets, trombones, and saxophones in sufficient numbers to outfit a band. We finally decided to call upon the Service Men's Center in Galesburg for help. They appealed to the citizens of Galesburg, through the local paper, for band instruments to be loaned to the 302nd College Train-

smaller schools, because we have learned to realize what this activity means to these young men, most of whom have not been out of high school or college bands many months. To say they enjoy playing again is putting it mildly. Some of them have been so anxious to play that, immediately after finding we had a band here, they have wired to their homes in Florida, New York, California, and elsewhere for their instruments.

The big problem is one of replacements. After a period of time, one-fifth of the detachment leaves and another group comes to take its place. High school band directors have their worries when they lose their seniors each year, but we lose men from the band

“FORWARD MARCH WITH MUSIC”

APRIL, 1944

An All-Night Singin' in the Mountain Backwoods

by John Frank Machen

In the vast expanses of our country many events occur which are of first importance in the districts in which they take place but which are little known to others in the "outside world." The DeKalb Times of Ft. Payne, Alabama, gives the following graphic pictures of religious musical gatherings of the devout people of the mountain sections. The influence of such meetings is far-reaching.—Editor's Note.

THERE WAS SCARCELY a voice within fifty miles of here that was not hoarse today, and the first all-night singing convention was counted a success. The rugged mountains around were still quivering from the constant ringing pressure of thousands of voices that cried the praises of the Lord from early Saturday night until the dawn began streaking across the sky Sunday morning.

"Heaven fills my soul, fills my soul with inspiration," the voices cried out. And: "Awake, my soul, arise and sing glad praises unto the Savior's name."

"This town of forty-five hundred swelled almost threefold for the festival of voices. In horses and bugles, in tumbledown trucks, in shining new limousines, and on foot they came from all the crannies in the mountains and all the dips in the valleys.

"They began coming early Saturday morning and by evening there were no parking places to be had within blocks of the unpainted, sprawling wooden tabernacle. They came, sleepy infants and bright-eyed, gray-haired octogenarians, all in their Sunday-go-to-meeting clothes.

"The ladies' gingham dresses were severely pressed and the men's pants bore creases as sharp as razors. Weeks before the boys had made dates for the occasion with their best girls.

"The crowd overran the three thousand seats in the tabernacle. The younger ones sat in the elders' laps, stood in the sawdust aisles, and perched themselves on the window sills. The doorways were jammed, and the devout stood twelve deep on the outside around the tabernacle, continually moving around and around, like ants around a lump of sugar trying to get closer and closer. Many, unable ever to gain entrance, had to be content to listen to the loud speakers that blared from the sides of the building.

"When babies dozed off they were placed in the aisles or under the pews to sleep. Everybody held a songbook in one hand and a fan in the other. The fans, advertising everything from furniture to snuff, never ceased their rhythmic to-and-fro movement before the steaming faces.

"It was so hot that the shirts of the men became wringing wet and stuck to their backs and chests. The shirts of some of the song leaders ripped and peeled off when they moved their arms in front of them to the beat of the music.

A Test for Song Leaders

"There were three huge barrels of ice water in the rear of the tabernacle supplying a crowded waiting line. The song leaders worked in shifts. When one became exhausted there was always another to move instantly into his place.

"There was a note of carnival jocularly in the crowd. It seemed eager to laugh. The song leaders made quips in introducing one another. But the singing was always in dead seriousness, and even the youngest sang out his words with loud and grim fer-

vor. No song was ever sung twice. Three songbooks were used.

"Refreshment time at midnight was the only brief intermission when all singing stopped. Ushers tossed out sandwiches into the crowd as they did the songbooks. There was no charge for the sandwiches nor for the songbooks. There was no admission price and not even any contributions. The whole thing was strictly nonsectarian and without commercial tinge. All of those came who felt like singing songs to the Lord.

"None could remember ever hearing of an all-night singing. It was the idea of I. E. Farmer, who sells cold drinks here. He figured it would be cooler at night and besides more people could attend.

"The local merchants donated the sandwiches and Mr. Farmer and several others pitched in and paid for the transportation costs of visiting quartets and soloists.

"Having disposed of the sandwiches, the crowd got its second wind and took on where it left off singing praises of the Lord."

Various Influences at Work

Many converging factors seem to have entered into the local situation: First, in the frontier days, the geographical isolation from outside influences and cultural centers. Second, the early vehement reaction to established church litanies. Third, the adverse living

conditions of the frontier, which made impossible either time or energy for cultural objectives. Fourth, the holding to custom and usage with the well-known tenacity of the English, of whom Allegheny mountaineers are lineal descendants. And last, perhaps because of these four, the influence of A. J. Showalter, a remarkable gospel musical pioneer in the South.

These hill folk were thoroughly dominated by the Calvinistic teachings of the comparatively new and rapidly growing Protestant churches. John Calvin and his followers were utterly opposed to anything artistic or studiously beautiful in public worship. According to their views, acts of worship should be extemporaneous and unpremeditated. Only a metrical version of the Psalms was available for congregational singing, and this was permissible only when used without instruments. Some of these reactionists went so far as to renounce the singing of the Psalms because they were not the inspiration of the moment. Even the Puritans wondered if singing in church was not an exercise which turned the mind from God. The Reverend John Cotton investigated the question carefully under four main heads and six subheads, and he cited Scriptural authority to show that Paul and Silas (Acts XVI, 25) had sung a Psalm in prison. Cotton therefore concluded that the Psalms might be sung in church.

Group Singing in the South

The intense interest in group singing in the South is largely the outgrowth of the pioneer teaching and publishing propaganda of Mr. A. J. Showalter (originally Schowalder) and Benjamin S. Unseld, who was Showalter's collaborator. Showalter was born at Cherry Grove, Rockingham County, Virginia, in 1858. He died in 1924. His father was a singing school teacher. Showalter and Unseld used, but were not the first to use, the shaped notes to assist the eye in reading. The shapes were simply superimposed upon the standard score, the shapes being

the characters for Do, Re, Mi, Fa, Sol, La, Ti, and Do, respectively.

Showalter's promotion scheme was an efficacious one, as he supplemented his teaching and publishing by personal appearances as a singer and leader of singing. Later, when the keener business promoters broke with the Showalter Publishing Company and started their own publishing houses, he met the difficulty by organizing traveling quartets which sang only the publications of their employer. These more than covered their own expenses by giving paid concerts—an advertising specialty unnecessary as long as he owned the monopoly house. All the competing firms exploiting gospel hymn publications now have their own quartets on the road the year round. These are very much in demand.

Showalter's most profitable idea, however, was the publishing of the songs of his students. These scores came to be a considerable amount of each yearbook. They were published as a "favor" to the students and, as a consequence, cost the publisher nothing for the manuscripts. "Prof." Showalter was a prolific writer, having developed the unvarying habit of going down to the office early and "writing a couple of songs before breakfast!" So great a number of these songs was written that, according to Mr. Shope, Manager of the Showalter Publishing Company, there are thousands yet unpublished.

Some idea of the man's popularity may be had from the fact that at the Southeastern Fair of (Continued on Page 240)

Meditation

Joseph Straub Freeman Lewis

1. O, Thou in whose presence my soul takes delight, On whom in affliction I call;
2. Where dost Thou, dear Shepherd, rest with Thy sheep, To feed them in pastures of love?
3. O, why should I wail - der an al-ien from Thee, Or cry in the des-ert for bread?
4. Re - store, my dear Sav-iour, the light of Thy face, Thy soul-cheer-ing comfort impart;

My comfort by day and my song in the night, My hope, my sal - va-tion, my all.
Say, why in the valley of death should I weep, Or alone in this wil-der-ness rove?
Thy foes will rejoice when my sorrows they see, And smile at the tears I have shed.
And let the sweet tokens of pardoning grace, Bring joy to my des - o - late heart.

This example of what has been known as "buckwheat notation" is reprinted from The Music Teacher and Home Magazine by permission of the publishers, The A. J. Showalter Co.

"FORWARD MARCH WITH MUSIC"

Left-Hand Positions

Would you please help me with a problem? My left hand never feels comfortable. In the lower positions I feel that I am grabbing the neck, and in the higher positions my hand feels strained. Is there one correct position for the left hand, or should it change shape in different sorts of music? It does not seem to me that one can play different kinds of passages with the hand always in the same position. I studied for eleven years with four different teachers, and no two of them told me the same things about the left hand. If you could tell me what the correct position of the hand ought to be, it will help me a lot, for there is no one near here that I can study with. I am working on the "24 Studies of Dont, Op. 35," Gavini's "Studies," and the "Concerto in E minor" by Mendelssohn.—H. R., Idaho.

You are quite right, H. R., in thinking that no one position of the left hand is suitable for all types of playing. The experienced player adapts the shape of his hand to the type of passage he is playing at the moment. Furthermore, hands of different build will take slightly different shapes on the violin for the same passage. There are, however, certain fundamental principles which the good violinist rarely, if ever, violates, and it may help you if we discuss them at some length.

The basic shaping of the left hand in the first position, which should be taught to all beginners, is that in which the neck of the violin is supported by the first joint of the thumb and the knuckle of the first finger, with the thumb opposite this knuckle and the fingers curved over the strings. Many quite advanced players violate this principle by holding the thumb opposite the second, or even the third, finger. This faulty shaping of the hand not only induces fatigue and cramp in technical playing, but also is a frequent cause of the "grabbing" of which you speak. Nevertheless, it is taught as the correct hand position by many teachers.

Another fundamental principle of good teaching is that the first joint of the fingers (except the fourth finger) should be vertically above the fingerboard. This principle is absolutely sound, for it trains the fingers to be always over the strings they are playing on—an essential in all technical passage work. It is, however, often discarded by well-trained violinists who are seeking a more sensuous and expressive tone quality. In melodic passages, these players allow their fingers to lie somewhat flatter, so that the fleshy part of the finger is in contact with the string. This undoubtedly enhances the quality of the tone, and is to be recommended—but only to those who have acquired a thoroughly sound left-hand technique. As a matter of fact, the well-trained, advanced violinist can allow his left hand to take almost any shape that feels comfortable in melodic, expressive playing if, by doing so, he can give more eloquent expression to the music.

On the other hand, in all technical passages it is essential that the fingers move flexibly and accurately, and that they be able to exert an instantaneously strong pressure on the strings. If the violin is supported between the thumb and the first-finger knuckle, the extra effort required of the hand in technical playing will often transform this support into a definite grip, which inevitably will take a good deal of the strength from the finger grip. The hand, therefore, must assume a quite different shape. For

The Violinist's Forum

Conducted by

Harold Berkley

Prominent Teacher
and Conductor

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

passages in thirds or octaves, for rapid passages that call for frequent string crossings or frequent shifts, for chords in which the third or fourth fingers are on the lower strings, the thumb should lie back along the underside of the neck, with the knuckle of the first finger slightly away from the neck and the elbow well under the violin. If you play the so-called "Viotti chord"

with your hand held this way, you will have the ideal shape for technical playing.

This position of the hand brings the knuckles almost parallel with the strings, allows the fingers always to be over the strings on which they are to play, and renders good intonation much easier to achieve. If you do not use this shaping of the hand for technical playing in the lower positions, H. R., I earnestly advise you to acquire it, for it will solve many of your problems. Practice first, and slowly, the Study in D major, No. 34 by Kreutzer, and follow it with the one in F major, No. 33. Practice also the second and twelfth "Caprices" of Rode, for in such types of technic this shaping of the hand is an immense advantage. But do not infer that the first-finger knuckle must never, under any circumstances, touch the neck; it may, and frequently will, do so—the important thing is that it must not exert any pressure.

So far we have been considering how the hand should be shaped in the lower positions; other things must be considered when you are playing in the fifth position or higher.

There are many violinists who shape their hands excellently in the lower posi-

tions but who are nothing like so sound in the fifth, sixth, or seventh. Generally this is due to the manner in which the shift has been made. A shift from a low position to the fifth or higher should be prepared by moving the hand into the "technical" shaping described above—thumb under the neck, and so on—one or more notes before the shift is made. This allows the fingers to move in a straight line up the strings. When the hand arrives in the upper position at the end of the shift, the tip of the thumb should be at the end of the neck, so that the top of the string may be reached without further movement of the thumb. One frequently sees a player complete such a shift with his thumb hooked around the end of the neck and his fingers pushed forward into the required position. This not only endangers accuracy of intonation, but also precludes any real fluency of technic.

Having established a correct shaping of his hand in the first position, the player should endeavor to maintain the same relationship between hand, knuckles, and finger tips at least as high as the seventh position. Higher than this, most players will have to move the fingers up in front of the hand; but as one is rarely called upon to play rapidly across the four strings in any position above the seventh, the danger of faulty technic is slight.

You speak of a sense of strain in the upper positions, H. R.; this suggests to me that you do not have the thumb in the right place for such playing and that you have fallen into the habit of playing with the knuckles at least one position lower than the finger tips. It is a bad habit—get rid of it! Train yourself to play in the higher positions with the knuckles in the same position as the fingers—just as you do in the first position. You will play much more easily.

Dont and Gavini's are excellent practice material—particularly the Dont "Studies"—but I think you should practice etudes that call for greater fluency of technic. For a player of your apparent advancement there is nothing better than the first thirty of De Bériot's "60 Concert Studies"; they require constant shifting between the lower and higher positions. These studies are now available in an American edition and may be obtained through the publishers of THE ETUDE.

If the ideas I have sketched here are unfamiliar to you, it may take you a month or two to master this technic. But if you have the patience to do so you will, I think, be very pleased with the ease and fluency you will gain.

Tuning Troubles

I have trouble tuning my violin properly. The strings run down repeatedly and it is hard for me to get the fifths true. It is embarrassing and makes me nervous to have to spend five minutes tuning when I play before an audience. Can you give me any hints which would help? I tune my G and D strings by holding the head of the violin against my knee, but I have seen violinists tune them by wrapping their fingers round the head. Which is the best method?

—Miss L. G., Virginia.

It certainly is disturbing to be forced to spend a lot of time tuning when one is before an audience, and you will have the sympathy of all violinists who have experienced it. The best plan, of course, is to have the A sounded beforehand, and do your tuning off-stage. But as this is not always possible, it is well to give some thought to the things that make for quick and accurate tuning.

The first essential is a well-fitting set of pegs. If your pegs do not turn smoothly and easily, if they jerk and make ratchet-like sounds, you should take your violin to a good repairer and have him refit them. Most repairers sell a preparation which should be applied to the peg each time a string is changed; this helps the peg to work smoothly and also prevents wear and tear on the peg and peg-hole. It is possible to use a homemade mixture of chalk and graphite on the pegs; but mixing these properly is difficult and is best left to the repairer.

Another important factor is the way the strings lie in the peg-box. How often one sees the D and A strings crossing as they go over the saddle towards the pegs! This is a fatal weakness, and is the chief cause of strings running down when they are being tuned. The reason is that when these strings cross or approach one another in the peg-box, the pull of the string tends to pull the peg out. These strings should diverge in the peg-box, so that each goes towards the side from which its peg enters.

Also, the quality of the strings is highly important. All four must be "true" in vibration, or it will be impossible to tune them perfectly. Cheap strings are no economy; every violinist, from the youngest student, should have strings that are absolutely true, for false strings mean poor intonation.

As regards the actual technique of tuning, the surest way is to tune the string fairly sharp—even if it is slightly sharp to begin with—and then to let it down slowly and gently to the correct pitch. To prevent the string from running down, it is essential that the peg be pushed in at the same time it is being turned. Some players tune flat, and then up into the right note. This is not good, for a string that has been relaxed has a strong tendency to go flat again within a minute or two. Other violinists nervously turn the peg back and forth until, by good luck they happen on the proper pitch. This, too, is bad, for the more a string is disturbed the sooner it will go out of tune.

The only thing to be said against holding the scroll of the violin against the knee is that it looks awkward. To tune in playing position gives a more professional appearance, and the skill is worth acquiring. It is not difficult. The things to remember are that at least one finger

(Continued on Page 252)

An Old Dog Can Learn New Tricks!

I do not usually publish the many complimentary remarks that are made about my department, but I recently received a letter from a very young "Old Lady" that is so in line with my feeling about older people taking up music that I venture to present to my readers some excerpts.

"While I am not in the habit of writing 'fan letters,' I am sending you this little note to tell you how much I appreciate your page. I never miss reading it and I always get some help from it although some of it is beyond me. I have just reread the May number and I fully agree with you about 'feeling versus knowing.' 'How I wish that it might have been possible for me to continue piano lessons sixty-five years ago. But I had to stop and 'put my shoulder to the wheel,' to help care for the family. When I was past seventy-five I decided that I would begin again since I now have the leisure time, but I cannot sit up at the piano for more than a half-hour at a time and some days not at all, owing to a weak heart. But I still keep pegging away and have got so now that I can play Third Grade music—at least, to please myself!"

To which I reply with misty eyes, "God bless you, my dear, and may the Good Lord grant you many more years of life, and may they be filled with both the joy of making music and the peace and quiet of real serenity."

Kindergarten Music

Q. I should very much like to have you express your opinion about musical kindergarten work. I am not a music teacher but play the piano and understand music, and I have often wished that small children had a better opportunity to understand the beauty of music.—H. R.

A. If I understand you correctly you want to know what may be done in the kindergarten to start children on the path to musical ability and understanding. My answer is that there are three important things that children between four and six—or even younger—can do. The first is to learn to sing in tune and with good tone quality. This really ought to be started by the mother, who, in singing to her baby, encourages her baby to imitate her, at first on a single note or short phrase, but eventually on the entire song—which should of course be short, simple, and slow-moving in rhythm: a lullaby. But if the child has not learned to use his singing voice when he arrives at kindergarten or first grade, then the teacher will take him gently by the hand and lead him to the point where he can sing little songs with pure, sweet tone. The second item is rhythm, and if you want to place it first instead of second, I will not quarrel with you. This, too, may well be begun in the home, but if it has not been, the kindergarten teacher will play simple, rhythmic music on the piano and encourage the children to march, clap, swing, and so on, coaching them kindly until their movements are appropriate to the music. A rhythm band is a fine thing too, for here the children not only learn to make appropriate rhythmic responses, but they find out what kind of

Questions and Answers

Conducted by

Karl W. Gehrken

Mus. Doc.
Professor Emeritus
Oberlin College

Music Editor, Webster's New
International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

an instrument is suitable for a certain part of the music. Thus they become conscious of variety and appropriateness of tone quality. The third item is what is commonly called "creative music," and here the child is encouraged to make up little tunes to words that are supplied by the teacher or invented by the children themselves. This is good fun and it also leads in the direction of understanding music notation, for after the melody has been created and sung, the teacher will often record it on a blackboard or on paper, and the children will thus learn all sorts of things about the notes that stand for the music.

These things are not only the basis for musical instruction in the kindergarten, but they constitute the foundation of all early musical training, and if they are supplemented by frequent opportunities of listening to judiciously selected records of good music, and especially if this listening experience is correlated with the singing, rhythm training, and creative work, the teacher may rest assured that he is doing everything possible to give his children a good start in music appreciation.

What Is the Quarter Rest For?

Q. I am a piano teacher and would like to have you tell me how to explain clearly to my piano pupils the reason for the quarter rest being under the half notes in the music which I enclose. I know the half note is to be held.—S. A.

A. This little piece actually has three elements in its style of construction. First, there is the melody, which is actually a tune that you must "sing" on the piano; second, there is the fundamental bass which you are to play in very sustained fashion; and, third, there are the chords in the middle, sometimes on the second beat only, but often on the third beat as well. It is these chords that give the composition the feeling of being a dance, a waltz, and the piece would produce an altogether different effect if it were to be played in "hymn-tune style" with the full harmony on the first beat

2. Yes, these grace notes must be played, and exactly as written.

3. There are no turns in the *Allemande*. The ornament which you are evidently mistaking for a turn is an inverted mordent, or pralltriller. The shortest note over which it occurs in this dance is a sixteenth, and it would be executed as follows:

If it did occur over a thirty-second note, it would be performed in exactly the same manner as above, each note being only half as long.

4. These notes are to be played. Begin the first note of the arpeggio exactly on the first beat and play the entire group rather rapidly.

Moths in the Piano

Q. 1. I have discovered a moth on the felt in my piano. No great damage has been done yet. How can I get rid of them if there are more? What can be used to keep them out in the future?

2. I am trying to master *The Storm* by Henry Weber. On the seventh page, after the fire-bell passage, it changes to three-four time. This is written as if it were six-eight time and is very similar in melody to the opening measures. The last portion of the piece is in six-eight time. How is the passage in three-four time to be played?—F. G.

A. 1. Spray the felt dampers and hammers with one of the commercial moth sprays. If you will do this regularly once a week I believe you will never have any trouble with moths. Two or three little bags of moth balls hung near the felts will also act as a repellent.

2. The fire-bell passage is in four-four time. When you go to three-four keep the tempo the same; that is, play each quarter note in the three-four passage at the same rate as a quarter note in four-four. When you go from three-four to six-eight, again keep the tempo the same by making an eighth note in six-eight equal to an eighth note in three-four. You will thus be playing the figure of four thirty-second notes in the left hand at the same rate throughout the entire composition. The change from three-four to six-eight will, however, necessitate a change of accent, for in three-four a measure of six eighth notes will be accented thus;

while in six-eight it will be;

Which Is the Prettier?

Q. Could you give me an opinion as to which is the prettier, Grieg's *To Spring* or Sinding's *Rustle of Spring*? I think both are supremely pleasing and full of beauty.—H. P. H.

A. I do not wish to offend you and I am glad you like both of these fine old pieces so much; and yet your question makes me smile. So, in turn, I will make you smile by asking you which is prettier, a lake or a mountain. The answer is, of course, that it is impossible to compare them; and it is likewise impossible to compare two piano pieces.

CHILDREN who actually like to practice are scarcer than rooster's teeth, but most children like to play games and if we can make music seem like a game, more youngsters would find it fun and would want to play it to the finish.

Music should have a big place in every home to bolster up the family morale at all times. Many have found that the resort to music at the proper time in the home does much to sidetrack the harmful explosions of anger, fear, and "jitteryness." It is unfortunate to hear parents say, "I won't give Mary piano lessons any more because she just won't practice." Or, "Why should I waste my good money on Johnny's violin when I have to jaw at him all the time to make him practice?"

There might be any number of good reasons why Mary and Johnny won't practice. Perhaps Johnny has no ear for the violin. The instrument is entirely unsuited to his ability. He might do better with the trombone. Maybe Mary has a dull and uninteresting teacher whose methods are all wrong for that particular child. Perhaps Mary's and Johnny's parents take the wrong method of approach in this business of musical education, nagging the youngsters to distraction. Parents who might find a child ill with a perplexing malady do not throw up their hands. They keep seeking the remedy. If your child does not respond to the musical environment you have provided for him, don't let him make up your mind that he should stop. Keep on until you find the right instrument or the right teacher.

It is worth every ounce of effort to get a child to practice. However, nagging will not do it. A stated, definite time each day with a clock that strikes the time when the hour is over is a much better way. Few children are musical prodigies, but practically every child living has some spark of musical appreciation within him which, if properly watched, can flame into a power for good in his life. Children need to have their musical tendencies kept burning brightly.

Mother Should Help

One of my young daughters liked to play by ear, so much so that she took no interest in trying to learn music by notes until her teacher brought her a book in which learning the notes was a game. Then she began to put forth a little effort to familiarize herself

TWO STUDENTS WHO FOUND FUN IN MUSIC
Their names are Joan and Patricia Carroll

Music Should be Fun for Children

How Music Parties Made Practicing a Joy

by Karin Asbrand

with the notes as they appeared to her in the pages of her book, and to connect them with the piano. It was her introduction to the game of music. However, even a game will become stale and boring if there is no incentive ahead as an inspiration for proper and thorough learning, such as a mother's absorbing interest and complete understanding, occasional trips to good concerts, and the opportunity to "show off" once in a while.

Music is not beautiful until it becomes a finished product, until a child has learned to put his soul into it and to make it speak his own language to his listeners. He can learn this only by keeping at it, which usually means that mother must keep at it with him. It pays in the long run for a mother to sit in on the practice hour, not for the purpose of nagging and hectoring, but to listen and try to enjoy it, step by step. Even if the beginner's is a painful performance, it is always well to make the most of the accomplishment when a young child is trying hard to learn to play, and to close your ears to the off-key notes and rough spots. Some day you might have a virtuoso in this plodding little "pip-squeak" who is really trying to do his best. Encouragement makes all the difference in the world to him.

Lucky the youngster whose mother has some knowledge of music appreciation. However, the fact that you have not this accomplishment will not hinder your child from making progress. If he seems to take no interest in practicing, try the reward plan. A trip to a Pops Concert or an evening of Heifetz as a reward for an hour of constructive practice that shows results in a good lesson will often do wonders during that teen age. If you are not near a great music center, enlist the records or the radio. Prepare a little talk about the performer and about the works he is to play. Make a party of it. Have refreshments and see that the youngsters enjoy it. Reward them with some gift such as a pin in the form of some musical instrument, or a brand-new piece, but be sure it is full of melody. When a child feels himself that he is making progress, he will become more and more interested. Playing music, singing, and dancing are accomplishments that fill a real need in his life. Rhythm lifts his soul above himself and can help him over the hurdles of loneliness, self-consciousness, and all the difficult stages of growing up as nothing else can.

Uninterrupted Practice

It gives a child a feeling of prestige and personal satisfaction to be able to contribute to the entertainment of others. This feeling should never be thwarted or discouraged. In one home I noticed that Grandma had always forgotten her glasses upstairs, or that Mother needed a spool of thread or something at the store just when Lucy sat down to practice. She had to get up

and jump around so much that she began to lose interest in the piano. One day the child herself opened her mother's eyes. "I wish," she sighed, "that just once I could play a piece all the way through before you remembered that you had forgotten something." After that, Lucy's mother saw to it that she had at least half an hour of uninterrupted practice every day.

The whole family can enter into this game of music. Daddy may not be able to play a note, but he can enjoy a rhythm band with his youngsters and their neighborhood friends. Maybe he has never even learned to keep time, but he is never too old to learn, and the children can get many a merry moment while he is learning to manage the bells and cymbals, and a bond of friendship will be created between them which no power on earth can break. One simple process will lead to another still more difficult, and soon everybody will be experiencing a desire to learn more. However, it must be a regular thing, and not just something that we take up once in a while when there is nothing else to do, and lay down until we feel the urge again. The urge must be constantly stimulated.

If the actual study of music is not within easy reach of your family, perhaps you can form a community club with other mothers in your neighborhood and get a teacher to come on a certain day each week for lessons, both collective and private. There are excellent teachers who will give class lessons to children in groups of five or six, and who will make those lessons so interesting that the youngsters are inspired to go on and on. One teacher combined these lessons with little musical operettas in which the children learned all the fine rudiments of music in action singing, dancing, and playing. Each of them had a part. Some would learn to play the little tunes for the others to sing and dance. It was a game which they all could play, one in which each had an equal part.

Self-Analysis

If your child does not seem to like to practice, look at yourself first. Have you been too lax? Or have you gone to the other extreme and been too strict, expecting too much? Have you nagged constantly, creating in him an antipathy towards music rather than an attitude of enjoyment, which he must have? Have you seen that he had the chance for quiet, uninterrupted practice? Have you frequently reminded him how much the lessons cost you? Or have you praised rather than blamed, encouraged rather than berated? Every child has to be urged and encouraged to practice, because to him it is a chore and a bore, a bane to his existence. He likes to hear an accomplished pianist rattle the ivories, but if it does not come easily to him he wants none of it, for he has not yet learned that things do not "come easy" to many people. He has to go to school to learn anything. He has to take music lessons or he will never learn to play. He has to study to get good marks on his report card. He has to practice to become an accomplished musician. Without practicing, he can never even learn to entertain himself, to say nothing of others.

To threaten to stop the lessons is probably just what he wants, but what do you gain by it? You do not take him out of school because he does not do his homework or get A's on his report card. You find the cause instead and help him to study properly. So it is better to insist that music (Continued on Page 244)

THE SIX-FOOT-FOUR CONDUCTOR of the Baltimore Symphony Orchestra, recently approached in his dressing room at the Lyric Theatre in Baltimore during a rehearsal intermission, laughingly said, "Playing a concerto is fun—if you know the work thoroughly, every measure, every note!"

"To start with, we shall assume that the student has prepared the concerto carefully. He has worked over it until such time as he feels completely comfortable in every page. Technically, he must have solved all the problems—'cracked all the nuts,' as it were. It must lie so familiarly under his fingers that the music has become almost an integral part of his being. He should be able to play any portion of it at request and feel that no unexpected interruptions could possibly upset him. Until this phase of the cooperation is completed, the young pianist should not think of appearing with an orchestra.

"However, we shall assume, as I said, that the groundwork has been completely and well laid. Now, he must take the first step towards the ultimate collaboration by securing a pianist-friend—in most cases it will probably be his teacher—who will supply the second-piano part for rehearsal purposes. This second-piano part is a condensation of the orchestral accompaniment and will serve as a fairly satisfactory substitute during the early months of preparation. The soloist will thus become familiar with the rest of the tonal fabric surrounding his solo part, and the composition will begin to assume its true outlines.

"While the piano arrangement of the score is an adequate and economically sound substitute—after all, no student could afford to hire an orchestra for daily rehearsals—modern science has produced an even better one, provided the student has a phonograph or can borrow one. I have in mind the excellent series recently launched by one of the record manufacturers wherein the solo part is missing from the recording, which contains only the orchestral accompaniment. While this series is by no means complete so far as concertos are concerned, it is reasonable to believe that when wartime restrictions are removed, it will gradually be extended to include all of the standard works for piano and orchestra. By rehearsing his solo part to a recording of this nature, the student now becomes familiar with the true orchestral sound of the accompaniment, a vast improvement over the piano reduction which naturally is limited in its ability to simulate the coloring of the various orchestral instruments. What's more, the student is also given the benefit of a professional accompaniment founded on traditional interpretation, an important factor in the proper preparation of the work.

The Miniature Score Aids

"I would also suggest that the young soloist secure a miniature score of the concerto he is to present and familiarize himself with every measure of the orchestral score. This is highly important. No soloist can give a well-rounded performance unless he is thoroughly familiar with the work as a whole. As the student observes the various counter-melodies in the score, he must think 'oboe,' or 'clarinet,' or 'horn,' or

So You're Going to Play a Concerto!

An Interview with

Reginald Stewart

Distinguished Pianist-Conductor

SECURED EXPRESSLY FOR THE ETUDE BY CUSTAV KLEMM

Reginald Stewart, pianist, conductor, and conservatory director was born in Edinburgh, Scotland, April 20, 1900. He studied under Arthur Friedheim, Isidor Philipp, Nadia Boulanger, and Mark Hambourg. Then came a tour as a concert pianist in England, 1924, and in Canada, 1925. He conducted the London Symphony Orchestra in Albert Hall in 1930; and, in 1931, a series of symphony concerts over the Canadian radio network. He was the conductor of the British Broadcasting Company Symphony Orchestra in 1932; and also in that year was active as a piano recitalist in England. In 1933 Mr. Stewart formed the Bach Society of Toronto. In 1941 he was appointed director of the Peabody Conservatory of Music, Baltimore; followed, in 1942, by his appointment as conductor of the new Baltimore Symphony Orchestra. He has repeatedly conducted leading American symphony orchestras.—EDITOR'S NOTE.

REGINALD STEWART

This effective montage photograph shows the English-American piano virtuoso-conductor-educator in fanciful review

whatever other instrument is used to voice them.

"I have seen many young pianists momentarily confused when first appearing at rehearsal because an important counter-melody—which they have heard for so long only in the second-piano part—sounds so vastly different as it emerges from, say, the low register of a trombone.

"Let us suppose, now, that the pianist is all ready for his appearance with a large symphony orchestra. What's more, and even better, he has a definite engagement.

"It is not necessary to go into the several steps separating the readiness to appear and the actual engagement. That is a difficult gap to bridge. But

if the student's musical foundation is solid and he brings to his performance an engaging manner and sound musicianship, his opportunity will come. All he need worry about is to see that he is ready when that opportunity knocks!

"The young pianist will probably fret about how he is to make his playing and the playing of the orchestra a perfect whole. Should he make suggestions about the accompaniment, its volume, the tempos? Should the conductor follow him, or vice versa? He worries, and understandably so, about many problems that manage to solve themselves quite easily when rehearsal time arrives.

"As to tempos and interpretation, there is an easy way of handling this which, as a conductor, I have followed for many years. Before I rehearse the soloist I have him, in the case of a pianist, go through the concerto either here" (and he pointed to a piano across the room) "or at my office at the Peabody. Between us—we agree on the interpretation. With the score before me, we settle each

problem as it rears its thorny head. Sometimes there is none. But when one does arise, we discuss it and mutually agree on its solution. Naturally, in the case of a young pianist, making the first steps up that long ladder of a solo career, he would be wise to heed the counsel of older and more experienced heads. The conductor will be familiar with the traditional interpretation, and the young soloist should benefit by the advice he receives and accept it unquestioningly.

"It is only fair to warn the young pianist that he will find conductors whose natures are not too serene and who are otherwise possessed of many faults to which flesh is heir. Some conductors become imperious dictators, once the baton is in (Continued on Page 246)

Maestoso

Allegretto M.M. $\text{♩} = 102$

The first page of the musical score for 'Shower of Stars' features a piano introduction in 2/4 time. The right hand begins with a series of chords and arpeggios, while the left hand plays a simple harmonic accompaniment. The tempo is marked 'Allegretto M.M. 102'. The score includes various musical notations such as dynamics (p, f), articulation (accents), and fingerings. A section marked 'una corda' is indicated. The piece concludes with a 'To Coda' symbol.

The second page of the musical score continues the piece. It features a variety of musical techniques, including triplets, sixteenth-note runs, and dynamic contrasts. The tempo remains 'Allegretto'. The score includes markings for 'una corda', 'f marcato il basso', and 'leggiere'. The piece ends with a final flourish in the right hand.

WALTZ IN A FLAT FRANZ SCHUBERT, Op. 9, No. 2

This waltz (the second of Schubert's "First Waltzes") was written about a century and a quarter ago, when the composer was a very young man. It is wholly unlike the Viennese waltz of the Strauss epoch, or like the French salon waltz, which Chopin idealized. Brahms, in his waltzes, evidently emulated this type. This waltz should be played in a plaintive, appealing style. The original edition called it a "Waltz of Sorrow." Grade 3

The Technic of the Month

Conducted by Guy Maier

Prelude in F Major, Op. 28, No. 23

by Frédéric Chopin

WHEN YOU PLAY the F Major Prelude, you must "walk on air"; for this little masterpiece is not of the earth. It whisks the sky, skims the blue, brushes the heavens. The irrepressible James Humecker calls it "aerial, imponderable, like a sunshot spiderweb oscillating in the breeze of summer, its hues changing at every puff." . . . Yes, that's all very pleasant to read, but if you want to achieve all this whiffing and whisking you'll have to start with your feet planted gently on the ground; then with your torso "suspended" easily over the keyboard, and with featherweight elbow tips and high wrists directing supersensitive finger tips, you are ready for the take-off.

Now comes the riddle: How fast shall the Prelude be played? Some artists take it at a good clip; others play it quite leisurely. The reason for this confusion is, of course, the *Moderato* direction at the beginning. I am always sorry when composers employ this indication, for its ambiguity is all too apparent. *Moderato* can mean almost anything, depending on the temperament and equipment of the player. It may mean, "go as fast or as slow as you please." If this is so, why not just say instead, *a piacere*? . . . Or it may designate a kind of *allegro*; but why *allegro*? Couldn't it be *andante moderato* just as well? . . . And if it is indeed *allegro moderato* (as is generally conceded), does this mean that a faster or slower tempo than *allegro* is indicated? . . . I am convinced that it often means nothing at all. In other words, the composer himself couldn't decide on the tempo he wanted; so he's left it up to you entirely. . . . Here at last is the chance for the numerous breed of pianists who advocate "individual interpretation" to go into action. Hurrah! For once they can do as they please, and no one may gainsay them. . . . At any rate, for this Prelude your tempo guess is as good as mine.

The Prelude is an ideal study for light arm "roll" over a loose thumb. The convoluting broken chord figures make the free thumb and delicately poised elbow all the more imperative. Practice the piece hands separately for at least a week. Adhere strictly to the fingering given—otherwise you will soon be gasping in deep water! Note the alternate fingering submitted for the left hand of Measures 3, 7, and others, which some pianists (especially those with small hands) will prefer.

Don't play the "perpetual-motion" right hand with Czernylike precision, but *legatissimo*, with occasional, scarcely perceptible breathings, lovely, subtle hesitations, and gentle *ritards* (see especially Measures 4, 8, 12, 16). May I reiterate that this right hand will sound well only if your floating arm rolls easily over a loose thumb?

To combine the hands is a pesky job. The number of trills you can play in the left hand of Measures 2, 6, 10, and so on, depends of course on your trill expertness and the speed at which you take the Prelude. At first it is advisable to practice playing the turn only, thus:

Ex. 1

Then add a single trill to the turn, which is the way I advise finally playing this left hand:

Ex. 2

Some pianists may manage to slide in another trill, but this is difficult to negotiate:

Ex. 3

A slight, lingering stress on the B-flats in Measures 3, 11, 19, and 20 (also the F's in Measure 7) will help to shape the rhythm and phrase contours of these lovely arabesques:

Ex. 4

That surprising insertion of the left-hand E-flat in the final arpeggio (Measure 21) is a stroke of genius, for it wafts you and the Prelude away on a puff of golden cloud. . . . But, watch out! Don't let it bring you and the audience to earth with a dull thud!

"To the true artist music should be a necessity and not merely an occupation; he should not manufacture music, he should live in it."

—ROBERT FRANZ.

Come on YOU try it!

What? You've never played the organ? That doesn't matter . . . it's easy! Sit right down and get ready for a big surprise!

DON'T be afraid. Those unfamiliar things about an organ are really what make beautiful music easy to play. If you play the piano—even a little—you will catch on quickly. You soon will learn how the singing, flowing, sustained tones of the organ add rich beauty even to simple tunes. You learn how the contrasting, expressive voices add a new world of interest to every piece you play.

The organ tempts you on and on. You sit down for moments . . . and play for hours. It's because your music has become fascinating, more satisfying. Especially if you are an amateur will you enjoy the thrilling beauty it adds to your music.

The Hammond Organ is the marvelous electronic way of creating musical tones. Compact and charming, it is ideal for the home . . . is in use in thousands of homes and apartments. Of course, Hammond Organs aren't available now and we are busy with war work. But you can hear and try this fine instrument . . . many Hammond dealers have reserved one for this purpose.

Come on . . . won't YOU try it?

Be a Saver . . . Not a Spender

Money we spend for anything beyond what we must have is dangerous. It threatens our country with inflation. Money we save can go into War Bonds to BACK THE ATTACK!

What Is "Bel Canto," Anyhow?

(Continued from Page 207)

canto, and had the best instruction in musicianship; he was fluent in Spanish, Italian, French, and English; he had a sensitive, ever-keener ear for musical tone; he was an adept psychologist, astute in estimating the qualities of his pupils. In addition, he had what no other teacher of record had possessed, a scientific, as well as an artistic, turn of mind. Blazing a little-known trail, he sought to explain scientifically the mechanism of the human voice.

In 1841, after several years of careful research and study, he read to the *Académie des Sciences* in Paris a paper entitled *Etudes physiologiques sur la voix humaine*. This paper made a deep impression on the vocal world and is well worth reading today, though Garcia's terminology is not always that of 1944 and leaves us in doubt sometimes as to his exact meaning. He develops at length his theory of registers—still a stimulating subject for discussion among the devotees of dear old voice production. At the time of writing this paper Garcia was especially fortunate in his intimacy with a group of singers, whose names even today are famous—Malibran (his sister), Pasta, Persiani, Grisi, Rubini, Tamburini and Lablache—a galaxy of stars of the first magnitude. He knew their voices well and their way of using them.

In 1855 Garcia read before the Royal Society of London an important paper, in which he added to his utterance in Paris the results of fourteen additional years of painstaking study in matters scientific. He also gave to the world the laryngoscope, which, it was first expected by the world at large, would enable the singer—by the sight of his larynx—to beautify his voice. This may not have been Garcia's expectation, and he made little use of the new instrument in his teachings.

Reaching Fame the Hard Way

(Continued from Page 206)

into it and actually trying to live it. "The master of this deep delving into musical meanings is Toscanini. When I first heard stories of his manner of rehearsal and of his using as many as six rehearsals to perfect a number that was entirely familiar to those working under him, I wondered how that could be. But now that I have had the privilege of working under Toscanini myself, I no longer wonder! To this great master, rehearsing means more than simply making the notes come out right! It means an intensive delving into musical meanings, shadings, tonal projections, niceties of enunciation, emphasis, phrasing—all the minute details that add up to the perfection of a Toscanini performance. He prepared the 'Rigoletto Quartet' for a recent concert. I had sung the tenor part in that at least eighty times, if not more, and felt absolutely sure of it in every way. Yet I had never discovered so much in that familiar work as I did after the *Maestro* had given us six rehearsals in it!

"There is no such thing as a short cut to musical eminence. Every step of the road must be fought for! The young singer must make up his mind to win vocal battles, interpretative battles, battles with words, with phrases, with his own conscience. Only when he emerges victorious can he reckon himself a singer. That is why the hard way into a career brings distinct advantages of its own—it makes you ready and keeps you fit for the never-ending struggle of maintaining yourself in art."

Garcia and Lamperti

The laryngoscope has been of great value to the laryngologists, but cannot be said to have strengthened the art of singing. Certainly the group of singers just mentioned, all of whom made their reputations before 1855, surpassed in virtuosity any group that has flourished since that date. In this connection I quote from Lamperti, a contemporary of Garcia's, and by many thought to be his equal—even his superior—as a teacher. For fully half a century he listened to all the important singers of his time and was well qualified to recognize progress, if any, in his art. In his "Art of Singing," a valuable treatise, he moans dejectedly, "It is a sad but undeniable truth that the art of singing is in a terrible state of decadence." To the same effect had spoken Tosi in 1723 and Mancini in 1777, and so may Garcia have muttered to himself in 1806, looking proudly but sadly at his laryngoscope. According to the most competent judges, the art of dear old voice production has always been in decadence.

But, though we may not attribute great value to teaching as a result of Garcia's scientific researches and inventions, we cannot deny him a high rating, perhaps

"The ear, attuned to literary, poetic, spiritual expression, will always be distressed by that quality which is popularly called 'vibrant'."

Ffrangcon-Davies.

VOICE QUESTIONS

Answered by DR. NICHOLAS DOUTY

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Is Success Possible for a Woman of Thirty-seven With a Beautiful Voice but No Knowledge of Music?

Q. Is it possible for a young woman who has had her voice developed at the age of thirty-four, and who is now thirty-seven, to become a successful public singer? The voice is a beautiful one, a mezzo-soprano with a range from G to high C, and very rich tones.

2. How can one get started in singing before the public, and how can one find a good coach? The present singing teacher did nothing but place the voice. The training is excellent.—M. B.

A. As we have pointed out so very often in these columns, it takes more than a fine voice to make a success as a public singer. In addition to the voice, the student must have a good physique, a pleasant personality, a certain understanding of two or three foreign languages, and enough musicianship to read music fairly well, and to sing in tune, and in rhythm. Musicianship is the attribute most generally neglected or postponed until it is too late. In your own case you find yourself at thirty-seven with a beautiful, well-placed voice, with little or no knowledge of music or of repertoire. The study of these things should have gone hand in hand with the study of voice placement. At thirty-seven you should have been able to read music fluently, and you should have become familiar with a great number of songs and arias in several foreign languages. Whether or not you would be able to overcome this handicap of lost time and opportunity depends entirely upon yourself. It would take a tremendous amount of concentrated effort, the driving force of a strong character upon your part, and a magnificent coöperator upon the part of your teacher. However, if you have all these things that I have pointed out in addition to your beautiful voice, and if you can find such a gifted teacher who will give enough time and attention to your case, there may be hope for you yet.

2. New York has many excellent voice teachers of national and international reputation, capable of guiding you in every branch of the art from the rudiments up to its highest development—concert, recital, oratorio, and opera. You can readily realize that where there are so many good ones, it would be very tactless for us to suggest any individual teacher or any particular school.

The Correct Method of Breathing. What Is It?

Q. I am a tenor student of singing and have been studying with one teacher for about a year, and am also obtaining helpful hints from THE ETUDE. My teacher has been teaching me pressure breathing from the diaphragm which, according to previous articles in THE ETUDE, is quite correct. However, in the February issue in an article by Mr. Paul Althouse, he has debunked this procedure. Please advise me of the correct method of breathing.—F. R.

A. We think that you have not understood either your teacher or Mr. Paul Althouse's article. In that article Mr. Althouse has insisted that the only correct way to sing is the natural way. In other words, that the process of breathing in and out, the necessary actions of the vocal and speech muscles, and the reinforcement in the resonators occur according to natural laws. Any actions that depart from these laws are very harmful to the singer, no matter how many so-called scientific or unscientific authorities may advocate them. Mr. Althouse has not "debunked," to use your word, any natural proceeding, but only every unnatural and exaggerated one. The expression "pressure breathing," which you use in your letter, is a misleading one. It immediately suggests effort and tension in a process that should be comfortable and free. In the act of filling and emptying the lungs

during singing, not only the diaphragm but quite a number of other muscles are used. To exaggerate the action of the diaphragm or of any other one of these muscles is to court stiffness and rigidity. In a living body the breathing muscles are continually moving, even during sleep. Only in a dead body do their actions cease. Mr. Paul Althouse has said these things clearly and well. If what he writes does not coincide with your own views, we would advise you to study the phenomenon of breathing more deeply. The more you learn about it and the other processes concerned in the use of the singing voice, the more likely you will be to understand and agree with him. A good book upon the anatomy of the chest and of the lungs ought to clarify these matters for you.

Should the Tonsils Come Out?

Q. I am twenty, a soprano with a good voice and a definite talent for music, but when I sing there is a faint, gritty sound and a slight hoarseness such as might accompany slowly escaping breath. This barely is audible to me and cannot be detected by the casual ear. What is the cause?

2. My doctor says I have a throat infection caused by defective tonsils. He does not insist that I have them out, but is treating them. Shall I have them out?

3. I am planning to go to New York soon to study, but I am unfortunately troubled by lack of funds. Is there some company or something from which I can secure enough to go to New York to live and study? If not, what else can I do? You cannot realize how badly I want to study singing.—L. M.

A. 1 and 2. It seems very clear that the infection has not been confined to the tonsils but has spread into the larynx itself. Your hoarse, breathy tone suggests that the vocal cords and even the muscles that control them are also involved. It is difficult to approximate the cords, and therefore a certain amount of breath escapes through the aperture between them without being turned into tone, causing your voice to be hoarse and breathy. If your doctor can cure this condition by applications, well and good. If not, the tonsils should come out.

3. If you are an extraordinarily talented person with a rare, beautiful voice and a charming personality, perhaps you might find some "angel" in New York to help finance you until you can accomplish your ambition. Please do not forget that there are many thousands of girls all over the United States who have the same assets—good voices, good looks, and much ambition and the same liabilities of very little money and no prospect of getting any. We hope that you will be one of those fortunate enough to find financial help somewhere, so that you may obtain your heart's desire.

IMPROVE YOUR PLAYING

Pianists—Send for free booklet showing how you may greatly improve your technique, accuracy, memorizing, sight-reading and playing thru mental muscular co-ordination. Quick results. Practice effort minimized. Used by famous pianists, teachers and students. No obligation.

Broadwell Studios, Dept. 64-D Covina, California

For anyone who plays the piano —and wants to play it better

PLAYING THE PIANO FOR PLEASURE, by Charles Cooke, is a book for amateurs by an amateur. If you have ever studied or played piano, even badly, this book will provide you with a master plan for improving your playing to the point where it will become a delightful, satisfying lifelong hobby.

The author not only provides persuasive ideas for improving your technique, enlarging your repertoire, suggesting a practice routine, showing you how to memorize or sight-read better than you ever did before. His humor and infectious enthusiasm for the piano also fill you with the necessary inspiration to go with the above. The book also is full of concrete suggestions gleaned from the author's interviews with many modern masters, such as Horowitz, Schnabel, Brailowsky, Rosenthal.

James Francis Cooke, editor of *The Etude*: "A most delightful and ingenious book. Mr. Cooke displays a finer insight into the problems of piano playing than many professionals."

Deems Taylor: "The book is enormously useful—sane—persuasive—practical as the devil."

Virgil Thomson: "An utterly sensible and gay book, as far as I know, unique. Cannot fail to be of use to anyone who really likes to play the piano."

Making the Church Musical Message More Emphatic

(Continued from Page 209)

the great walls of the Cathedral of St. John the Divine, whether it is the evangelist's tent, or whether it consists of a shut-in listening to a church service through a radio receiver.

On the other hand, we musical directors should not neglect to use every legitimate psychological approach to stress the structure and purpose of the service. The parishioner should leave the service refreshed, inspired, exalted, happy, and better adjusted spiritually to meet the problems of modern life. He also should be imbued with a strong desire to go back to the Church each Sabbath as an indispensable sanctuary of the soul.

A musical service never should be a hedgepodge of this and that. Some church libraries are like Mother Hubbard's cupboard; they are bare of the right kind of material which the choir-master finds absolutely essential to conduct a worthy program. Just how church music committees expect the organist to produce results with a lot of damaged, time-worn, antiquated music is always a curious question. A hole that lets the rain through the roof of a church would be repaired at once, but a hole in the Church music library, which prevents effective service, often is forgotten for months by the Finance Committee. Church music, like the church carpet, wears out and is sometimes hopelessly out of the spirit of the day. Generous appropriations in the Church music library usually are productive. The interest of the choir, once lost by inadequate, ragged, and forlorn music, may be difficult to regain.

Uniting Pulpit and Choir Loft

What is the usual musical procedure in a vast number of nonliturgical churches in our country? Once a week there is "choir practice," a more or less nondescript party in which voices, good and bad, are heard, with a copious admixture of caustic local gossip. No one thinks of the clergyman, and certainly the clergyman rarely thinks of the choir unless he has a nightmare. On the Sabbath Day the pulpit and the choir loft come together traditionally for the weekly contest, often with disastrous results.

It is said that in a great many churches in eastern cities, evening services have been abandoned. Why? There is no united spiritual power to draw congregations to the Church. If the Church does not make people want to go to church, don't blame it upon a crumbling interest in God or religion. As a matter of fact, a large part of the public is spiritually starved and does not know it. Put the blame where it belongs—upon all those who are responsible for uninteresting, uninspired church services. Remember that in these days there are many churches from coast to coast giving two services a day and turning away crowds. The reason is obvious. Their services richly remunerate all those who attend.

I am firmly of the conviction that we are about to have a world spiritual revival. In the army camps wherever I have sung, all are astonished by the

amazingly increased interest in religion. Our boys are coming back to their homes different men from those who left. Millions, in the moment of great urgency, have felt the appeal for divine help which might never have come to them at home. Will those who assume the responsibility for the Church realize this tremendous opportunity and responsibility, and organize services in which the spiritual potentialities of the pulpit and the choir loft will be united in one mighty effort for the benefit of the human race?

Great Pipe Organs in American Mansions

(Continued from Page 197)

This, to him, was the height of musical enjoyment.

"One of Mr. Charles M. Schwab's favorites was Nevin's *The Rosary*. It was necessary for me to take such melodies as these and treat them for the organ as though I were arranging them seriously for a symphony orchestra. Mr. Carnegie, on the other hand, had few definite preferences outside of the 'auld Scotch tunes,' but he wanted volume, and plenty of it. He called for the full power of the organ and couldn't seem to get enough of it. He used to say with his pronounced Scotch burr, "Noo, Man, make the rafters ring!"

"The number of really large and fine organs in private homes in America runs into the thousands. The old Aeolian Company, which specialized in the field, installed in one year instruments to the value of over two million dollars.

"I chose this field, as my interest in the instrument is wholly musical and I tired of sharing my organ playing with church rituals and routine concert programs which inevitably become very stereotyped. I loved the organ and longed for a free field of expression among listeners who would understand my ideals. This was the best way in which I could develop my life work. The great patrons of art, from the Medici to the present, have been men and women of high position and wealth, who have presented the public with many of the finest creations in music, painting, and the other arts. I realized that the only surroundings in my native country which presented this opportunity were those of the kings of society, finance, and industry, who for their own delight would support what they helped to develop. Such possessions ultimately reach the hands of the greater public and are very precious to a democracy.

"The radio and the phonograph may be called the average man's private organ. They have made the greatest music of the world accessible to him in his home, if he wants it. Radio programs are not usually continuous programs of beautiful music, but consist of a great variety of features, from prize fights to political and economic arguments, and intermittent sprees of chaotic jazz. Nevertheless, the radio and phonograph hold first place in developing public musical taste.

"It has been my chief objective to make the selections for my programs appealing and understandable. I play continuously, going from one composition to another, improvising an *intermezzo* binding the pieces together. I dislike ap-

plause. Sometimes I am asked to repeat the interlude and, of course, it is impossible to repeat an improvisation. Many of my recitals have lasted from nine in the evening to one in the morning and even longer, without intermission.

"The general public in America knows little of how much and how sincere have been the love and devotion to the arts manifested by our famous families, although it learns of the fabulously munificent gifts of millions of dollars to art collections and foundations made by men of wealth. If it had not been for the fact that leaders of the state, business, and commerce in Italy, Spain, The Netherlands, and England had had high ideals and rich tastes, we would not now, centuries later, have in the great museums of the world, for millions to enjoy, the masterpieces of Titian, Raphael, Michelangelo, Tintoretto, Velasquez, Murillo, El Greco, Rubens, Rembrandt, Hals, Reynolds, Gainsborough, Holbein, Da Vinci, and scores of others. In fact, our museums would be quite bare if there had not been a social condition which brought these works into being.

(A second section of this unusual conference will appear in THE ETUDE next month.)

An All-Night Singing in the Mountain Backwoods

(Continued from Page 212)

1905, held in Atlanta, Mr. Showalter led a chorus of some thousands of rural singers, for which day's work he received a check for five hundred dollars, a considerable sum in 1905.

An enormous amount of planning, publishing, and propaganda are necessary to the keeping alive of the social phenomenon known locally as "Singing." Practically all rural, many small-town, and not a few suburban churches for many years have had a specific Sunday set aside for their annual Singings; and many are the preparations and great enthusiasms manifest on such occasions.

John Bunyan Atkins, columnist of *The De Kalb Times*, May 11, 1939, wrote of the all-day Singing at Chavies: "New York can have its World's Fair, San Francisco can have its Treasure Island, and both can spend millions of dollars on advertising, but people on Sand Mountain will go to Singings.

"Chavies is a name that would not be recognized in New York or San Francisco. Yet one man counted fourteen hundred cars there Sunday. If we multiply that by five persons to the car, we have seven thousand persons. But there were trucks, school buses, and dilapidated cars, piled high with people. Men, women, boys, and girls stood closely as possible on huge trucks, and pulled pieces of canvas over their heads to keep out the rain. I saw a Ford roadster, homeward bound, with ten persons in it. And scores of people walked to the Singing.

"Lovers walked to and fro across the bridge and in other directions, oblivious to the sound of horns and pushing by slowly moving cars. The pedestrian lovers had the right of way, and they knew it."

The singers are much given to delicious home-spun witticisms. One such case in point is typical. An old hillman was directing the "class" one hot day

when a lady and her daughter drove up to the building in a buggy and proceeded to tie up the mule. This mule was a born rogue, and almost before the ladies' backs were turned he had succeeded in getting loose. All this had been noted by the gentleman from his vantage-point on the director's stand. Knowing the damage that might result, our old farmer—without losing a single beat, and matching his message to the tune and rhythm of the song they happened to be singing—motioned to a friend and sang:

"Tell that woman that her mule's a-loose.
If she don't catch him now, there'll be no Jse,
Mi fa sol, sol fa mi do, re re do."

"New York's Easter Parade has nothing on the parade at Chavies. Beautiful girls—Sand Mountain has plenty of them—marched by in pancake hats and pink dresses—and shoes with holes in the toes. As I sat there and watched that parade go by I had a funny feeling. I wanted about twenty years rubbed out of my life, and to be marching in that parade with one of those girls wearing a pancake hat, a pink dress, and shoes with holes in the toes.

"It rained, and it rained hard, but the singing must go on. And the parade must go on. Using newspapers and coats for umbrellas, the girls continued their march. The boys, chivalrous they are, continued the march while the rain took the creases out of their Sunday pants, and the mud oozed through the holes in the toes of their sweetheart's shoes.

"It rained soda pop, also. Bottle after bottle of soft drinks quenched the thirst of the milling thousands. And sizzling hamburgers and hot dogs softened the pangs of hunger. There wasn't a single Ghandi at Chavies—no fasters, I mean. We haven't much money on Sand Mountain but we have a heck of a time."

Teaching Stringed Instruments

(Continued from Page 210)

not be required that such illustration be made only through application in major works.

The student would be expected to be able to show another precisely how to play a three or four-note chord, but he would not be required to do this by playing the *Fugue* from the Bach "Solo Sonata in G minor." Similarly, the student should be able to illustrate the *spiccato* bowing, but certainly not by means of a performance of the Paganini *Moto Perpetuo*; and also left-hand shifting, but not necessarily through a performance of the *arpeggios* in the Ernst "Concerto" or the Saint-Saëns "Introduction and Rondo Capriccioso." Finally, proficiency in No. 4 should be acquired through listening courses in violin, violoncello, chamber music, and symphonic literature.

When the secondary school string teacher and conductor (1) knows how, (2) knows how to tell others how, (3) knows how to show others how, and (4) does; then, and then only, will the grim shadow now cast over string efforts at all levels lift and reveal a fertile field, as yet untitled, but promising an increasingly rewarding crop.

by H. P. Hopkins

appears many times in the Century catalogue. Each time you see this name you may be sure that the piece is melodic, is well written, and puts across its pedagogic purpose in a way that children like. The list contains a few of the Hopkins pieces in Century Edition . . . like all Century pieces, they are 15c a copy.

FINGER DEVELOPER

"A New Invention for Pianists"

The use of this exerciser a few minutes daily is guaranteed to improve the touch of any pianist. It has been stated by many that it will revolutionize pianoforte technique. It develops the muscles of the fingers, hands, and arms in a new and wonderful way and so quickly that users are astonished. The appliance consists of an ingenious arrangement of rings and fine silk-covered elastic, which creates resistance on the "downward" and assistance on the "upward" movement of the fingers. The effect of this is noticed immediately, greater speed and brilliancy being attained. Our new booklet of testimonials is now ready and will be sent upon request. Order today! Supply is limited.

ORGAN AND CHOIR QUESTIONS

Answered by HENRY S. FRY, Mus. Doc.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various organs.

Q. Will you quote specifications for an organ for a church 44' wide, 50-53' long, and 23' high, seating three hundred to three hundred fifty people? Since it is a Christian Science church there will be no choir. Would your recommendation be a unified organ? The instrument is to be placed on a balcony in the rear of the church. Do you know anything about Mozart's sonatas for the organ?—J. W.

A. You do not state the size of the organ chamber, the amount you expect to spend for the organ, quality of acoustics, and so on. We, of course, prefer a "straight" organ, but have no objections to a reasonably unified instrument where funds are limited. We shall make the specification somewhat unified and, on request, will submit a new one for a "straight" organ or will examine a suggested one, provided the builder is not mentioned. If conditions are favorable we suggest the following specification:

GREAT ORGAN		
Dulciana	16'	97 Pipes
Open Diapason	8'	73 Pipes
Harmonic Flute	8'	73 Pipes
Gamba (mild)	8'	73 Pipes
Dulciana	8'	73 Notes
Flute Harmonic	4'	73 Pipes
Octave	4'	73 Pipes
Dulciana	4'	73 Notes
Dulciana Twelfth	2 2/3'	61 Notes
Dulciana Fifteenth	2'	61 Notes
Mixture	3 Ranks	183 Pipes
Trumpet	8'	73 Pipes

SWELL ORGAN		
Bourdon	16'	97 Pipes
Violin Diapason	8'	73 Pipes
Stopped Flute	8'	73 Notes
Salicional	8'	85 Pipes
Voix Celeste	8'	61 Pipes
Flute d'Amour	4'	73 Notes
Violin Diapason	4'	73 Pipes
Octave	4'	73 Pipes
Salicet	4'	73 Notes
Nazard Flute	2 2/3'	61 Notes
Flautina	2'	61 Notes
Mixture	5 Ranks	305 Pipes
Oboe	Synthetic	73 Notes
Cornopean (bright)	8'	73 Pipes
Clarion	4'	73 Pipes
Vox Humana	4'	73 Pipes

PEDAL ORGAN		
Open Diapason	16'	44 Pipes
Dulciana	16'	44 Notes
Bourdon	16'	44 Pipes
Dolce Bourdon	16'	44 Notes
Dulciana	8'	44 Notes
Octave	8'	32 Notes
Gamba	8'	32 Notes
Flute Harmonic	8'	44 Notes
Flute Harmonic	4'	32 Notes
Contra Cornopean	16'	(Swell Ext.) 12 Pipes
Cornopean	8'	(Swell) 44 Notes
Clarion	4'	(Swell) 32 Notes

Great and Swell Organs to be enclosed in individual Swell Boxes. Usual Couplers and accessories, including Great to Pedal 4' Swell to Pedal 4' and Pedal to Pedal Octaves.

We do not know of any Sonatas for organ, by Mozart.

Q. I have recently purchased an organ for my home, and would appreciate some information about it. It is a small Mason and Hamlin organ, and the number on it is 54755. Would like to know when the instrument was built. If you cannot give me this information can you tell me where I can secure it?—J. Q. R.

A. We cannot give you any information about the organ, and do not know whether you can get any from the firm who handle the piano of the same name, the organ being no longer manufactured. You might write Dr. Frank Taft, 677 Fifth Avenue, New York City, giving him description of the organ, and asking him for information.

Q. Will you send the names and addresses of the builders of the organ in the Wanamaker store, Philadelphia, and that in Convention Hall, Atlantic City. I am very much interested in construction of organs, and would like a copy of the specification of each of these fine instruments.—B. W.

A. The Wanamaker organ was originally installed at an exhibition in St. Louis. The instrument is much enlarged, and is cared for by the organ department connected with the store. The instrument is a very large one; for information about the specification, we suggest that you address the Pipe Organ Department of the Wanamaker store, Philadelphia. The Atlantic City organ is also a very large instrument, built by Midmer-Losh, and we suggest that you state your wishes to Emerson L. Richards, the Organ Architect, at Atlantic City, New Jersey.

Q. I have inherited from my parents an old fashioned reed organ—the case flat top like the spinet desk of today. The organ was manufactured by Mason and Hamlin Company, and the style is called "Metropolitan." Serial number 3794. I am interested in the age of the instrument. Thought you might be able to give me some data, or perhaps inform me where to write for it.—R. D. N.

A. We cannot give you any information about the organ, and do not know whether you can get any from the firm who handle the piano of the same name, the organ being no longer manufactured. You might write Dr. Frank Taft, 677 Fifth Avenue, New York City, giving him description of the organ, and asking him for information.

Q. I have organized a fifteen-voice girls' chorus of junior high school age, quite evenly balanced. We are planning to give an Easter cantata in the church (Presbyterian). I would like to have suggestions for a suitable Easter cantata for the choir of girls' voices—something very simple and easy with a minimum amount of solo work.—M. W.

A. We suggest that you examine for your purpose the following cantatas. (There are not many from which to make a selection.) "The Risen King," by Schaeffer; "Victory Divine," by Marks-Warhurst. There is also a Lenten cantata for girls' voices—"Penitence, Pardon and Peace," by Maunder-Warhurst. Any of the works suggested may be had from the publishers of THE ETUDE.

A Famous Radio Debut

(Continued from Page 202)

of concerts during the fall-winter season, beginning last October, but a disagreement with the Musicians' Union caused the cancellation of that series. Eugene Ormandy, regular conductor, is scheduled to lead the orchestra in the concerts of April 1, 8, and 22. Saul Caston, associate conductor of the orchestra, will be the leader in the concert of April 15. The series terminates on April 22. Harl McDonald, manager of the orchestra, is the music annotator for the programs.

Mutual's Symphonette, heard each evening, Monday through Friday from 10:30 to 11:00 P.M. EWT, is a new program of unique interest. Mishel Piatro, concertmaster of the NBC Symphony, is the conductor, and Joseph Schuster, the violoncellist, is regular soloist. The orchestra boasts an ensemble of the finest musicians now before the public. The first violin section alone has a group of men who have served as concertmasters of four of the foremost American symphony orchestras, and there are other players who are equally renowned in other fields, since there are players well known as chamber music artists, apart from the orchestra. Naturally, an orchestra of famous musicians like this cannot be assembled night after night; the majority of the men have other commitments. For this reason, the whole series of the programs have had to be transcribed. This is one of the first series of its kind to be completed since the recording ban was lifted—the result of an agreement between Mutual and the Musicians' Union. Symphonette is broadcast throughout the United States and Canada, and through the OWI is brought to our troops all over the world.

That highly interesting series of programs called Music of the New World began a new group of presentations on February 24 (NBC Network—Thursdays 11:30 to 12:00 midnight, EWT). These broadcasts, known under the subtitle of "Folkways in Music," bring us the relationship of music to ways of living among peoples of the Americas. The new series began with the romantic lands of the "Spanish Main"—Central America, Colombia, Venezuela, Louisiana, and California. The last of the March programs dealt with the wealth of folk music found in the Appalachian Highlands.

The first of the April series, April 6, deals with music "From New England." On April 13, the Canadian Broadcasting Corporation contributes a program on "Anglo-Canadian Music." "American Folk Heroes," April 20, centers on such folk figures as Davy Crockett and John Henry; and "Mexican Panorama," April 27, offers a musical tour of that varied country. "Folkways in Music" has proved to be one of the most popular programs of its kind ever devised; its interest lies not alone in the novelty of its material, but in the fact that its music derives from the peoples of the Western Hemisphere. Even though one feels there is an element of education intended in these programs, it is hard to refute the fascinating quality of the entertainment.

Gateways to Music, CBS's Tuesday American School of the Air broadcasts, offers a variety of programs for April. The title of the program of April 4 is "Tchaikovsky, People's Symphonist." April 11 deals with the music of South America; the program is aptly titled "Saludos Americanos." "From Bohemia's Fields and Meadows" is the title of the broadcast of April 18, with music of Smetana and Dvořák. April 25 is the last program for the year; it is titled "America Today." The compositions on this broadcast will be drawn from the works of some of the distinguished contemporary Americans.

VIOLIN QUESTIONS

Answered by HAROLD BERKLEY

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Teechler Violins

A. E. F., New York.—David Teechler was born in Salzburg about 1666, and died in Rome sometime after 1743. He emigrated to Italy somewhere around the beginning of the eighteenth century, and founded the Roman School of violin making. At first he copied Jacobus Stainer; later he followed the Amati outlines. All his violins, however, are more or less highly arched, and his work is always reminiscent of his Tyrolean ancestry. His workmanship varied considerably, as did the quality of the wood and the varnish he used. Consequently, the price range of his violins is rather wide. A genuine Teechler may be worth anywhere from fifteen hundred to three thousand dollars. There are, however, many imitations Teechlers on the market, instruments that have been cleverly copied as regards workmanship and label. These violins would not be worth, at the very most, more than a fifth of the value of a genuine Teechler. Whether your violin is genuine or not can only be determined by having it examined by a recognized expert. As you live so near New York City, you could easily have this done.

Mass-Production

Miss I. R. F., New York.—The firm of Wilhelm Dürschmidt is, or was until recently, located in Markneukirchen, Germany, and produces violins in a form of modified mass-production. That is to say, one man (or several) makes nothing but tops, another man or group of men does nothing but make backs, a third is responsible for scrolls, and so on. The parts are then assembled; a top made from good wood is put with a better quality back, and matching ribs are fitted to them—and a higher grade violin is the result. The Dürschmidt firm has turned out some quite good-looking copies, of which your violin appears to be one. Generally speaking they produce a fairly good grade of commercial violin ranging in value from \$50.00 to \$100.00.

Concerning Cadenzas

O. E. J., Arkansas.—Most violinists nowadays use the Kreisler, the Auer, or the Joachim cadenzas to the Beethoven "Concerto"; with the first two gaining in popularity at the expense of the third. Albert Spalding uses the Kreisler cadenzas; Heifetz uses those of Auer—with, I think, some changes of his own, and Busch always plays the cadenzas of Joachim. For the Brahms "Concerto," most violinists use the Joachim cadenza, which has yet to be improved upon; though Heifetz and, I believe, Francescatti use the Auer cadenza. Szegedi uses his own.

2. In the passage you quote from the Mazurka by Musin, the B-flats in the violin line should certainly be B-naturals. The chord is a dominant seventh in the key of C, of which B natural is the leading-tone. It is only in the piano part that the natural is omitted; in the violin part the first B has a natural in front of it, and this, of course, governs all the other B's in the measure.

Height of Violin Bridge

S. S., Washington, D. C.—It is difficult to lay down exact rules regarding the proper height of a violin bridge, for there are several factors that have to be taken into consideration. Chief among these is the height of the fingerboard. For a violin of broad, flat model, the top of the fingerboard should be twenty or twenty-one millimeters above the belly; for a more highly arched violin, the distance would be eighteen or nineteen millimeters. The bridge is then cut accordingly. But some violins have the fingerboard set a little too high or a little too low, which requires that the bridge be cut a little higher or lower than is appropriate for the instrument. Then again, some violinists like to have their strings noticeably farther from the fingerboard than other players do. All these things have to be considered when a bridge is being cut.

2. A skilled repairer can usually improve the tone of a violin if its shortcomings are caused by poor adjustment of the bridge and sound post, or if the bass bar is not of suitable size and weight. If, however, the fault lies with the quality of wood that has been used, or if the workmanship is inferior, there is not much that the cleverest repairer can do.

Slow Practice Needed

G. R. I., Oregon.—To change backwards and forwards from a three-quarter-sized violin to a full-sized instrument cannot help upsetting your left-hand technique, and I advise you to concentrate on getting accustomed to the larger instrument. Unless, of course, your hand is unusually small. If this is the case, try to get hold of a seven-eighth violin.

There is only one way to attain a correct spacing of the fingers—slow, careful practice. Practice, that is, in which your ear is aware of every note you play. Your practice should be so slow that you are able to hear, inwardly, the correct pitch of each note before you play it. The ear guides the fingers; and if your ear knows what a note ought to sound like, your finger will have a very much better chance of finding the right place. If you practice scales and arpeggios and some Kreutzer or Mazas "Studies" in this way for a few weeks, I feel sure you will regain your confidence in your left-hand technique. During this time, you should try to avoid completely any rapid playing, for one can easily lose in half an hour all that has been gained from several hours of careful practice. After you have regained control over your intonation you can play as rapidly as you like—provided always that you do some slow practicing every day!

For Scale Study

Mrs. N. P., Kansas.—1. The name "Heinrich Heberlein" on the label in your violin implies that it was made by the firm of that name in Markneukirchen, Germany. It is a commercial firm, producing violins of various grades which today are worth anywhere from seventy-five to two hundred dollars. Their better instruments are well made, and many have a very fair quality of tone. The firm was founded some thirty or forty years ago, and was making violins up to the outbreak of the present war. It may still be in existence.

2. There are many scale books on the market, but I think that you should get either Schradieck or Hrmaly. Either would suit your needs perfectly. As regards books of studies, the best for you at present would be the first and second books of the Kayser "Studies, Op. 20," and the "Selected Studies in the Second and Third Positions" by Levenson. 3. Before you study any concerti in the first three positions, I would suggest that you learn the "Second Concerto" by Seitz. True, it is all in the first position, but it requires considerable facility of technic. The "Third" and "Fourth" Concerti by Seitz; the "Concertino, Op. 6," by Huber; and the "Concertino, Op. 21," by Rieding, are all in the first three positions, but they are more advanced technically than the studies on which you are working.

4. The only book I can think of about violinists—a book, that is, of the type you want—is "Violinists of Today and Yesterday," by Lahee; but if you write to the publishers of THE ETUDE, I am glad that you are studying again, after so long a time away from your violin, for I know quite well what it must mean to you.

PIANO TEACHERS!

SPEED DRILLS (FLASH CARDS)

for Teaching Beginners
Sight Reading

Complete Set of 32 Cards, Keyboard Finder and Book of Instructions—Only 50¢

SIGHT-PLAYING easily and quickly learned by tiny tots, or beginners of any age, with these Speed Drill Cards. Makes teaching easier and quicker for class or individual instruction.

EASY TO USE—Speed Drills consist of 32 cards with complete and easy-to-follow instructions for their use. On each card is a picture of the note on the staff which corresponds with the key on the piano keyboard. Thus, the student learns through his eyes, rather than the written or spoken word, the location and position of each note.

AN ADVANCED STEP—Speed Drills are an advanced step in aiding the student to quickly identify the note on the staff with the key on the piano. These handy cards stress visual accuracy, recognition of the keyboard positions, producing rapid visual, mental and muscular coordination.

THE LARGE NOTES make vivid mental pictures. This feature is important, but best of all... children like Speed Drills. They should be used at the first lesson, and the pupil should have a set for daily home practice.

SIGHT-PLAYING is becoming more and more of a requirement of pianists, and students at the very start, should be trained to attain it. Speed Drills will lay the foundation for proficient sight playing.

GET YOURS TODAY—Speed Drills may be obtained from your local music dealer, or send direct to us, the publishers. Complete set of 32 cards with instructions, only 50¢.

JENKINS MUSIC COMPANY, Kansas City 6, Mo.

PREPARE NOW FOR TOMORROW!

Attend
a Music Conservatory
in Your Own Home

Uncle Sam makes it possible for you to take practical music lessons by correspondence, even though you are thousands of miles away from your teacher.

Definite, concise, comprehensive lessons (prepared by able, recognized teachers) illustrated and clearly explained—always before you to study and refer to over and over again.

Nothing is left to guess work.

An examination paper accompanies every lesson. If there is anything you don't understand it is explained to you in detail by our experienced teachers.

PADEREWSKI said of our Piano course—

"It is one of the most important additions to the pedagogical literature on pianoforte playing published for years. As an excellent guide for students and solid and reliable advice for teachers, it is bound to become very popular, and the more so as it bears the stamp of a real pianist, accomplished musician and experienced pedagogue."

DEGREE OF BACHELOR OF MUSIC

You are awarded a diploma when you have completed a course to the satisfaction of the Instruction Department and the Board of Directors. We are also authorized to issue the Degree of Bachelor of Music upon those who comply with our requirements. These are Harmony, History of Music, Advanced Composition and an advanced practice course. The latter may be voice or instrumental. Each subject carries 30 semester hours.

Remember there are splendid opportunities in the music field to make a very comfortable income. Let us show you how. Mail the coupon today.

Building Musicianship

(Continued from Page 201)

Sunday evenings he would call my sister and me—we were the little ones—into his study and hear us play. Now my brother Walter, eight years my senior, was always a tremendous tease. It was his delight to hide behind the door and make faces at us while we played, trying to upset us. Of course, we made mistakes and shouted with laughter, and my father couldn't understand what had come over us. But once he glanced up at the door—and there was Walter, peering over the transom and making his usual grimaces.

Penance and Bach

"Aha!" observed my father, "Now we have the cause of the confusion. Come in here, Walter! You have disrupted a performance—now we shall see if you can give a better one. Come and do your penance!"

"The 'penance' he gave Walter was to transpose, at sight, a Bach *Fugue*. Walter went to the piano and accomplished it perfectly! My father was so pleased with him that all scoldings were stopped. Oh, yes, the grimaces continued!"

"But Walter's pranks weren't always disturbing. When I was six, we had as friends two charming young French girls, Louise and Jeanne Douste, who played the piano beautifully and gave public performances. The younger one was my age, and I saw no peace until I was allowed to play one of her 'concert pieces.' My teacher chose a Bach *Gavotte* for me to learn as a Christmas surprise for my father. I managed it—at the time, I believed I managed it exceedingly well!—all but an insistent trill in the left hand. That was beyond me and I was heartbroken. But Walter came to my rescue. He arranged to sit beside me when the great day came, ostensibly to turn pages, but really to execute that trill for me. The effect was electrifying. First there sounded forth my childish efforts—and then, suddenly, in came the trill with professional forcefulness. My father laughed till the tears came to his eyes—but I couldn't see what was so funny.

"My brother Frank's musical life was characterized by the same selfless generosity that was the outstanding trait of his personal life. He was the eldest of us and, at twenty, he decided to make his own way and set out for Denver. That was so like him! With everything he loved at home, he braved hardships in strange surroundings to gain independence. After doing all kinds of work, he found a post in the local music shop, founded a chorus, played the organ, and came to be recognized as the foremost musician in Denver. He was made head of music in the public schools, and found himself launched on an independent and most promising career. Then my father died. His duties at the opera were assigned to Walter, then in his early twenties, and the poor boy was nearly overwhelmed by his tremendous responsibilities. He wrote to Frank for advice, and Frank replied by coming home to assist him. Without thought of himself, he left all he had won in the West and began again at the foot of the ladder.

The Magic of Music

"Music was only partly the source of my meeting with my husband. After an

incredibly hard childhood, David, from the age of thirteen, played in theater orchestras and for dances. And all the while, he longed for proper instruction and worthy music. At last he was promised the leadership of a theater orchestra, but lost it to someone with 'influence.' To make things up to the disappointed young man, the management let him play a solo between the acts of the play. Then, one night my brother Walter went to see that play. He was at once impressed by the young violinist, sent for him to come to him, and became the means of launching David Mannes into worthier musical channels.

"But I had not yet entered the story! That came later. I sang alto in the Oratorio Society—not because I was a singer but because the Oratorio was a home tradition and I loved it—and Mr. Mannes, in the cooperating orchestra, saw me, thought he liked the looks of me, and asked the concertmaster who the girl was. The concertmaster smiled, 'Who she is? Don't you know? She's Walter Damosch's sister!' Under those circumstances, Mr. Mannes thought it would be embarrassing to press for an introduction, and there the matter stood. But not for long. My sister and I were always fond of painting and sketching, and had formed an intimate little Art Club for like-minded friends. After assiduous inquiry, Mr. Mannes found that he knew one of the members, and so a proper presentation was finally made.

"That was more than forty-five years ago—years spent in working together, making music together, teaching together, and proving, together, that the best approach to music is to live it. Fortunately, our tradition does not stop with us. Our son, Leopold Damosch Mannes (of whom I must speak with modesty lest I call down his wrath upon me!) is worthy of the name and the mantle of my father. Others besides his parents consider him a composer of merit—his works have been performed by pianists and ensemble groups of high standing—and only his interest in the Kodachrome color-photography (which, with young Leopold Godowsky, he invented and developed) interrupts his devotion to music. I repeat, I have always been singularly fortunate in my environment!"

Music Should Be Fun for Children

(Continued from Page 215)

lessons are something he must have, and that it is up to him to do his best—not simply because the lessons are costing you money, but because they will be the means of bringing pleasure some day into his own life, and perhaps into the lives of others. Every child will not become an accomplished musician, but any child can learn to play some instrument sufficiently well to amuse himself and others whose expectations are not too high.

The more good music he hears the easier it will be to convince him that he can do as well as others of his own age, if he tries. Let him learn about musicians and composers and their early struggles. Let him read and absorb musical literature. Urge him to play in the school band or orchestra. Encourage him when his progress seems slow, and praise

HISTORICAL AND PRACTICAL

Presents a collection of rare compositions from many countries and many eras. . . . Complete with authoritative explanatory notes and illustrations.

The music in this album is written in the style of generations past, but in a spirit that has not changed and will never change . . . a spirit of solid workmanship, pep and genius.

On Sale at All Music Stores or Direct From

him when he has learned to play a piece well. Have occasional amateur musicales at home where he can play before a group of people when he has learned to play well enough.

Sometimes if a youngster is not making progress, the instrument is the wrong one for that particular child. A youngster whose mouth is not suited to the trumpet might do better with a violoncello. A child whose musical ear is not too keen should never take up the study of the violin, but might do well on the piano. Study your child if he is not responding to your choice of instrument, but do not let him jump from one instrument to the other. Some youngsters tire easily of anything, and should learn to stick to some one thing. If he is this type, encourage him to stick to the instrument he has. Give him so many points for practicing, so many points for good lessons, and a special treat for a certain number of points. Play the game with him until he becomes so interested that he will want to play it to the finish.

I can sympathize with children who do not like to practice, for as a child I sometimes cried because I had to, and I blush to remember it now. There were a great many things that seemed more interesting to me than scales and finger exercises, and often I had to be practically pushed onto the piano bench with stern admonitions to stay there until the hour was over. I would have welcomed with delight the verdict of no more lessons, but I have been grateful many times to my mother for her insistence that I stick, for had she removed this opportunity from me, I would have lost a great deal of pleasant and profitable enjoyment.

Music should be fun. America, composed as it is of all kinds of peoples, is a music-loving nation, and every child who has the smallest spark of musical genius within him should have a chance to learn to play so that he can partake of and contribute to—and perhaps even create—the music of a free people. For the joy of self-expression which can best be developed through music and rhythm is everybody's birthright.

"De Gustibus non est Disputandum"

(Continued from Page 195)

John Philip Sousa, whose greatness as a man and a musician is enhanced with each passing year. (Hail to the day when our troops march down *Unter den Linden* playing *The Stars and Stripes Forever*!) The other was Anton Seidl (1850-1898), conductor of the Metropolitan Opera House and the successor to Theodore Thomas as conductor of the New York Philharmonic Orchestra. He was a profound man, and at the same time very practical.

Seidl was a Wagnerian of the Wagnerians. He had assisted the Master of Bayreuth in the preparation of the score of the Nibelungen Trilogy. Seidl and Sousa conducted concerts each summer at the better Coney Island beaches. The Sousa Band was at Manhattan Beach, and Seidl was at Brighton Beach with the Metropolitan Opera. The large hotels were the only attraction at those beaches in those days. There were no carnival features, as at the west extremity of the Island. West Brighton was the mecca for cold beer, hot dogs, hot spots, and "rag-time," the lusty scion of Tin Pan Alley. Brighton and Manhattan turned to the masters.

Seidl realized the value of melody and said, "It is like honey; the bees flock to it, but melody without a rich, harmonic background is empty—hollow. This is why I put so many Strauss Waltzes on my programs. They appear to the public merely as melody, but the musician knows that behind them is an inspired and apparently insouciant artlessness which is, after all, the height of art."

Seidl died at forty-eight, from ptomaine poisoning. Had he lived to this day to hear the very unusual and delightful modern melodies in arrangements by such masters as Black, Bennett, Grofé,

and Gould, his joy would have been great. How he would have rejoiced in Ravel's *poème chorégraphique*, *La Valse*; Milhaud's ingenious two-piano work, *Scaramouche*; or Weingartner's tuneful Polka from "Schwanda, the Bagpiper!"

Seidl was born in Hungary but he was brought up in the Wagner tradition and was best known as a Wagner conductor. Yet his views were broad and catholic in their scope, and he revered Bach, Beethoven, Schumann, Liszt, and Brahms. He also had a deep regard for the polyphonic predecessors of Bach.

There is a definite and continuous need for contemporary music for the piano that will represent finished musical workmanship, keen artistry, real melodic inspiration that places it in a class by itself—apart from musical commercial contraptions. The roots of such music are in Chopin, Schumann, and Brahms, although it must have the wider appeal that marks the music of such composers as Nevin, Sinding, Poldini, Chaminade, and Schütt at their best. It must be music that suits the hand to the keyboard; it must sound effective when heard; and it must stand the test of good musicianship and must arouse the interest of players of today who are the normal descendants of that group which found joy in the well-made, but not necessarily profound, salon music of yesteryear.

So You're Going to Play a Concerto!

(Continued from Page 216)

their hands. However, these men are exceptions and even they, once convinced the soloist is a serious artist who has prepared his part in the collaboration carefully, will prove helpful more often than not and strive earnestly to achieve an effective ensemble.

"As for myself, I never conduct for a young artist that I don't sympathize with him and put myself in his position. I am carried back to my first appearance with the London Symphony Orchestra when I played the Rachmaninoff 'Second Concerto.' No one could have been more helpful or encouraging than W. H. Reed, who conducted the London Symphony on that occasion, and I always vowed to return his kindness to others as the situation was reversed during the years that stretched ahead.

"Playing a concerto can be fun if"—and here he held up a long and admonishing finger—"the pianist is thoroughly prepared. If the groundwork is well laid and the soloist keeps his nerves under careful control, the actual performance presents no problems.

"There is nothing more thrilling than feeling yourself supported by the rich orchestral tone of a fine symphony orchestra, its instrumental coloring suffusing your piano passages and giving them added warmth. It is fun!"

the sound-reproducing machine. When Jenny Lind stopped singing and her career ended, her voice became instantly extinct—a serious artistic calamity.

"Consider the case of the great Gallucci who, because of a throat affliction, has not been heard in recent years, but whose records preserve for all time her gorgeously beautiful tone and art with the same beauty as the day she made them. They are invaluable for vocal students.

Priceless Recordings

"The wise vocal student will listen to many concerts, radio broadcasts, and fine records with great intensity. He will study carefully the nasal timbre and inflection with the most exacting aural observation and interested delight. Just as a painter must have a model from which to work, so the vocal student must create in his imagination tonal models, interpretative models, models of human appeal, so that he may form his judgment and select what he requires. Then with this accumulated knowledge, plus his regular vocal study with his teachers, he must incessantly strive to make model tones. It is an endless quest, and never once must he lose faith or his ambition to improve each day. Time and again it has been my faith which has carried me over obstacles—my faith in others, my faith in myself, and my faith in my God.

"If anyone wishes happy popularity, professional recognition, widespread friendships, and, of course, financial abundance, he must learn to propel himself through hard work by the God-given power within him.

"Singers are often accused of a lack of musicianship, and in some instances this charge is deserved. There are, however outstanding instances of singers who have had very broad musicianship. When one learns to play the piano, the organ, the violin, or any other instrument, his standing, entirely apart from his natural gifts, is based upon how thoroughly he studies his art. The vocalist should continually have before him high ideals of thoroughness and a broad grasp of the art and its technique.

Rolling Her Way to Triumph

(Continued from Page 205)

disciplinarian. It admits no compromises. If the vocal student wants to succeed he must be at his level best, teeming with resolution and enthusiasm, every moment of the day. It's what he is that counts. Nothing less than his best, day after day, can ever be accepted if he wants to ascend to the vocal heights.

"It has been my privilege to know many distinguished singers and instrumentalists and I have found that their kindly interest in others, their innate charm and gaiety which 'keeps them up,' enables them to 'carry on' and accomplish things which to others seem impossibilities. This attitude of mind is of paramount importance to the singer. Gyration of the tongue, the larynx, and the diaphragm, and miles of exercises or vocalises are of secondary significance to the right aesthetic mental concept.

"A good singer, therefore, must be a good tone analyst. In general, we note that there are at this time far more beautiful voices in the world than there were, let us say, fifty years ago. Voice teachers take great credit for this and point to their superior methods, which reach out more directly for results. They deserve much credit. But, we must remember, far more beautiful music, more beautiful tone, is heard now than then. This is due, first of all, to the radio and

The Value of Standards

"Standards are always vital in all callings. The 'Sterling' mark on silver; the mark of Montagnac, the great cloth manufacturer of Sedan, France; the mark of the American jeweler, Tiffany, and the French jeweler, Cartier; the mark of Hamilton upon a watch; the invisible mark of Stradivarius upon a violin; all are standards so priceless that they cannot be measured in coin. The singer's ambition in these days of keen competition should be to seek a standard of able musicianship as high as that of a musician devoted to any other instrument. Whether he gets this from a private master, from an institution, or through his own indefatigable labors, matters not. He should learn as much as he can, not with a view of becoming a 'dry as dust' musicologist, but with a view to refining, enriching, and making more dependable his own God-given talents.

"I was born in the small town of Monticello, Minnesota. My mother was a practical nurse. In the morning she gave me her best attention. She would place whatever I needed within my reach, then would go out to nursing engagements, which were our means of support. It meant that I was chained to solitude and apparent helplessness for years. But I

made a happy game of it. Former classmates brought me my lesson assignments from school. In the evening Mother helped me with my studies. It wasn't easy, but in this way I completed the grades and went all through high school. Finally my work was passed by the school authorities and I was graduated with honors, although all of it had been done under my own roof with my loving mother, who at the end of a hard day's labor got her 'second wind' and worked far into the night with me. "Still, I was a shut-in.

"Above all things, I longed to be a singer and to be able to get out of the house. If I had a wheel chair I could get around. I knew that there must be some way to get one. Oh, how I wanted that chair! It was beyond our means, and yet Mother and I knew there must be some way by which to get it.

"I have always found great truth in Coleridge's lines:

*'God moves in a mysterious way
His wonders to perform,'*

especially when one leaves nothing undone to cooperate through hard and earnest work. Mother always told me, 'The Lord helps those who help themselves.'

"The only thing I could do was fancy-work. I knitted, crocheted, and embroidered and had a private sale in my home. What was my delight when the local banker bought five dollars' worth of things that I had made! I could see the door of Opportunity beginning to open. With the proceeds of my sale I bought a wheel chair and I am sure that no five-thousand-dollar, shiny, new automobile ever gave its owner half the thrill that that wheel chair gave to me. Steps up stairs were now my only obstacle.

"Then I decided to go to Minneapolis and take a secretarial course and thus earn my own living and secure my education in music. Mother borrowed money for my tuition, and my chair was lifted into a railway car. I made the trip. The leading business school of the city had informed me by mail that they could not take my money because it would be impossible for me to secure a position. I went ahead, nevertheless, and when I wheeled up to the door of the business college they seemed so aghast at my audacity that they admitted me. In seven months I had completed my course.

"My first job was at the Information

desk of a small music school. The work paid practically nothing. Now and then I managed somehow to get money enough to pay for a voice lesson. Later the school was merged with a much larger institution and I became secretary to the president, and then student representative. As my income rose I took continuous and systematic voice training. Then I won a Columbia Broadcasting System singing contest and this entitled me to a ten-day trip to New York, where I had a thrilling reception. New York so fascinated me that it opened new vistas. Returning to Minneapolis I had regular radio work and many other well-paid engagements in addition to my work and studies in the

Junior Etude

Edited by

ELIZABETH A. GEST

Junior Club Outline, No. 32

Rubinstein and Great Pianists

- In the November Junior Club Outline Liszt was studied. Another great pianist, who developed piano technic, was Anton Rubinstein. When and in what country was he born?
- He founded a famous conservatory of music. In what city was it?
- Did he ever give concerts in America?
- There are many brilliant pianists concertizing at the present time whose technic, memory, and mu-

sicianship are phenomenal. Name at least six well-known concert pianists of the present day.

Keyboard Harmony

- Augmented triads are formed by raising the fifth of the major triads by one half-step. For example: C-E-G is a major triad; raise the fifth one half-step and it becomes an augmented triad; C-E-G-sharp. Listen to the sound of this augmented triad and compare it with both major and minor triads, until you are sure in your ear of its characteristic quality.
- Form augmented triads on each of the twelve chromatic tones in the octave.

How Many Music Masters?

by Alfred I. Tooke

How many names of famous music

1	2	3	4	5	6

composers can you find in the above, starting at any letter and moving one letter at a time in any direction, but not using the same one twice in any one name? When you have spelled out one name you may start again anywhere you like.

Red Cross Afghans

Many thanks for the large number of squares, both knitted and woolen-goods, recently received from the following, some of whom sent large packages of squares:

Elaine W. Schmidt; Mrs. Walter D. White; Carol Hartman; Ruth Massey; Ella Barns; Girl Scout Troop No. 1.

Rain Scales

by Martha V. Binde

I like to watch the rain come down,
And hit the window panes;
It seems to me it's playing scales
Along the dusty lanes!

At first it plays them carefully,
Each slow, big drop, just so!
As if it weren't so very sure
Just how the scales should go.

Then, after this slow practicing,
The rain scales speed along;
And gradually the shower plays
A faster, sprinkling song!

Quartet Questions

by Leonora Sill Ashton

IT WAS Lettie's asking, "What is a quartet?" that gave Meg the idea for the next club meeting, and Miss Brown told everyone to bring a question, or an interesting fact about quartets for the next meeting of the group.

Tom opened the session with the statement that "a string quartet consists of first violin, second violin, viola and 'cello." Lettie added, "The instruments in a piano quartet are violin, viola, 'cello and piano." "You are both correct," said Miss Brown, "but remember the word 'cello is merely an abbreviation for violoncello."

Dot's hand went up next, as she remarked that quartets could be formed also with voices as well as instruments. "The most usual vocal quartet," she told them, "consists of a soprano, an alto, a tenor and a bass." "That is correct, too," said Miss Brown; "in fact, any group of four performers is called a quartet." "The greatest of all quartet music has been written for the string quartet," said Harry, who played the violin rather well for his age.

The question about the composers of this type of music was a little more difficult, but they all knew the main facts: that the string quartet was developed by Haydn, who wrote seventy-seven of them; that Mozart and Beethoven and Schubert contributed great works in this form; and that Mozart dedicated six of his quartets to Haydn.

Tom had an interesting story, that

when a group of players were performing for Mozart's father, they played Mozart's "Quartet in C major" with Haydn himself playing the first violin part. "Wouldn't it have been wonderful to be listening behind the door," said Meg, as everyone smilingly agreed.

Ned told of how Beethoven wrote such fine music for string quartet that someone suggested those works be called "Quartet Symphonies."

Jean told the story of how the Russian Ambassador to Austria commissioned Beethoven to write three string quartets for him. This Beethoven did; and later the Ambassador, who was a count, formed an excellent quartet in which he himself played the second violin.

"Beethoven wrote sixteen quartets," announced Ned, "and that is the last interesting thing I could find to tell," he added.

"Very interesting facts," declared Miss Brown. "Now, what about the music in the quartets?" she questioned.

"I have an idea," said Meg, raising her hand. "Why don't we borrow some string quartet scores from the library and then get a recording of it, too? Then we can listen to the recording and keep our eyes on the notes at the same time."

Everyone thought this a splendid idea and gave Meg some applause. So a committee was appointed to go to the library and select a score, and Ned volunteered to borrow a record-

(Continued on next page)

Mozart composing; and the theme of one of his string quartettes

Quartet Questions

(Continued)

ing from his uncle, who had lots of chamber music recordings in his collection.

The next meeting was most interesting, listening to and watching the notes of a Haydn quartet; later a Mozart and then a Beethoven were studied in the same way; and more and more interesting facts about quartets and their composers were presented at the meetings. Meg had no idea what she was starting when she asked that first question, "What is a quartet?"

Junior Rhythm Band
Lewiston, Maine

Great Composers

(Prize Winner in Class A)

We have had a large number of great composers up to the present time and it is sad to note that many of them were unfortunate in some way, but probably this helped them to do better work. Surely their composition had greater emotional value. If one wishes to play a composer's work he should study the composer's life and the sentiments involved in writing the music. He should know what ideas are to be expressed in every passage. An interesting way to learn about the composer's life is to pretend, while reading, that he is taking the composer's place in life. I know there will be more great composers' works to study about and play as time goes on.

Lillian Troutman (Age 15),
Pennsylvania

Honorable Mention for January Essays:

Rosalie M. Bovey; Ruby Earle Graham; Mary Virginia White; Marilyn Yanick; Eleanor Slade; Jimmy Costby; Betty Maier; Patricia Sullivan; Diana Aiken; Nancy Lee Bopp; Betty Sims; Mary Lou Snyder; Margaret Goodman; Marilyn Munn; Martha May Stuck; Marilyn Hillman; Donna Lou Younger; Mary Helen Tate; Barbara McNutt; Virginia Swenson; Ronald Zwiegbaum; Mary Ellen West; Cecelia Burngasser; Edna Lea Dulin.

The Birds' Songs

by Alan Schwartz (Age 11)

I heard a birdie say to me
"There's music in the air."
I looked and saw a humming-bird,
A-fitting everywhere.
I looked again and saw near me
Two love-birds singing in a tree.

Letter Box

(Send answers to letters care of Junior Etude)

DEAR JUNIOR ETUDE:

I love music very very much. Although I have not had a chance to learn much I make believe I play by running my fingers over the keyboard. It makes my heart ache to hear the beautiful music of the great composers, but I am an optimist and some day I expect to be able to play the music I listen to now. To me there is nothing so inspiring and can lift up your soul as beautiful music played beautifully.

From your friend,
ADELLE McDANIEL (Age 13),
New Mexico

DEAR JUNIOR ETUDE:

Our music club has become very much interested in The Etude and our teacher lets us use her copy. Some of us hope to have our own copies some day. We organized our club several months ago and through a contest named it the Merry Melody Club. We hold our regular business and social meetings every two weeks. We are devoting much of our time now to making scrapbooks, descriptive musical drawings, and to broadcasts. The forty-three members of the club sponsor all the musical activities in the school. We hope to send you pictures of our club and our officers soon.

From your friend,
JOAN BOURGEOIS, Scribe,
Ohio

Great Composers

Prize Winner in Class C:

Ann McKenzie (Age 11), District of Columbia.

Great Composers

(Prize Winner in Class B)

Great composers, such as Bach, Haydn, Beethoven and many others have given the world immortal melodies, which, no matter how often they are played are always fresh and appealing. A glimpse into the lives of these men will convince us that they, while possessing genius, were also subject to the same discouragements and misfortunes as more ordinary individuals. Mozart, Schubert, Mendelssohn and Chopin were all short lived, and many composers were plagued by such afflictions as poor health, deafness, poverty, and other tribulations. Their accomplishments in the face of adversity, as well as their music itself should prove inspirational to us, for in spite of these handicaps, or perhaps because of them, these composers achieved the musical grandeur which in these turbulent days affords us comfort and the hope of happier years ahead.

Elizabeth Waddell (Age 13),
Oregon

Junior Etude Contest

THE JUNIOR ETUDE will award three attractive prizes each month for the neatest and best stories or essays and for answers to puzzles. Contest is open to all boys and girls under eighteen years of age.

Class A, fifteen to eighteen years of age; Class B, twelve to fifteen; Class C, under twelve years.

Names of prize winners will appear on this page in a future issue of THE ETUDE. The thirty next best contributors will receive honorable mention.

Put your name, age and class in which

you enter on upper left corner of your paper, and put your address on upper right corner of your paper.

Write on one side of paper only. Do not use typewriters and do not have anyone copy your work for you.

Essay must contain not over one hundred and fifty words and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia (1), Pa., by the 22nd of April. Results of contest will appear in July. Subject for this month's essay, "The Importance of expression in piano playing."

Twenty Piano Duet Transcriptions of Favorite Hymns.....	Kohlmann .60

THE COVER FOR THIS MONTH—The photograph used as the basis for the cover of this issue of *THE ETUDE* is a charming one that would be acceptable at any season of the year, but it appealed to us as particularly suited to the April issue this year because of its reminder of the triumphant anthems that will arise in churches everywhere in our land on Easter Sunday.

The picture shows but a few of the seventy members of the choir of Western College, Oxford, Ohio. This choir is conducted by Dr. Everett B. Helm. (See Page 196 of this issue for further details on this choir.)

PLANNING COMMENCEMENT EXERCISES

—It would take many pages to list all of the many different choruses, solo numbers, band pieces, orchestra selections, cantatas, operettas, etc. utilized in commencement exercises conducted in schools and colleges throughout America, but any of them can be obtained of the THEODORE PRESSER Co., Phila. 1, Pa.

The well-organized mail order service of the THEODORE PRESSER Co. is a great convenience each pre-commencement season to those responsible for planning the musical portions of commencement programs. This mail order service includes the privilege of obtaining single copies of music selections for examination. You may name numbers you would like to have "On Approval" or you may simply describe the type of cantata, choruses, instrumental numbers, or whatever other classification of musical selections you may want to examine to work out your definite program. A good choice of representative numbers in each classification then would be sent forward to you charged "On Approval," and any or all numbers sent "On Approval" may be returned for full credit provided they have not been used in any way. Of course, it is understood that any numbers decided upon from such selections will be ordered of the PRESSER Co.

Our unequalled stocks of music of all publishers and our experienced clerks are at your service to help you find just the right material for this very important representation of music in the commencement exercises.

With help shortages requiring more time in mail deliveries, filling of orders, and transportation services on packages, it is a wise procedure in these days to act as early as possible since delaying until the last minute may mean embarrassing disappointments.

It is also important in ordering or describing music wanted "On Approval" to overlook no detail, such as for what voices and how many parts (i.e. treble voices two-part; treble voices three-part; treble voices four-part; men's voices; mixed voices four-part (S.A.T.B.); mixed voices three-part (S.A.B.); etc.) cantatas or choruses are desired or for what voices or instruments solo selections are requested.

THE RECITAL SEASON—In the beautiful months ahead, May and June, schools and teachers will be presenting pupils in recitals and concerts that exhibit the progress made during the year to the parents, relatives and friends who attend. These recitals have proved of much value, especially to piano teachers, voice teachers, and those who teach the various solo instruments.

This season the Publishers have had many calls for suitable material for Spring Concerts and because of the unusually large classes most teachers are having, the demand for piano ensemble music has been especially noted. Fortunately many fine compositions and arrangements for two pianos, and for one piano—four hands, have been issued in recent years.

But, after all, the real thrill for the pupil in these recitals is the individual personal appearance in a solo number before the public. Careful selection by the teacher of appropriate music is, therefore, most essential. Presser's "On Sale Plan" affords every teacher a most practical means of making such selections. Single copies of any piece catalogued in the "largest stock of music in the world" may be had for 30 days' examination upon request. Or, you may ask Presser's staff of experienced clerks to make the selection for you.

Whichever method is chosen, just write THEODORE PRESSER Co., 1712 Chestnut St., Philadelphia (1), Pa., giving details as to the type of music needed, the number of pupils scheduled to participate, the grades of music they can perform, etc. and ask that a selection be sent, or that the pieces you have selected be forwarded for examination. Piano, violin, and vocal music may be had, and if special recitals are planned a matchless stock of choruses, baccalaureate anthems, cantatas, operettas and piano recital playlets also is available. Catalogs and descriptive literature may be obtained free of charge.

NUTCRACKER SUITE by P. I. Tschalkowsky, arranged for Piano Duet by William M. Felton—THE NUTCRACKER SUITE is probably the most universally loved of all the compositions of Tschalkowsky. Mr. Felton, whose great skill as an arranger is well known, has succeeded beautifully in preserving the colorful characteristics of this engaging score with its fascinating rhythmic charm.

This new piano duet arrangement of the NUTCRACKER SUITE is for students between grades four and six. The entire Suite is given complete, including the *Overture*; *March*; *Dance of the Candy Fairy*; *Russian Dance*; *Arabian Dance*; *Chinese Dance*; *Dance of the Reed Pipes*; and *Waltz of the Flowers*.

You can be sure of receiving one of the first copies upon publication by ordering now at the special cash price of \$1.00, postpaid.

OUR LATIN-AMERICAN NEIGHBORS—For Piano, Compiled and Arranged by Ada Richter—Here is another delightful little book from Mrs. Richter's "workshop," in which her skill and discernment again are most evident. For the present collection this gifted and ever alert lady resorted to the musical lore of our neighbors to the south, where she found a treasury of engaging folk material. Hence, the contents will present a number of the lovely, rhythmic airs to which these music-loving and romantic people dance, play, and give voice in song.

The material chosen for OUR LATIN-AMERICAN NEIGHBORS reflects Mrs. Richter's excellent judgment in matters of adaptation to teaching purposes. The arrangements will be about grade two in difficulty, and words for the songs will be printed between the staves. The book will be attractively illustrated, and among the contents will be: *La Golondrina*; *La Paloma*; *Tu Tu Maramba*; *Carmela*; *Cielito Lindo*; and *El Choclo*.

Prior to publication, an order for a single copy of this engaging book may be placed at the Advance of Publication cash price of 40 cents, postpaid.

REVERENTIAL ANTHEMS, by William Baines—Well known for his ability as a composer, the works of William Baines are always awaited with eager interest and REVERENTIAL ANTHEMS is no exception. Included are numbers written especially for this collection, in addition to well established numbers, which are also available separately.

Scriptural texts are used as a general rule and special numbers for Christmas, Easter, and the Lenten Season round out the contents of this collection of dignified and melodious anthems written especially for use by the average volunteer choir. To be certain of obtaining a copy for your reference library send 25 cents in cash today to cover the cost of a single copy at the special Advance of Publication price. Delivery will be made as soon as copies are released from the press.

READ THIS AND SING!—For Voice Students, Chorus and Choir Singers, by Clyde R. Dengler—Within the covers of this compact little volume is material for thirty-six weeks of vocal study, designed especially for Junior and Senior High School age levels and adaptable for grade school use. It is the result of the author's vast experience as a trainer of young voices, and conductor of high school choruses and church choirs. It presents almost every conceivable vocal action—staccato and legato, the vowel mould, scooping and drooping, note values and beating, humming, consonants, breathing, time and tone intervals, and sustained tone. Reviews and test questions appear at proper intervals, together with a composite examination at the end of the book. The material is highly objective and may be used for periodic examinations of general choral classes.

Accompanying this student's book, and of special interest to the instructor, is the TEACHER'S MANUAL, which correlates and expands the material in READ THIS AND SING!, the student's book, lesson by lesson. By itself, the TEACHER'S MANUAL constitutes one of the most remarkable essays upon the art of singing that has been published in many years. It is a mine of valuable information, presenting clearly and carefully all the attributes of the art, with accepted authorities quoted in substantiation of the author's conclusions. The TEACHER'S MANUAL is a "must" for every progressive vocal teacher, choral leader, or choirmaster.

In advance of publication, both books are offered at prices far below the retail list price, with postage prepaid. A single copy of READ THIS AND SING! may be ordered now at 25 cents; the TEACHER'S MANUAL at \$1.00.

THEMES FROM THE GREAT OPERAS—For Piano Solo, Compiled by Henry Levine—The success Mr. Levine has won through his practical transcriptions for piano signifies not only his special talents in that direction, but also the general need for the kind of arrangement in which he excels. The enthusiastic acceptance and wide usage of his popular collections, THEMES FROM THE GREAT PIANO CONCERTOS, and THEMES FROM THE GREAT SYMPHONIES, has established this fact.

This third compilation by Mr. Levine, now in preparation, bids fair also to make a place all its own, if we are to judge by the interest centered in its publication. This, however, does not surprise us for, like its predecessors, it will reflect the compiler's careful judgment as to content and rare discernment regarding practicability and usefulness. In difficulty the book will range from grade four to grade six.

THEMES FROM THE GREAT OPERAS will include some standard arrangements as well as some new ones made especially by Mr. Levine for this book. The contents will represent the present day operatic repertoire with excellent pianistic versions of such favorites as: *Vesti la giubba* by Leoncavallo; the lovely *Barcarolle* from "The Tales of Hoffmann"; the lilting *Waltz* from "Faust"; *My Heart at Thy Sweet Voice*, from "Samson and Delilah"; the *Habanera* and the *Toreador's Song* from "Carmen"; and the popular *Celeste Aida* and *Triumphal Chorus* from "Aida." About one dozen different operas will be represented.

A single copy of this book may be ordered at the special Advance of Publication cash price of 40 cents, postpaid. The sale, however, is limited to U.S.A.

FINGER FUN for the Little Piano Beginner, by Myra Adler—Published in the small oblong format and engraved in large, easily read notes, FINGER FUN consists of twelve very easy finger exercises for the youngest piano beginner. Rhythmic aid is given through rhymes accompanying the music, which are also helpful in providing explanatory directions for playing and reading the notes. The exercises remain within the five finger position and are similar in style to the "Hanon" studies, although much less difficult. Both clefs are used from the beginning, and all exercises are in common time, in the Key of C. The technical problems covered include diatonic passages, repeated notes, intervals up to the fifth, and legato and staccato phrasings. Reserve a copy now at the special Advance of Publication cash price of 20 cents, postpaid, delivery to be made upon the completion of publication details.

SECOND PIANO PART—by Robert T. Benford—to Thompson's Tuneful Tasks—Many piano teachers, who value the educational advantages of having two pianos in their studios, are constantly looking for new and interesting ensemble materials. Mr. Benford's SECOND PIANO PART to JOHN THOMPSON'S TUNEFUL TASKS will prove to be another helpful teaching aid in the field of two piano literature.

The SECOND PIANO PART is written in the same grade of difficulty as are the numbers in TUNEFUL TASKS. This makes it possible for pupils to change parts thus giving additional training and opportunity for sight singing. Students will find them interesting due to the unique rhythmic and melodic characteristics, thus they will make excellent numbers for any recital program.

A single copy of the SECOND PIANO PART may be ordered at the special Advance of Publication cash price of 35 cents, postpaid. Delivery will be made as soon as the book is released from press.

TWENTY PIANO DUET TRANSCRIPTIONS OF FAVORITE HYMNS, by Clarence Kohlmann—After each group of transcriptions that Clarence Kohlmann does there is always an insistent demand for more. It is natural, therefore, that Mr. Kohlmann's phenomenally successful CONCERT TRANSCRIPTIONS OF FAVORITE HYMNS FOR PIANO SOLO, should be followed by a similar collection arranged for one piano, four hands. The contents, however, do not duplicate the solo album but offer in piano duet form another choice selection of favorite hymns, including *In the Cross of Christ I Glory*; *The King of Love My Shepherd Is*; *Nearer, My God, To Thee*; *O Perfect Love*; *Rock of Ages*; *When Morning Gilds the Skies*; and *Abide With Me*.

Mr. Kohlmann has been careful in selecting the keys to use only those in which the hymns are usually sung so that these arrangements can be used for both playing and singing. The book, therefore, has a dual purpose and represents a practical investment. It will be found useful in accompanying singing in Church or Sunday School as well as to give pleasure and enjoyment in the home.

By ordering now at the special Advance of Publication cash price of 60 cents, postpaid, you will receive a copy of this book as soon as it is published. The sale, however, is confined to the United States and its possessions.

PRACTICAL KEYBOARD MODULATION—For Class, Private, or Self Instruction, by Rob Roy Peery—That invaluable device, Modulation, more and more each year is finding its way into the accomplishments of active musicians. This is true particularly of the busy organists, pianists, and accompanists who play in public and who constantly feel the need of quick aural readjustment.

Dr. Peery's new book has been designed with a view to giving the reader a sound fundamental knowledge of quick transition from key to key. While it is not intended to be a fully comprehensive survey of the subject, it covers it in such a way as to give the student a thorough understanding of the processes involved and, through skillful application, preparation for more general benefits from his achievements. The twelve chapters, set down in uninvolved terms, present well devised discussions of such matters as the scale members, intervals, triads, dominant and diminished seventh chords, inversions, the major and minor modes, parallel keys, and modulating with a melody. There will be many musical illustrations as well as supplementary pages showing modulations to all intervals.

In advance of publication, a single copy of PRACTICAL KEYBOARD MODULATION may be ordered at the special introductory cash price of 50 cents, postpaid.

A SECOND PIANO PART—to the Fifteen Two-Part Inventions of BACH, by Ruggero Vene—No pianist's training is complete without a study of the Bach INVENTIONS. To add interest to them, we are happy to announce the forthcoming volume, SECOND PIANO PART to THE BACH FIFTEEN TWO PART INVENTIONS by Ruggero Vene. With the increasing interest in two-piano playing, this arrangement will soon establish itself as a most useful volume for the serious piano student.

In this arrangement the original *Invention* is played at the first piano. The second piano parts are faithful to the original Bach structures, and they in no way attempt to introduce new melodic or contrapuntal material, but adhere perfectly to the harmonic and rhythmic style of Bach.

These Second Piano Parts will include the original Bach music above them (in score) in small notes. They will become valuable material for the progressive piano teacher's library, as well as a delight to the professional two piano team.

While this work is in preparation, a single copy may be ordered at the special Advance of Publication cash price of 35 cents, postpaid. Delivery will be made immediately after publication.

THE CHILD HAYDN—*Childhood Days of Famous Composers*, by Lottie Ellsworth Coit and Ruth Bampton—All children love stories. THE CHILD HAYDN is a story about the boyhood of "Papa" Haydn, perhaps one of the most human of the great composers whose names are enshrined, like stars, forever, in the musical heavens. This book captures the essence and flavor of Haydn and by combining story, illustration and music, makes a three-way appeal to the child mind which is bound to enrich the imagination, broaden the horizon, and stimulate the creative urge during the formative years.

Included in the music are piano solo adaptations, in easy arrangements, of excerpts from the Gypsy Rondo; "Surprise Symphony"; Emperor's Hymn; "Clock Symphony"; and a duet arrange-

ment from the "Toy Symphony." The book also contains suggestions for dramatizing the story, directions for making a miniature stage and setting, and a listing of Haydn recordings especially suitable for children.

We suggest that when reserving your copy of THE CHILD HAYDN at the special Advance of Publication cash price of 20 cents, postpaid, you also order, if you do not already have them, THE CHILD BACH and THE CHILD MOZART. These are the first two of the "Childhood Days of Famous Composers" series and will be sent to you immediately upon receipt of the regular price of 35 cents for either one, or 70 cents for both. Delivery of THE CHILD HAYDN will be made to Advance of Publication subscribers as soon as the book comes off the press.

GEMS OF MASTERWORKS FOR THE ORGAN—with Hammond Organ Registration—Compiled and Arranged by Paul Tonner—Not so many years ago PRESSER'S TWO-STAFF ORGAN BOOK (1.00) appeared in music stores throughout the country, and, before long, the publishers and many dealers discovered that thousands of organists prefer music issued in this manner, with the pedal notes indicated on the same staff as the left hand notes of the manuals. Realizing that many of these play Hammond Organs suggested registrations for this fine instrument are given in this new book as well as the customary registration indications for standard organs, large or small.

Naturally the arrangements of these "masterworks" keep in mind the less-experienced player, but all of them have sufficient dignity to satisfy the performer in the larger churches, too. Included in the material offered are the *Andante* from the "First Symphony" by Brahms; the familiar *Prelude* in E minor by Chopin; *Interlude* by Hassler; the *Largo* from the "New World Symphony" by Dvorak; the *Prelude* from the "L'Arlesienne Suite" by Bizet—quite a variety, indeed—and selections from effective compositions of Bach, Handel, Franck, Mendelssohn, and other great composers for the organ.

There is still time this month to order a copy of this book at the special advance of publication cash price, 60 cents, postpaid. Copyright restrictions, however, confine the sale to the U.S.A. and its possessions.

ALBUM OF MARCHES FOR THE ORGAN—In the repertory of the busy church organist marches always are necessary; to the organist of fraternal societies, the performer at community gatherings, they are absolutely essential. An album of well selected marches represents a convenience and an economy to almost any organist. Probably this is why so many have taken advantage of the special advance of publication price, 60 cents, postpaid, to order copies of this new compilation.

In order to serve as many as possible a wide variety of organ marches has been chosen. In addition to marches that may be used in school and community meetings, patriotic affairs, lodge ceremonies, etc. there are many for the church organist to play at Christmas, Easter, Thanksgiving, and other church festivals, as well as for postludes throughout the year. None should prove too difficult for the average organist, and both players of the standard organ and the Hammond will find appropriate registration suggestions given with each piece.

MORE CONCERT TRANSCRIPTIONS OF FAVORITE HYMNS—For Piano, by Clarence Kohlmann—Following the unquestionable success of this author's volume of CONCERT TRANSCRIPTIONS, there were many demands for a second volume. We are pleased to announce that a second volume has been arranged and compiled by this gifted composer and arranger.

The contents of this volume includes: *Beneath the Cross of Jesus*; *Softly and Tenderly Jesus is Calling*; *Oh Love That Will Not Let Me Go*; *Lead On, O King Eternal*; *Fairest Lord Jesus*; and many other well known hymns. None of these arrangements will go beyond the pianistic abilities of the average Church or Sunday School pianist. These transcriptions have not been overly embellished or made too ornate, thus the devotional mood of each piece has been carefully preserved. The arrangements bring the melody to the fore, and are so much more attractive than the traditional four part arrangements of hymns played on the piano.

These transcriptions may be used as special music in Church or Sunday School. They are in singable keys, thus making effective accompaniments for solo or group singing.

This book is in preparation now. However, an order for one single copy will be accepted at the special Advance of Publication cash price of 45 cents.

THY GOD REIGNETH—A General Cantata for the Volunteer Choir, by Lawrence Keating—This is a non-seasonal cantata of medium difficulty for the average volunteer choir. Mr. Keating, well known for his melodic gift, especially in sacred music, has answered a need for the average choir director. After Christmas or Easter there is a gap which this splendid work can fill, and keep the interest of the choir at its highest peak.

The text which includes Scriptural passages, to be read by the pastor or a special narrator, has been selected by Elsie Duncan Yale. The musical score consists of well conceived numbers for chorus and solo voices, each number having a direct appeal to the congregation.

A single copy of this new cantata may be ordered at the special Advance of Publication cash price of 40 cents, postpaid. Delivery will be made upon release from the press.

ADVANCE OF PUBLICATION OFFER WITHDRAWN—Advance subscribers, especially piano teachers who recognize the value of Mr. Lemont's instructive materials, will welcome the announcement that his latest work now is available and that copies may be obtained from music dealers, or for examination from the publishers. This note is to announce that the special advance of publication price is withdrawn and to give a brief description of

Sixteen Short Etudes for Technic and Phrasing by Cedric Lemont, the most recent addition to Presser's "Music Mastery Series." Designed especially to supplement the third and fourth grade book of any standard graded course of piano instruction this work provides melodious practice material for the various phases of technic it is essential that the student master in these grades. There are etudes that cover scale playing, octaves, legato thirds and sixths, repeated notes, chords, arpeggios, etc. An ample amount of study material is provided for the equal development of both hands. Price, 60 cents.

"MUSIC STUDY EXALTS LIFE"

of Fascinating, Practical,
Musical Articles

ERNEST LA PRADE

WHAT SCIENCE IS DOING FOR OUR MUSICAL TOMORROW

Ernest La Prade, whose name is known to music students from coast to coast for his expert supervision of broadcasts of educational music, tells what wonders we may expect in the post-war period.

THE INSTRUMENT WITH 253 MILLION TONAL COLOR COMBINATIONS

Ethel Smith, brilliant Hammond Organ performer, tells Doron K. Antrim how she gets the effects you hear on her very popular broadcasts over the air.

WHY MANY PIANO PUPILS NEVER PASS THE FOURTH GRADE

Dr. LeRoy B. Campbell has studied this problem for years and gives readers the benefit of his knowledge in discussing a weakness which has baffled many teachers. You will find his article thought provoking.

MUSIC AND MATRIMONY

What of the great masters and their wives? In some cases there were precious romances; in others, battles royal, in which the blessed participants worked energetically, for a lifetime, against each other's interests. Dr. Paul Nettl, in graphic portrayal, gives the story in interesting fashion.

MAY DAY IN EISENACH

Dr. Guy Maier, when he was in Bach's birthplace some years ago, collected many interesting photographs which have inspired him to write a monograph about the great Thuringian master, in the style which our readers enjoy so much.

CLAUDIO MONTEVERDI

In a poll taken by the University of California of a large group of musical experts, Monteverdi ranked among the first ten great masters. Dr. Waldemar Schweisheimer, physician and musicologist, tells why Monteverdi, who was a contemporary of Shakespeare, is valued so highly, although few in this day hear his music.

CLARIFYING ELEMENTARY VIOLIN PLAYING

Samuel Gardner, who has created one of the most played compositions in the repertory of the violin, *From the Concerto*, is a well-known pedagogue in New York, and his opinions on teaching young violinists are of practical value to students and teachers.

MAY MUSIC

The music for May sparkles with springtime cleverness and freshness.

Piano Practice Game. That Is Fun

(Continued from Page 196)

two-way plug in one of the lamps for a warning light. But most impressive of all, above the piano was a huge sign which my husband had lettered, RADIO STATION JAH PRESENTS THE JIMMIE HENRY MUSICAL HOUR.

Young Jim was excited as if it were Christmas. He stepped up to the microphone and from the radio came his voice saying, "Do you use Sudsy Soap, the only soap that contains Vitamin B?" Spaced by brief commercials at the end of each fifteen-minute period, that was his most enthusiastic practice.

We had been afraid that in a few days the novelty might wear off, but that was not the case. He added brief plays to his program, and every time I went to bake I was liable to discover that he had borrowed my egg beater or pie plates to use for sound effects. One day his music lesson contained a piece imitating falling rain drops. He was delighted. "Show me how to play like the wind and like a storm," he begged his teacher. That was the beginning of his interest in music for its own sake.

He is now twelve years old. Long ago he outgrew the need for his radio game, though he still plays it sometimes. Each evening, without being told, he practices his full hour, and more. Almost top on his Christmas list this year was a request for a season's ticket to the symphony. Because his abilities lie in another direction, I doubt if he will ever use his music professionally, but I do know that as long as he lives it will beautify and enrich his life.

Rolling Her Way To Triumph

(Continued from Page 247)

School of Music where I had been employed.

"The noted pianist, Countess Helena Morsztyn, was a guest teacher at the School one summer and we became fast friends. She did much to encourage and guide me. (For the past several years I have been her secretary and business manager for her American summer classes.)

"In 1927 the Countess and I went to Italy for six months. Nearly four weeks of that time we spent at Champulac.

From my window I could see the peak of the Breithorn in the Italian Alps. I determined to get to the top of that mountain. Bound on a mule and strapped to a sack of hay as a back support, accompanied by an Italian guide and other mountain climbers, I started the ascent. My entire weight had to be steadied by my hands, but nothing is achieved without effort and suspense. My hands were very badly blistered before I reached the peak.

"When I looked out over the marvelous valleys and the cloud-draped hills, I had a sense of conquest such as I never had experienced before or since—a kind of super-exaltation that made me realize that my chains were cast off. It made me see that often one can accomplish the seemingly impossible if one has the deep desire and determination to do so and is willing to make the sacrifice. There is no stimulant such as victory over oneself and combating obstacles. No one else will secure victory for us. We must achieve it ourselves. Of course there will be blisters, but they are soon healed and forgotten when success comes.

"The victory that came with reaching the zenith of a mountain was symbolical, of course, but it helped my spirit thereafter in conducting my studio successfully for years, and at the same time doing my own housework and participating in a host of community enterprises. After all, our lives are partly wasted if we cannot expand our efforts to help others. Horace Mann, in a Commencement address at Antioch College nearly a century ago, made a memorable statement: 'Be ashamed to die until you have won some victory for humanity.'

"Remember that every victory we achieve cannot fail to be an example for others. Isn't that in itself a goal worth working for?"

The Violinist's Forum

(Continued from Page 213)

must be at the opposite side of the scroll or peg-box from which the peg enters, and that the peg must be pushed firmly into the peg-hole as it is being turned. A few minutes spent in experimenting with the different pegs will show you what fingers to use and how they should be placed, but it may be a week or two before you become accustomed to tuning this way.

Incidentally, few people are aware that in playing with the piano, greater accuracy can be obtained by tuning the G string to a low C major, chord

and then tuning the other strings from the G, than by the traditional A string tuning. The G tuning brings the A and E strings very slightly sharp in relation to the same notes on the piano, while the A tuning throws the G and D strings somewhat flat.

Easy and accurate tuning is an art, and one that is worthy of some study, for it is an aid to a good performance and starts the player off with a confidence that will help to conquer stage fright.

NEW Mailing Procedures

for Better Service to
Subscribers of THE ETUDE

With this issue and for several succeeding issues the publishers of THE ETUDE are giving trial to mailing procedures delivering subscribers' copies to them flat instead of rolled. Although numerous suggestions had been made that ETUDE be delivered unrolled because some damaged their copies in removing wrappers from rolled copies and other subscribers received rolled copies which had been crushed into creases through the weight of other mail, there had been a hesitancy about mailing copies without some wrapping protection. Of course, the use of an envelope or any other means of wrapping a flat copy meant prohibitive costs and the need of considerable time for mailing copies. The experiment being made simply utilizes a label on each copy, and every effort will be made to have the label placed so it will not mar the covers of THE ETUDE copies.

It is hoped that subscribers will feel free to let us know how this new form of mailing appeals to them, since it is the subscribers' best interests which has prompted this trial procedure of mailing THE ETUDE flat.

BACH'S HARMONIC PROGRESSIONS

(ONE THOUSAND EXAMPLES)

By KENT GANNETT

Price, \$1.00

This exhaustive treatise is an aid to students of harmony and counterpoint. The examples have been culled from Bach Chorale 371 *Vierstimmige Choralgesänge*. Each diatonic interval and each repeated note of the major and minor scale is illustrated with twenty different harmonizations. Also examples of harmonization of the chromatic scales are included. This book tells why the music of Bach has been a basis on which most of the treatises of harmony have been built. The book may be used to supplement work assigned in any standard text on harmony or counterpoint. Students may use this as a guide in knowing how to harmonize doubtful passages in theory work. Bach is still the great master of all times and music students will do well to acquaint themselves with this valuable guide to his writings.

(Published by O. D. Co.)

TWENTY CHORALES

(Also a CHORALE
PRELUDE & a
FUGUE)

By J. S. BACH

Arranged and Edited by
OSBOURNE MCCON-
ATHY, RUSSELL V.
MORGAN and
HARRY F. CLARKE

For Use in the School
and Community
Instrumental Ensemble

This volume is arranged according to the A-B-C-D Plan and can be used with every possible type of instrumental ensemble imaginable. A classification places instruments under the following groups:

A. Soprano
B. Alto
C. Tenor
D. Bass

Community, school, and home groups will find this collection valuable in developing perfect ensemble and cultivating a taste for good music.

Conductor's Book—
Price, 75 cents

Parts—
Price, 50 cents Each

(Published by O. D. Co.)

SIXTY CHORALES

Harmonized by J. S. BACH
SELECTED and EDITED
by PERCY GOETSCHUIS

(Mus. Doc.)

This collection of Chorales stately, plain and ascetic and so keeping with their sacred associations is inseparably connected and identified with the German Protestant Church. Choral directors will appreciate the splendid arrangement of these works in which the original style has been so carefully preserved.

Price, 75 cents

(Published by O. D. Co.)

THIRTY CHORALES

Harmonized by J. S. BACH
Arranged for MEN'S VOICES
by PERCY GOETSCHUIS

(Mus. Doc.)

A highly successful presentation of Bach Chorales (originally for mixed voices) arranged for men's choir. Dr. Goetschuis has secured effective tonal balance and preserved Bach's original voice progression.

Price, 60 cents

(Published by O. D. Co.)

FIFTEEN TWO-VOICE INVENTIONS

(Bach-Busoni)

English Translations
by LOIS and GUY MAIER

The new, up-to-date translations of the text matter, as prepared by Lois and Guy Maier, place new emphases on features of interpretation.

Price, 60 cents

THE PASSION

ACCORDING TO ST. MATTHEW

ORATORIO FOR CHOIR OF MIXED VOICES
with SOLOISTS

By J. S. BACH

This fine edition of the *St. Matthew Passion* has been prepared with a clear interpretation of the composer's thoughts in mind. Revised and edited by the distinguished choral authority, Louis Koemenich, it is here given in its entirety, with suggestions for "cuts" where shorter performances are desired.

Price, \$1.50

(Published by O. D. Co.)

PIANO COMPOSITIONS

By J. S. BACH

Edited by EBENEZER PROUT

TWO VOLS.

(Ditson's Musicians' Library)

Very few authentic editions of Bach exist; this is especially true since the beginning of the present war. Bach enthusiasts who accept only editions based on manuscripts which Bach himself edited and corrected, will undoubtedly want to study these two volumes. Of the three most authentic editions of Bach, this is the only one printed in America, thus making it quite accessible to those desiring best editions. Detailed analysis of ornaments and notation as well as a descriptive analysis of each work is included in these books.

Volume 1—SHORTER COMPOSITIONS

Included are the Little Preludes, selected movements from Suites, several complete Suites and selected Two and Three Part Inventions.

Volume 2—LARGER COMPOSITIONS

Selected English Suites, Partitas, Toccatas, Fantasias, Italian Concerto, Chromatic Fantasia and Fugue and other works.

Price of Each Volume, \$2.50

(Published by O. D. Co.)

BACH ALBUM FOR PIANO

Compiled by THEODORE PRESSER

An album of twenty-four favorite compositions of medium grade. Besides a full page portrait of the composer, it also includes two pages of biographical data, and notes on the dances of Bach's time.

Price, 75 cents

(Published by T. P. Co.)

TWELVE PRELUDES

FOR PIANO

From "WELL-TEMPERED CLAV." Vol. 1

By J. S. BACH

Compiled by ORVILLE A. LINDQUIST

This collection selected by a prominent Bach authority is valuable teaching material. The Preludes in this volume represent some of Bach's most colorful, most pianistic, most modern, and most beautiful music.

Price, 60 cents

(Published by T. P. Co.)

THE FIRST STUDY OF BACH

SEL. & ED. by M. LEEFSON

Early grade compositions of Bach arranged in progressive order. A valuable instruction book to clarify the problems of polyphonic playing.

Price, 60 cents (Pub. by T. P. Co.)

THE LITURGICAL YEAR

(FORTY-FIVE ORGAN CHORALS)

ED. by ALBERT RIEMENSCHNEIDER

By J. S. BACH

Price, \$2.25

This book contains forty-five chorales which Bach wrote for different occasions throughout the Church year. This set is known in America as the Liturgical Year. The type of chorale found here is the simplest in which Bach cast the form of his Choral Prelude. The melody is treated simply without episode between verse line. With two exceptions the melody appears in the soprano in all the Preludes of this collection. This is a work edited in the true Bach tradition. Serious Bach students cannot afford to neglect a comprehensive study of this work, which represents a knowledge of Bach as a man and a musician.

(Published by O. D. Co.)

THE ORGAN STUDENT'S BACH

TWENTY-THREE
ORGAN COMPOSITIONS

By J. S. BACH

Edited by J. H. ROGERS

While primarily intended for instructional purposes, organists will find the contents of this attractive and comparatively little known material suitable for church and recital work. The compositions included are technically within the grasp of the organist's earlier years of development, and consist of some of the most beautiful chorals and Preludes in all Bach's music. The editor gives a practical registration for an organ of moderate size.

Price, \$1.75

(Published by O. D. Co.)

EIGHT LITTLE PRELUDES & FUGUES FOR ORGAN

By J. S. BACH

Edited by J. H. ROGERS

The editor offers suggestions helpful to the organ student in forming a musical concept of these interesting pieces. Each number contains variety and an attractive flow of melody and counterpoint.

Price, \$1.00

(Pub. by O. D. Co.)

SIX ORGAN CHORALS

(SCHÜBLER)

By J. S. BACH

Edited by ALBERT
RIEMENSCHNEIDER

Edited by an eminent Bach authority. Taken from the original forms, this edition is based on authentic information never before utilized in applying the known basis of Bach's phrasing. Each chorale is presented in three versions. The first is a four-part harmonization with the original words included. The second version presents the chorale in pure text with the use of alto and tenor clefs, thus giving the organist practice in playing from the old clefs. The pure text is based on the original edition issued in 1747 under Bach's direction. The third version is a translation of the pure text to modern clefs and notation.

Price, \$1.50

(Published by O. D. Co.)

THE CHILD BACH

(CHILDHOOD DAYS OF
FAMOUS COMPOSERS
SERIES)

By

LOTTIE ELLSWORTH COIT
and RUTH BAMPTON

Some of Bach's famous pieces edited in simplified arrangements to develop in children a deep and abiding love for music of this master. A correlation of music, story, and picture. Included are directions for building a miniature stage. Can be used as a musical playlet.

Price, 35 cents

(Published by T. P. Co.)
